Suddenly, she felt desolated, aware of how far from home she was, no longer excited but faintly frightened by the thought of what she might have let herself in for. Contrary to what she had just said, that unnatural storm had shaken her badly, emerging, as it had, out of a perfectly clear sky and then fading away as abruptly as it had arrived. No, not a natural storm – and it had affected her strangely, setting her imagination free and putting fear in her heart.
‘If you think it’s ridiculous,’ Antonio said over his shoulder, ‘then why, knowing what he’s come here for, have you made this trip with Alex?’
‘Because I love him,’ Avril replied without hesitation. ‘Because I’m worried about his mental health. Because I believe he has to face up to his past, no matter how unpleasant, before he can even hope to be cured of his recurrent

nightmares.'
'And do you think those nightmares are natural, Avril?'
'I certainly don't think they're supernatural. I think they're caused by something Alex has refused to face, and that sooner or later he'll have to face whatever it is or break down completely.'
'*Please*, Avril,' Alex said. 'I can do without that kind of talk, particularly when I'm sitting right here beside you.'
'You'd rather I said it behind your back?'
'No, but – '
'You're a level-headed young lady,' Antonio interjected, still speaking over his shoulder as he drove the car, keeping his eyes on the road. 'So tell me: what do you think it is that Alex has refused to face? Do you mean the death of his father or something concerning Laura Wellman?'
'One or the other,' Avril replied, looking out at the dark sky, seeing fireworks exploding under the stars as the celebrations optimistically started up again. 'And then again, maybe both. Alex is being tormented by something in his mind: something he deliberately buried because it was too much to bear. And until he finds out what it is and then faces it fully, he's going to continue having his nightmares.'
'I'm hiding nothing,' Alex said firmly. 'What I told you is what I know. I can only know what I experienced personally and none of that's been forgotten. No, I'm not hiding anything, nor being driven mad with guilt: my nightmares are exactly the same ones that Laura had, and they've driven me back here for some at yet unknown purpose. I dream about the Yano, about the lights that rise and fall, about a conflict between good and evil where time and space have no meaning. I'm caught up in that conflict, I'm at the centre, but I don't quite know how.'
'No,' Avril said, 'I can't accept that at all. I believe in flesh and bone, in what I can see and touch; I do *not* believe in forces of good and evil, nor in life after death. We *create* good and evil by the manner in which we live; we create them through the things that we do. You're not being haunted, Alex: you're just tormenting yourself. You're having the same dreams as Laura Wellman because you're still obsessed with her.'
There was a brief, uneasy silence as Alex digested her words, but eventually he managed to look at her, his gaze candid with hurt.
'You think I still love Laura?' he asked quietly.

His obvious hurt filled her with guilt, making her spin within herself, thinking back to the streets of London, the ruins of war around both of them, her love for him changing her whole life. She had been drawn to his remoteness, his air of weary maturity, to the realization that he was open to tenderness and love's delicate nuances. Now she saw all that again, in the muted pain of his crystal gaze, and she wanted to fall into his arms and set him free with her body.

'Yes,' she heard her own voice say reluctantly, 'I think that might be the case.'

'It's not true, Avril. You know what I feel for you. I've loved you from the moment I met you – and I love you right now.'

'And Laura? What about your love for her? Didn't you love her the same way you now profess to love me?'

'No, Avril, I didn't. I thought I did, but it wasn't true. I was totally innocent when I met Laura, more innocent than you can imagine, and so, when she entered my life, the most glamorous creature I'd ever seen, I completely lost my head over her and made a fool of myself. That isn't real love, Avril; it's romantic obsession. It was very different from what I feel for you and couldn't possibly have lasted. What I felt for her was painful and confusing and tormenting

– but loving you isn't a torment: it's my one hope for peace.'

It was a beautiful thing to say and it made Avril feel even more guilty, bringing a blush to her cheeks and quickening her heartbeat. She glanced out of the car, saw the dark and grim dock area, wondered what Antonio was taking them to see, and then looked back at Alex. He seemed frail and exhausted, slumped weakly beside her, his eyes scanning the shabby structures of Praca Maua as they slid past in silence.

Why had she said that to Alex? Was she really that jealous of Laura Wellman? Did the ghost of that woman now haunt her as it clearly did Alex? Avril was ashamed to even think about it, feeling betrayed by her own vanity, and she reached out, suddenly shaken by emotion, to take hold of his hand. He quivered when she touched him, as if shocked by human contact, but then, obviously gratified to have it, took hold of her fingers.

'Believe me,' he said, 'I love you.'

'I know,' she said. 'I believe it. It's just that sometimes I feel as if that woman is breathing over my shoulder.'

‘Maybe she is.’
The car was slowing down, passing more warehouses, the lights of the boats in the bay twinkling brightly between them. This was a different Rio, neither beautiful nor friendly, the streets dilapidated and desolate, lamps beaming over the *churrascarias*, music filtering out of the rough bars, sailors moving in and out of the shadows in which their women were standing. *Prostitutes*, Avril thought, and was slightly shocked at the idea, even though she had seen it all in the streets of London during the war. She kept looking, fascinated, feeling very far from home, and then Antonio braked to a halt. Stopping the car in front of an enormous warehouse, he turned the headlights off, killed the engine and glanced back over his shoulder.
‘Okay,’ he said. ‘This is where I wanted to take you. I’m still not sure that I’m doing the right thing, but feel that I have to take a chance. We’re going into that warehouse. Once inside, you must stick close to me and neither say nor do anything out of place. What you’ll see are forbidden practices, so strangers aren’t normally welcome, but they know me and won’t bother you two as long as you’re with me.’
‘Voodoo practices?’
‘Yes, Alex, that’s right.’
‘Why are you showing us voodoo, Antonio? It has no relevance to what happened in the Amazon.’
‘No more questions, my young friend. Just let me show you. First you’ll see what you will and then you can do what you want. Now come on, let’s go inside.’
After getting out of the car, Antonio opened the rear door for Avril. As she stepped out into the street, she heard music and shouting emanating in a ghostly manner from inside the warehouse. The road was dark and empty, devoid of any kind of lighting, containing nothing but other warehouses and derelict buildings. She shivered, feeling nervous, despising herself for it, and then turned around as Alex stepped up to her and took hold of her hand.
‘Are you all right?’ he asked her.
‘Yes,’ she replied, ‘I’m fine.’
‘You’re in for a bit of an experience, but don’t worry about it.’
There was a harsh, metallic squeaking as Antonio opened the large steel door, then stepped aside and indicated that they should enter. Avril went in first, feeling Alex’s hands on her waist, and the noise she had heard from outside,

the frantic, percussive music and shouting, exploded from the interior of the warehouse and beat at her temples. Smoke and incense stung her eyes, making her rub them and blink repeatedly, then, becoming accustomed to it, she started looking around, feeling, as she did so, Alex's hands gently pushing her forward.

Antonio had moved in front of her, leading the way, and she saw the back of his head moving through a sea of faces, smoke from joss sticks and burning torches swirling above the milling people, brown, black and mulatto, their eyes dazed or closed in ecstasy, the whole mass forming a circle around the central area towards which Antonio, occasionally glancing back over his shoulder, was making slow progress. The drumming was demoniac, polyrhythms of hypnotic intensity, and the people surrounding her, men and women of all ages, some wearing ordinary clothing, others in flowing white robes, were swaying to and fro and gyrating wildly, shaking as if with fever, most leaning toward the drummers and voodoo mediums in the smoke-wreathed clearing in the middle of the building.

Antonio broke through to the clearing, pushing the onlookers aside, tugging Avril forward even as Alex gently pushed her from behind, and then, when he had reached his chosen position, stopping beside her. Avril rubbed her eyes again, wiping the stinging tears away, and stared through the dense smoke at the cleared central area in front of which the drummers were playing frenziedly, the mediums were chanting their invocations, and the acolytes, some foaming at the mouth, were writhing like epileptics on the concrete floor. One of the men was dancing dramatically, burning himself with a flaming torch, while another, barefooted, was dancing on shards of broken glass, and a third, his head thrown back as he shrieked dementedly, was slicing himself with a knife, the blood flowing freely down his chest and soaking his trousers.

'Are they drugged?' Avril asked.

'Some of them,' Antonio said. 'Most of them are simply in a self-induced trance, but some of them are indeed on drugs, particularly the hallucinogenic drug *epena*, widely used by the Indians.'

'Why did you bring us here?' Alex asked stubbornly.

'Here he comes,' Antonio said.

The crowd roared and parted, forming a pathway to the cleared area, and into it came two bare-chested mulatto mediums, each holding the elbow of a man

who was half-walking, half-staggering between them, his eyes closed, his head hanging low. Obviously drugged, conscious, though barely so, he was practically dragged to the centre of the cleared area and placed without ceremony on a rickety wooden chair. He was wearing a white shirt and grey slacks, his bare feet in leather thongs, and he just slumped there, his head hanging, his chin resting on his chest, while the mediums set a small table in front of him and then, all the time dancing ecstatically, placed a long wooden box on the table and opened its lid.

The frenzied drumming continued, blue smoke swirling through the air, people swayed to and fro, back and forth, and clapped hands to the hypnotic rhythm of the drums, and babbled incoherently and cried out. The noise and frantic activity got through to Avril, hurting her head, making her heartbeat quicken, and she held Alex's hand even tighter, as if frightened of losing him in the chaos.

He was staring straight ahead, squinting into the streaming smoke, his brow furrowed as he concentrated on the man who was slumped on the chair. The man was still at the table, behind the coffinshaped box, and as Avril looked at him and, with a shiver, saw the emerging heads of two large, swaying snakes, the man raised his own head, his shock of white hair jumping electrically, and seemed to stare directly at her through the dense, swirling smoke.

She was shocked to see that the man was a European, once handsome, now seemingly old and ill, his untidy white hair falling over his wrinkled forehead, his eyes bloodshot and dazed, with dark bags under them and numerous lines around them, his cheeks sunken and his skin deathly pale, his lips, which once might have been sensual, now trembling helplessly.

'Oh, my God!' she heard Alex exclaiming beside her. '*That's Father Benedict!*'

Even as Alex uttered those words, his voice strangled with shock, the two giant pythons, which had been emerging from the long box on the table, rose higher and swayed seductively in front of the priest's glazed, haunted eyes. They curled over his shoulders, wrapped themselves around his shivering body, and he merely shook his head from side to side while tears rolled down his cheeks. Yes, an old man – not the man she had been told about – and when she turned away, horrified (as much by the sight of him as by the snakes coiling around him), she saw that Alex was close to tears.

'Father Benedict!' he whispered in a daze. 'Oh, dear God, it *can't* be!'

At that moment, as the snakes were tightening dangerously around him, the priest opened his eyes wide, stared up at the high ceiling of the warehouse, and in a manner reminiscent of the excited voodoo mediums at both sides of him, let out a high, demented wailing that made Avril feel whiplashed. He then shook his head wildly from side to side, beads of sweat flying off him, his whole body shivering in the deadly grip of the tightening snakes as the drummers behind him went frantic, the smoke swirled more densely about him, the onlookers whooped and shrieked and released strident lamentations, their hands raised above their heads, their bodies jerking epileptically. Then the mediums beside the priest, as if sensing that he was on the verge of death, spat out a stream of gibberish, grabbed the snakes with their bare hands, and the reptiles, not resisting, were pulled away from their shuddering victim. As he sobbed and slumped forward in his chair, the snakes coiled around the sweating arms of the mediums who placed them back in the oblong box.
Alex suddenly rushed forward, letting out a choked sob, pushing the Indians aside and grabbing hold of Father Benedict while Antonio, shouting over the bedlam, hurried up to help him. There was a brief and noisy commotion, lots of tugging and pushing, but then Antonio shouted again, directing his words at the excited Indians, and they reluctantly moved away, letting Alex break free with the babbling priest and, supporting his old friend, with Antonio pushing them from behind, awkwardly weave his way back to Avril.
'Let's get out of here!' Antonio bawled.
The priest looked up in a daze, mumbling incoherent words, and Avril was again shocked at how old he seemed to be when seen this close up. More than old: wrecked, his blinking eyes filled with despair, moving left to right in pitiful confusion, his frail body trembling. This was not the Father Benedict about whom Avril had heard so much (that handsome man with silvery-streaked black hair and a robust physique), but another, much older and broken man who now, as he moved his weeping eyes in all directions, finally managed to focus upon her to offer a humourless smile.
'A testing,' he said, slurring his words. 'To challenge death and survive it. To be embraced by the symbols of the powers of darkness and not feel their crushing strength…' His voice trailed off as he nodded, his head rising and falling sleepily, before his eyes opened fully again and focused upon her. '*In the end it will bite like a snake,*' he croaked hoarsely, '*and will spread abroad poison like a basilisk. Thy eyes shall behold strange women, and thy*

heart shall utter perverse things. And thou shalt be as one sleepless in the midst of the sea, and as a pilot fast asleep when the stern is lost.'
Avril thought of the snakes and shivered, trying to still her racing heart, but then Antonio, helping Alex to support the mumbling priest, led them all back through the crazed crowd, through the dense smoke and the sweet smell of incense and *epena*, away from the ferocious polyrhythms of the drummers and out of the warehouse. The slamming door cut off the music, or at least muffled its demonic clamour, and the fresh air, wafting in from the bay, was cool and soothing.
Father Benedict was still mumbling, hanging between Alex and Antonio, the former wiping tears from his eyes with his free hand, the latter using his own free hand to open the car's rear door. Managing to do this eventually, he eased the priest onto the back seat.
'I thought you should see for yourself,' Antonio said to Alex, 'but perhaps I was wrong.'
'No,' Alex said, 'you were right to show me. But what *happened* to him?'
Antonio raised both his hands in a familiar gesture of defeat, his smile touched with sadness. 'As you know,' he said, 'Father Benedict was extremely disturbed by the murder of your father and the disappearance of Miss Wellman. He was, I think, particularly shaken by his own conviction that he, as the local priest, should have been able to do something to prevent that situation exploding as it did, that he should have taken firmer action when the *seringueiro* died because of your father's mistreatment, and that he should definitely have done something when your father took the *seringueiro's* daughter into his house as repayment for the so-called debts of her dead father. So, the priest felt very, very guilty over what had occurred because of what he assumed was his personal negligence.'
Looking into the car, Avril saw the priest on the back seat, shoulders slumped, his chin on his chest as he slept off his stupor. *It will bite like a snake… Thy eyes shall behold strange women…* She thought of the snakes tightening around the priest, of that enigmatic woman, Laura Wellman, and wondered again just what she had let herself in for when she had encouraged Alex to make this return trip and agreed to come with him. Right now, Alex was leaning against the car, giving his attention to Antonio, both of them painted in black shadow and pale lines of moonlight.
'Anyway,' Antonio continued, 'from the day of the murders and the

American woman's disappearance, Father Benedict became a changed man: drinking a lot, it was said, and also studying the occult practices of the Indians. Certainly, shortly after we closed down the plantation for good and you, Alex, took the boat to England, he was extremely depressed, usually drunk, and gradually became something of a recluse, ignoring even his work with the mission and the local Indians, and often disappearing for days, returning from Manaus reeking of drink. Of course the locals talked – you know how news travels quickly in that area – and it was said that the priest was taking an interest in Indian magic, that he was sniffing *epena* on a regular basis, that he'd been seen in certain villages he didn't normally attend to, and that he was, in general, very much a changed man who, if he was showing an uncommon interest in Indian magic, was simultaneously ignoring the Christian Indians of his mission in an equally uncommon manner. Then, a month ago, he disappeared completely, leaving the mission unattended, leaving no clue to his whereabouts, and only yesterday, when I came to Rio to prepare for your arrival, did I learn that he'd moved into a *favela*, that he was either drunk or drugged most of the time, and that he'd started involving himself in dangerous black magic rituals of the kind you witnessed here today.'
'But why?' Alex asked, then repeated, 'What *happened* to him?'

'Father Benedict, your Christian friend, is destroying himself in an unusual manner, most notably by flirting with a particular form of Indian witchcraft that's far beyond anything known to *Umbanda* or *Quimbanda*, but is close to the most dangerous forms of black magic – the kind that was once practised by the Yanoama Indians and is now, reportedly, the sole province of their cast-out brothers, the Yano. Whether or not this has something to do with your father's murder and Laura Wellman's disappearance is for you to decide, but right now I think we should take him home and put him to bed.'

'You mean the mission?'
'No, I mean the *favela* he's been staying in. I don't think he'd want to waken up anywhere else – and, sad to say, after he'd disappeared for a month, his superiors in Australia decided to close down his mission. The mission – and, in a sense, Father Benedict's whole life, is gone for all time.'
'Not his life,' Alex said fervently. 'We can give that back to him.'

‘Maybe we can,’ Antonio said, ‘and then again, maybe not. But for now, let’s get him back to his new home.’

Chapter Three

The drive back through the city seemed unreal to Avril, the darkness, the fireworks, the distant music, the stars glittering above the black hills, all combining to make her feel that she was dreaming and losing touch with herself. The dreaming was couched in fear, but the fear was coloured by magic: the clouds crossing a pale moon, *Pao de Acucar* glimpsed fitfully, Christ the Redeemer, arms outstretched, surveying the city from Corcovado, lamplight and starlight on his head, a crimson glow bleeding over him. Avril shivered, feeling cold, perhaps just convincing herself that the shivering came from the cold, and turned her head to look at the priest slumped between her and Alex. She saw an old man, whitehaired, his face lined, body frail, and could not imagine him as being the same man that Alex had so often described.

Only four years ago, in 1943, Father Benedict had been in New Guinea, serving with the Australian Army, advancing with the troops along the bloody Kokoda Trail and, according to Alex, witnessing some appalling atrocities. His faith in God, never strong, had apparently wavered badly then, bending before the realization that man’s worst actions could be part of God’s great plan. Nothing had been secure after that, the scales tilting against his faith, but at least, according to Alex, he had been a handsome, well-built man of considerable charm; not this old man, this beaten thing, this frail, snoring creature, now propped up between herself and Alex as the deserted streets of the city slid past.

Glancing at Alex, also haunted, also frail from the lack of peace, her pragmatism, drilled into her from childhood, dissolved and drained out of her. Her own father had been an agnostic, a good-humoured, sardonic realist, teaching her that man had come from dust and to dust would return. Yes, she had believed that and had lived contentedly with it, but now, looking out, seeing the hilly streets of Botafogo, she realized that her own belief in the material world was likewise starting to waver before unnatural and

supernatural events, buffeted in the winds of experiences that appeared to have no rational explanation.

She shivered, again feeling cold, and was relieved when the bricabrac streets of Botafogo gave way to the shacks of the enormous favela she had seen earlier as a sea of soothing yellow lights on a soaring black hill.

'He stays here?' Alex asked.
'Yes,' Antonio said. 'He couldn't have picked a worse place if he'd tried, but he found what he wanted.'
'Penance?'
'Yes, a form of penance – but not that alone. This *favela* is renowned not only for its poverty, but for its large proportion of pure Indians and black magic worshippers. Why black magic instead of white, I don't know, but that's why he's here.'
Avril looked out and was appalled, seeing true poverty exemplified, the shacks numbering in their thousands, raised on stilts on the steep slopes, rising up in long tiers and perched over one another and disappearing over the crest of the high hill to run down the far side of it. Walls of tin and plywood, roofs of cardboard and corrugated iron, holes stuffed up with newspapers and broken bricks and stones, the ground around them made of hard earth and strewn with litter. Candles still burned on the verandas and in the tiny rooms inside, and a surprising number of the inhabitants, most dark-skinned, all wearing rags, were still awake and either resting on their porches or idling between the leaning shacks. A bleak, depressing sight, it was also quite frightening, and Avril, when the car ground to a halt, stepped out feeling nervous.
'You're having a night of rare experiences,' Antonio said, smiling reassuringly at her. 'Very few visitors to Rio see what you're seeing and certainly very few could come here and go back in one piece.'
'You're known here?'
'Yes, I'm known here… and so is the priest. They let him stay here because he *is* a priest – and because they think he's harmlessly crazy.'
'Maybe they're right,' Avril said.
'We're *all* crazy,' Antonio retorted, grinning.
Alex had slipped out the other side of the car and was walking around it to

help Father Benedict. He glanced at Avril and smiled, but seemed a million miles away, as if returning to Brazil, to the events that had broken his spirit, had driven him deeper into himself and even farther away from her. Tugging repeatedly at the priest's shirtsleeve, he eventually, after considerable difficulty, managed to awaken him and encourage him out. The priest swayed groggily, placed a hand on Alex's shoulder, stared at him as if not recognizing him and then glanced vaguely around him.

'What?' he said. 'Where?' Obviously still dazed, he shook his head from side to side and rubbed his bloodshot eyes. 'God,' he mumbled. 'Need a drink.'

'Father Benedict – ' Alex began.

'What?' the priest interjected irritably, his voice hoarse and tremulous, and then, pushing Alex aside, he took a tentative step forward. 'Throat's as dry as a camel's arse,' he said.

Alex was near to tears, but stepped back to let the priest pass, watching him as he inched forward a few paces and then stopped again, coughing into his fist, shaking his head, and glancing around him once more. The favela was quiet and eerie, lit mainly by flickering oil lamps or candles, and some of the residents had come up to stare at them with curious, unfriendly eyes.

Approaching the priest, Antonio took hold of his elbow, coaxing him towards the shack straight ahead and whispering soothing words to him. Together they went up the wooden steps, the priest mumbling incoherently, and eventually, when they had gone through the open doorway, Avril and Alex followed them inside.

It was a small, one-room shack, the plank floors covered in dust, the single table littered with empty beer bottles and opened tins of food and dirty dishes, unwashed clothing scattered haphazardly on hardback chairs and on the floor, the whole place smelling of stale *caipirinha*, incense and stale cigarette smoke.

Already the priest was at the table, irritably scattering the empty bottles, cursing because he couldn't find something to drink and rubbing his eyes repeatedly even though the room was already lit by the light of an oil lamp. Finally, he found a half full bottle of beer and slumped into a chair, had a drink, rested the bottle on one thigh and then stared blearily at each of them in turn.

First he looked at Avril, his brow furrowed in puzzlement, then nodded his head in a dreamy manner and offered a slight smile, obviously vaguely

recalling her from the warehouse. He had another drink of his beer, wiped his lips with a shaky hand, then eventually opened his eyes wider in surprised recognition.
‘Antonio!’ he exclaimed.
‘Yes, Father.’
‘Ah, Antonio, Antonio, my old friend, what brings you here?’
‘I brought Alex,’ Antonio replied.
There was a lingering silence as the priest took in this news, first staring at Antonio with an air of complete bewilderment, then letting his weary gaze roam across to Avril, and finally, with visible reluctance, a fresh alertness riding on pain, looking through the flickering light from the oil lamp at the silent, clearly shocked, Alex.
‘Oh, my God,’ Alex murmured.
Avril reached out and took hold of his hand, squeezing it reassuringly as the priest, staring at him as if not believing his own eyes, eventually shook his head from side to side and started to weep.
‘No,’ he whispered. ‘No! Oh, Antonio, why did you do this?’ He stared again at Alex, as if to confirm what he was seeing, then shivered, sat up in his chair and tried to sniff back his tears. ‘Alex!’ he exclaimed. ‘My young friend! Oh, dear God! Why did you come back to this hellish place?’
‘To find Laura Wellman,’ Alex said.
The priest shuddered at the mere mention of her name, drank some beer and licked his lips, sniffed and wiped his weeping eyes, then shook his head from side to side again.
‘How foolish,’ he said. ‘How very foolish to come back here for that. Almost certainly that unfortunate woman was seduced by Peruche’s occult powers, led by him into the depths of the rainforest, and there was captured, and probably killed, by the barbaric Yano Indians. Laura Wellman is dead, my son.’
‘She isn’t necessarily dead,’ Alex said.
‘She’s *dead*,’ the priest insisted.
He had said it with such vehemence that Avril was startled and automatically held Alex’s hand tighter, feeling the shock jolting through him, too. Turning her head, she saw his face, his remarkable, indefinable beauty, the golden-blond hair flopping over his clear blue eyes to hide the pain he was undoubtedly suffering. He was staring down at the seated priest as if seeing

him for the first time, or as if, in seeing this ghost of his former friend, he was too shocked to say anything. Then he, too, visibly shuddered and removed his hand from Avril's fingers, moving away from her to go down on one knee just in front of Father Benedict.

The priest refused to meet his gaze, but Alex reached up with his left hand, cupped it under his old friend's unshaven chin and very gently turned that wasted face towards him, almost like a father with his son, reversing their original roles. The priest, his chin resting in Alex's hand, stared down at him, fearfully.

'What happened to you, Father Benedict?' Alex asked. 'And what are you doing here?'

The priest looked fearful and pained, perhaps even ashamed, until eventually the tears rolled down his cheeks and settled on the back of Alex's hand.

'Your father's dead,' he said, 'and doubtless Laura Wellman's dead as well… And I hold myself responsible for what happened.'

'It wasn't your fault,' Alex said.

'It was, Alex, it was. I let the situation build up until it exploded. I should never have let your father get away with what he was doing, but I did, doubtless out of cowardice, and look what it led to. Yes, it was my responsibility – and that's why I'm here.'

'And what do you hope to do here?'

'Find oblivion.'

'Not quite true, priest,' Antonio said. He had stepped out of the shadows near the flickering oil lamp and was now staring levelly at the priest, his hands on his fleshy hips. 'Is it not true, Father Benedict, that you're also involving yourself regularly in the kind of voodoo practices we all witnessed this evening? And that you are, in truth, growing obsessed with Indian witchcraft?'

The priest instantly looked defensive, huddling up into himself. 'No!' he exclaimed. 'No! That's not true! Tonight was just…' He drank some beer and wiped his lips with a shaky hand. 'Just something that happened… a stupid accident of drunkenness.'

'An *accident*, Father Benedict? Mere drunkenness, you call it? No mere drunkard could walk accidentally into such an event, let alone take part in it. No, my good friend, you weren't drunk: you were practising voodoo. A willing participant in voodoo rituals.'

‘No! That’s not true!’ Sounding panic-stricken, the priest jerked his chin out of Alex’s hand to drink some more beer. ‘No!’ he repeated, wiping his lips with the back of that shaky hand. ‘What you say is all nonsense!’
‘No, priest, not nonsense. You know damned well what you’re doing. This is the shack of a *Quimbanda*, a black magic medium, and what we see here on the walls and on that table are the tools of his trade: that small altar, those effigies, the incense, this bowl of *epena*, the various statues and amulets. Admit it, Father Benedict, you’re flirting with voodoo of the most dangerous kind.’
‘No! Oh, God, no!’ The priest almost shrieked the words as he twisted away from them, bending forward and covering his face with his hands, his body trembling as he sobbed uncontrollably, with a hurt child’s grief. He looked lost and pitiful, the yellow light flickering over him, and Avril, awash in an equally uninhibited pity, could bear to look at him no longer and instead found herself staring down at the table beside her, gradually focusing on an amulet that lay there covered in dust.
-*Alex*, it said to her.
Blinking, shaking her head to clear it, wondering if she was hearing things, she impulsively picked up the amulet to examine it closely. It was the size of a large coin, made of black stone, featureless, and yet, as she studied it, as she concentrated on it, the priest’s sobbing faded away, the surrounding walls fled from her consciousness, her thoughts seemed to congeal into a single incandescent moment, and she felt the power entering her, unrecognizable yet oddly familiar, a power that flowed like an electric current, seemingly from Alex, and then poured into her quivering body to make her skin burn.
Dazed, slightly dizzy, losing touch with her normal senses, she tied the string of the amulet around her neck and let it rest on her throat. Then Alex was there in front of her, unusually intense, and he reached out to take the amulet in his right hand and study it closely. Apparently satisfied, if clearly shaken, he let the amulet slip back through his fingers and rest, with the coolness of cut glass, once more on her warm skin.
‘What is it?’ she asked him, feeling as if she was dreaming, her own voice echoing ethereally in her head, then fading away into silence.
‘It’s mine,’ Alex replied. ‘Old Peruche gave it to me. It was supposed to be a sacred amulet that would ward off evil spirits and endow me with occult powers. I gave it to Laura shortly before all the troubles began.’ He turned

back to face the priest, whose rheumy, bloodshot eyes were filled with guilt and denial. ‘I gave that amulet to Laura Wellman,’ Alex said sternly, ‘so how did you get it?’

‘I didn’t steal it!’ the priest exclaimed. ‘And I didn’t get it from Laura! I found it in the main room of the house, just before the plantation was closed down. It was lying there on the floor, in all that dust and rubbish, so I just picked it up and kept it. I swear to you, Alex, that’s the truth. *I did not get the amulet from Laura!*’

He stared at each of them in turn, his eyes wide and glazed, and then buried his face in his hands and, resting his elbows on his knees, started sobbing again, his frail body wracked by recurrent spasms and uncontrollable shivering. He was close to a breakdown, his despair too much to bear, and Alex, obviously aware of this fact, again dropped to one knee, grabbed the priest by both shoulders and vigorously shook him again.

‘You’re coming with us,’ he said. ‘You can’t stay here, Father. I won’t let you destroy yourself this way, so you’ll do as I say. This has gone on long enough. I won’t let it continue. You’ll come with us to our hotel, spend the night with us, and then, tomorrow morning, when you’ve had a good sleep, we’ll decide what to do about this business. Do you understand, Father Benedict? *Do you hear what I’m saying?*’

‘Yes, yes, I’m listening! But I can’t do it, Alex! Why did you come back to torment me with this? I can’t do it! *I can’t!*’

Avril found herself stepping forward, moved by a mysterious impulse, and then was pushing Alex aside and standing over the quivering priest, bending slightly towards him. She felt that strange power – Alex’s power, a mesmeric force – flowing out of him and leaving him drained as it charged her with magical strength. Her own arrogance shocked her, her selfawareness overwhelming her, but she reached down, placed her hands on the priest’s shoulders, and then squeezed them gently.

‘Please, Father Benedict,’ she said, ‘do as Alex asks of you.’

The priest stared up at her, startled, his eyes wild with grief and fear, and then fixed his gaze on the amulet that lay on her throat. He kept staring at the black stone, drawn to it and into it, nervously licking his lips as his body’s trembling lessened. Avril squeezed his shoulders again, letting her essence pour down into him, a great compassion, perhaps Alex’s abiding love, giving back to the emptied cavern of the priest’s spirit a certain measure of hope.

She hardly knew what she was doing, but felt quietly, supremely confident, and as she gazed upon him and saw his pain in that flickering light, she felt bound to him by affection and understanding, her new faith like a rock.
The priest's violent trembling ceased and for a moment he stopped breathing. He removed his gaze from the amulet, stared more boldly at her, and then, in that squalid shack, in the silence of his inner struggle, his frail form a patchwork of shifting light and shadow, managed to draw up from his tormenting depths a faint trace of his former will.
'All right,' he whispered, 'I'll come with you… *And God help us all!*'

Chapter Four

'We haven't slept since we arrived in Rio,' Avril said. 'No wonder we're tired.'

Seated across the table from her, Alex nodded and smiled weakly, sipped his coffee and glanced over the balcony railing at the deserted Copacabana Beach, six stories below them. It was just before dawn and the boulevard was almost empty, a great moon gliding behind heavy clouds, the stars bright and plentiful. There were three cups of coffee on the table, one of them untouched, because Antonio, at that moment, was putting Father Benedict to bed in the spare room of the spacious and elegant hotel suite. Avril sipped her own coffee, let it burn down inside her, placed the cup back on its saucer and then studied Alex. If still drawn and pale, he seemed more alive than before, a fresh luminosity in his formerly dull eyes, his posture more positive. He was smiling at her with obvious affection, which was itself an improvement.

'You've seen an awful lot in one night,' he said to her, 'and, I think, stood up to it well. You give me courage and hope.'

He smiled again when he said it, but she was pleased to know that he meant it. She was also pleased by the fact that his sense of humour seemed to be returning.

'Do you think your priest will actually sleep without another drink? Or another sniff of *epena*?'

‘*Epena* doesn’t put you to sleep; it induces what you’d call extraordinary hallucinations and what the Indians are convinced is the only true reality: that other world beyond time and space, which, according to the Indians, exists within us all. So if Father Benedict was sniffing *epena*, it certainly wasn’t to find sleep.’
‘Then why was he taking it on a regular basis?’
‘I’ve just told you: Father Benedict, a Christian, has become involved in Indian magic and I think it all relates to Laura Wellman. The stealing of the amulet, the taking of *epena*, and that dangerous ritual with the snakes are all ways of trying to gain extra powers, notably occult powers, of the kind that I had in very minor ways, old Peruche had in quite spectacular ways, and Laura Wellman, in her obsession with the forces of darkness, wanted to obtain. Now, it seems, Father Benedict is also in search of those powers, perhaps because, in his guilt at not preventing the tragic events of a year ago, he hopes to make amends by pitting himself against those very forces that Laura insisted had possessed her.’
‘*To challenge death and survive it*,’ Avril quoted the priest. ‘*To be embraced by the symbols of the powers of darkness and not feel their crushing strength…*’
‘Yes,’ Alex said. ‘Father Benedict knew what he was doing. One way of obtaining the power, as Peruche taught me, is to directly challenge death – particularly death in the form of one of the symbols of the powers of darkness, the major one of which is the serpent.’
‘You used to practise that?’
‘Yes, Avril. Peruche taught me that all forms of life are part of the one life, that good and bad are two sides of the same coin, and that the way to purity, and thus power over normal things, is in the testing of one’s faith and courage by facing evil or death. For that reason I would, under his supervision, let myself be embraced by snakes – the biblical symbols of evil and death – and covered in poisonous spiders and other harmful insects. So, by overcoming my natural revulsion and fear of such creatures, I actually became one with them, making them indifferent to my presence and ensuring my safety. So, also, I strengthened my faith in the good and gained the first of the latent powers that all men possess, though most are unable to call upon. Those powers, which include what you would call telepathy and precognition, are the ones that Laura Wellman hoped she would find where the good fights the

bad: in the depths of the rainforest where the Yano, enslaved to Satan, guard the gateway that leads to eternity and the light of redemption. To reach those goals, one has to brave the dark forces, this being the test that all men must take one way or another.'
'And in attempting to find those same powers, Father Benedict is unwittingly destroying himself?'
'He doesn't know the way. He's fumbling in the dark. He's a priest, a Christian, whose faith has never been strong, and who now, believing that his lack of faith contributed to the terrible events on the plantation, is flirting with very dangerous forces and in danger of losing his soul.'
'This is, of course, only your theory.'
'Yes, Avril, it's only my theory – and of course it could be wildly off the mark. Who knows, after all, what really goes on in Father Benedict's's mind? Only him. Maybe God.'
Avril sipped some more coffee, trying to keep herself awake, aware that her eyes were very tired and that the darkness was comforting. She studied Alex over her cup, captivated by his expressive face, but shivered when she thought of him in the Amazon jungle with snakes and spiders all over him. Was all of this really happening? Was she living some kind of dream? Was she really starting to believe that she was hearing about other worlds and strange powers? Yes, in truth she was – the evidence seemed to be overwhelming – and she felt that from the moment she had placed the amulet around her neck, she had herself taken on certain powers that she had not known before.
'And what about this amulet?' she asked, lifting it up off her throat. 'Do you really think the priest stole it in the hope of gaining such powers from it?'
'I really don't know. He possibly told us the truth. I *did* give it to Laura and maybe she later gave it to him, though somehow I doubt it. Then again, she spent most of her evenings on the plantation in that awful room with my father and Rollie Thatcher where, according to Father Benedict, he found the amulet; so possibly it was Laura who actually lost it, most likely during the night of the murders. So either Laura actually gave the priest the amulet – which I doubt, since she was so obsessed with magical powers – or, more likely, he found it where she'd lost it during the bloody events of that horrible night.'
'Do *you* believe the amulet possesses magical powers?'

‘Yes. Everything bad that happened to me, happened after I gave the amulet to Laura. Shortly after that, I tried to test the limit of my magical powers – and did so, against Peruche’s warnings, for negative reasons – only to find, when the snakes actually turned on me, that my powers had deserted me. They left me not only because I gave away the amulet, but because I gave vent to anger and hatred. So, as Peruche had told me, I lost my innocence and faith and, because of that, also lost the occult powers that had protected me. So, yes, the amulet certainly has magical properties, both negative and positive.’

‘Now that I have the amulet, will the same magic work for me?’

‘I don’t know. It possibly depends on your nature. It might have worked for the priest, but in a negative way, destroying his badly needed faith and plunging him into despair. Doubtless it worked for me because I believed in it. Whether or not it works for you, only time will tell – and even then, it could actually work against you and even put you in danger. I’d rather you got rid of it immediately, but can see that you won’t.’

‘What makes you so sure of that?’

‘Your eyes. They turn strange when you look at it.’

Avril did just that, almost challenging him to try and stop her, looking down at the blackstone amulet that lay in the palm of her hand, featureless and yet oddly opaque, as if hollow and depthless. She blinked and looked again, feeling herself drifting away, then saw black night, dark clouds, wheeling stars, the impenetrable cosmos.

There were murmurings, ghostly whisperings, all around her, inside her, and a light seemed to blossom up through her to warm her whole being. She dissolved into herself, passing down through her essence, entered a curving tunnel of light and darkness and emerged to the infinite. There past and future merged, time and space became one, all that had been and ever would be pulsated like the heart of the universe. She saw stars in all directions, some exploding silently into fountains of rainbow colours, others moving back and forth in glistening clusters of no known dimension. Then sound: a rising clamour, the whisperings rapidly building to become a wall of noise, voices separate, then as one, all around, above and below, like the stars: a single great sound that filled the void and gave it life everlasting.

One voice: a million voices. One sound: a rising tide. The boundless, anguished cry of human history reverberating far in the future. She was

shaken and then sundered, her soul scattering through the cosmos, then returned, trying to gather herself together, through that tunnel to tangibles: lights rising and falling, drums pounding relentlessly, sweat gleaming on brown skin, faces painted and scarred, a slit throat pouring blood on gleaming steel as flames flickered and scorched.
She recognized her immediately (How often had she been described?): the red hair long and windblown, cheekbones prominent and classic, lips full and sensual, green eyes wide and possibly demented as she cried out for help… *Laura Wellman!* (Was it she?) What was happening in that fearful jungle darkness? Yellow flames flickered over her body as she writhed in the mud. Fire in darkness, trees dripping, stars above, mud below, and those fierce, barbaric men, skin brown, faces painted, inflamed by the pounding drums and the hallucinogenic *epena*, were dancing around her, holding her down, kneeling upon her…
Was it she? Who else? Horribly abused, yet alive, her long hair falling over her stricken face and trailing into the mud… Yes, it was Laura Wellman, sobbing brokenly and calling for help…
Avril retreated from her, shrinking back into herself, shaking her head from side to side in protestation and then opening her eyes again.
She saw it all above her: black night, dark clouds, wheeling stars, the impenetrable cosmos around the Earth as it had always been. She was on the balcony of the Copacabana Palace Hotel, staring up at the sky.

Chapter Five

What had happened? Had she imagined it? Was the amulet some kind of mirror? Had she really heard the voice of Laura Wellman crying out in despair? Avril shivered and looked at Alex, saw his steady, gentle gaze, shivered again and let the amulet fall from her hand to rest again on her throat.

‘Are you all right?’ Alex asked. ‘You don’t look your normal self.’
‘I’m okay. I’m just tired.’
It was a necessary lie and she averted her gaze, feeling oddly ashamed of herself, perhaps even cowardly. She was, then, considerably relieved when Antonio stepped out onto the balcony, smiling in his warm and relaxing

manner while reaching down for his cup of coffee. He sipped it, winced, put the cup back on its saucer, then shook his head sadly from side to side, his face a picture of tragedy.
‘It’s almost cold,’ he said, ‘but I’ll have to live with it. Better cold than no coffee at all at this early hour.’ He pulled his chair out and sat down between Avril and Alex, rubbed his eyes and stifled a yawn and glanced from one to the other. ‘The priest’s out like a light,’ he said. ‘He’s not happy, but he’s sleeping at last. Which means for now he’s not drinking.’
‘What do you think he’ll feel like when he wakes up?’
‘Terrible, my beautiful English rose. Absolutely awful.’
‘I feel awful right now.’
‘You’ve been through a lot in a short time. You travelled a great distance, arrived in a strange city, and then had some extremely strange experiences, most naturally disturbing. You are, like the priest, paying the price for being close to our Alex here.’
He gave Alex his warmest smile, easing the cutting edge of his joke, and Alex responded by nodding his head in agreement.
‘Avril’s been paying that price for a long time now,’ he said, ‘and I’m not at all sure that I’m worth it.’
‘Do *you* think he’s worth it, Avril?’
‘Yes, Antonio, I think he’s worth it. And so, as far as I can judge, is his good friend, Father Benedict.’
‘Ah, yes,’ Antonio said, ‘Father Benedict… who needs the sleep he’s now getting.’
‘Father Benedict isn’t the only one who needs sleep,’ Alex said. ‘I can’t keep my eyes open a minute longer, so I think I’ll creep off to bed.’
‘I’ll join you in a minute,’ Avril said, ‘when I’ve finished my coffee. And I want to spend another minute or so with this handsome Brazilian.’
‘Fine,’ Alex said, unconcerned. ‘Antonio, I’ll see you in the morning, when we’ll decide what to do.’
‘So be it, my friend.’
Antonio lazily waved his left hand as Alex stood up, nodded, smiled at each of them in turn, and then walked, almost drunkenly, into the suite. For a moment there was silence, broken only by the lapping of the sea far below, and Avril, seeing Antonio’s soft smile, knew why Alex was fond of him.
‘I’m pleased you’re here, Antonio,’ she said. ‘I’m not sure I could handle all

of this without your support. Alex is terribly fond of you and now I can see why; and I'm glad not only for him, but also for me, since I need the reassurance of someone sane.'
'You think Alex and Father Benedict are insane?'
'No, Antonio, I don't. But I *do* think they're both very disturbed and that I, given the events of this extraordinary night, might be going the same way.'
Antonio smiled even more broadly. 'I don't think so,' he said. 'I said it before and I stand by it: you're a very level-headed English girl who can do nothing but good here.'
'Gee, whiz, thanks, but I think my level head is increasingly out of kilter. What's happening, Antonio? What have I let myself in for? There are things happening here that I don't understand, things that are changing my way of thinking and making me fearful. I used to be pragmatic, but I'm not anymore; I feel that I'm slipping into a dream from which I might never waken up. I might have been good for Alex back in England; I'm not sure about here. I feel as if I'm losing control, being taken over by something: this country, the whole situation, perhaps that damned woman, Laura Wellman. Will you tell me the truth, Antonio? Is Alex still in love with her? His obsession is so strong, I think he must be, but I can't be too sure.'
She hadn't wanted to ask that question but now it was out, lying in the silence between them like a stone on a riverbed. She felt Antonio's gaze upon her (she had lowered her own eyes in embarrassment) and understood that he was weighing his words and what answers to give her. Eventually she looked up, seeing dark sky and pale moon, the stars beginning to fade before morning, Antonio's *café-au-lait* face framed by the distant hills beyond the curved sweep of the beach. He smiled and shrugged, then raised both hands in the air, an oddly bemused gesture that touched her with its evident sincerity.
'Of course he was in love with her,' he said. 'It was the first such love of his life. He wanted her with the kind of innocent passion that simply can't last. She was twice his age, Avril – his love was hopeless from the start – but she entered his life as his first great temptation and exploded his innocence. Yes, certainly it was love, but not the kind that you two have for one another. It was the sort of romantic obsession – a violent, inane obsession – for which Alex was totally unprepared.'
'But he's *still* obsessed with her, Antonio – possibly more than with me.'
'No, Avril, I think you're wrong. It is of course true that he's obsessed with

her in one way, but that doesn't necessarily mean that he's still in love with her. You must accept, for a start, that Indian magic might actually work and that Alex's nightmares, which are the same as those suffered by Laura, could in truth be the products of witchcraft or voodoo, rather than just being Alex's subconscious way of identifying with the woman he once loved. Assuming, however, that this isn't the case – which I think we must for now – my own view is that Alex is obsessed with Laura Wellman not only because of his similar nightmares, but because of her brief relationship with his late father.'
'That's true,' Avril said. 'That discovery still haunts him. He's talked a lot about it. He feels that they both betrayed him and therefore didn't give a damn about his feelings.'
'Exactly. No matter how good or bad Frank Poulson was, he was still Alex's father, and so Alex, who had a surprisingly clear-eyed view of his father's dubious nature, was still in no way prepared for the discovery that his father and Laura were having an affair behind his back.'
'And you believe that's all there is to it?'
'No, I don't believe that's all there is to it. But I believe that if he hadn't found out about Laura and his father, he would have been able to face up to the rest of it.'
'You mean the killing of his father, followed by Laura's disappearance.'
'Yes. Make no mistake about it: Alex really does believe that those dreadful events were preordained for some purpose or other – believes it because Peruche suggested it – and so, until he can discover that purpose, he won't find the peace of mind he sorely needs.'
'And you think he can only learn what the purpose is by first finding the elusive Yano tribe, if indeed it exists, and even, possibly, Laura Wellman.'
'You really *are* a bright girl.'
'So what about Laura, Antonio? Do you think she was simply living in a world of fantasy – all those bizarre stories about her background and upbringing – or that she might have been perfectly mad, as Alex sometimes believed?'
'Who knows? Certainly she was a peculiar one. From the moment I met her, I felt there was something odd about her, something distracted, neurotic and potentially self-destructive. Her eyes, which were gorgeous, never truly fixed upon you, but invariably seemed focused inward to some dark, hidden corner of herself. Likewise, when she talked, she seemed to be talking to herself, and

she often behaved like someone sleepwalking – and she drank far too much. Her mad mother? Aleister Crowley, the so-called Great Beast? Her conviction that she was possessed? Even if all of these were simply the products of her overripe imagination, they might still have been, to Laura, as real as real life.'

'Where I come from,' Avril said, 'we'd call that madness.'

'You would,' Antonio said, 'but the Indians would not. The Indians believe in a universal consciousness, that all minds are part of the one mind, and that the instant something is imagined, or simply thought into being, it becomes as real as anything else held in that mind, past, present and future. Thus, by Indian terms, everything that Laura believed had happened to her in the past; had in fact been willed into being by that very belief and was therefore as real as any other manifestation of her consciousness. In other words, if Laura believed herself to be possessed, then she *was* possessed.'

Avril thought of that and shivered, automatically touching the amulet, recalling what she had experienced when she looked at it with too much concentration. She had felt mesmerised, lost in some other world, her spirit roaming freely through time and space to find eternity's gateway… *What's happening to me?* she wondered. *Can I really believe what I seemed to experience? Did I actually hear the voice of Laura Wellman when she cried out in torment?* And then she lowered her hand, suddenly frightened of touching the amulet, and realized that the last of her old beliefs were turning to dust.

'This is all too much for me,' she said. 'I can't handle it right now.'

'Understandably. Right now you're very, very tired and should be in your bed.'

'I'm on my way, *Senhor*.'

They stood up together, Antonio pulling Avril's chair back while she moved away from the table. She leaned on the balcony railing, looking down at the dark beach, still unable to fully grasp what had happened or draw any conclusions. The city was finally sleeping, the sea murmured, the hills were black, and she turned away from all of it, feeling unreal, to see Antonio's thoughtful face.

'What about you?' she asked him. 'Are you going to bed as well?'

'I don't need sleep as much as you two,' he replied, 'so I'll stay out here a little longer and make sure that Father Benedict doesn't play up again.'

‘You’re a good friend to both of them, Antonio.’
‘It’s just the Brazilian way.’
Avril smiled and nodded, then entered the suite, going directly to Alex’s room and opening the door. He was stretched out on the double bed, his hands folded behind his head, his eyes wide and focused on the ceiling, as if trying to stare through it. She closed the door behind her, then went quietly towards him, aware that back in England, even during the war, she would not have been so casual about staying under the same roof with a man, let alone sleeping with him.
She and Alex had certainly shared a bed occasionally (a lot of old rules had been quietly broken during those heady years), but they had never so overtly shared accommodation or made so clear their relationship. It had always happened in Alex’s flat during the early hours of the evening; not once had she stayed overnight or even left after midnight…
Respectability, she thought. *So necessary to we English. I’m a very long way from that now – and from all I used to believe in…*

She stopped by the bed, looking down upon him, and saw him looking up at her, his sky-blue eyes illuminated in the circle of light from the lamp on the cabinet beside the bed. Yes, they had made love often, but never successfully, and now, behind the gentleness of his smile, she saw the pain of that knowledge.

‘Can’t you sleep?’
‘I’ve been waiting for you.’
‘That’s nice,’ she said.
She sat on the edge of the bed, let him take hold of

her hand, turning it over to kiss the back of her wrist and pressing her palm to his cheek. He held her hand there for some time, a mute gesture of affection, then eventually lowered it to his side, but kept holding on to it.

‘I’m so glad you came here with me,’ he said. ‘I couldn’t face this alone.’
‘Is it that painful to be back?’
‘Yes,’ he said. ‘And right now we’re just in Rio. If it’s this bad simply being back in Brazil, it’ll be worse in the Amazon.’

‘Why are you so upset at being in Rio? Nothing happened in Rio.’
‘I’m upset because Father Benedict’s here and in such a bad way. You can’t imagine how much he’s changed; how much he’s deteriorated. And, of course, if he’s deteriorated in a physical sense, he’s deteriorated in other ways as well. To see someone you remember as being exceptionally sane and bright taking part in those voodoo rituals… Well, there isn’t much I can say except that it shocked me. No, it was more than merely shocking; it was actually frightening.’
‘And seeing him must have brought you closer to Laura Wellman.’
‘Yes,’ he said, ‘that’s true.’
Jealousy, Avril thought. *I am jealous. Oh, dear God, how pathetic*… And refused to flinch from her own conclusion, despising herself for the truth in it, understanding that no matter the circumstances, human frailty would always win.
‘But it’s not just Laura,’ Alex continued. ‘It’s the whole of that horrible time. Just being back in Brazil reminded me of everything, particularly the slaughter of my father and that pig, Rollie Thatcher… Natural justice? Perhaps. They both died at the end of their era. They were obliterated by the Indians they’d themselves tried to obliterate, and now the plantation and the mission are closed and only the mystery remains. I was a child then, Avril, viewing it through a child’s perceptions, most of it heightened and dramatically coloured to the stage where it blinded me. And now, no longer a child, I still can’t feel like an adult, instead feeling crippled, emotionally and physically, by all that occurred.’
Knowing what he was thinking, Avril understood his pain: they had lain together infrequently on the narrow bed in his modest room, touching one another like children at play in the darkness. They had wanted to make love, to find fulfilment in that war-devastated city, but each time he had tried to enter her, his fears forced him away from her. Inexperience? No, more than that. It was all part of his suffering. He had shivered with the fevers of the fear that had been wrecking him, body and soul. Asleep, he had suffered nightmares – about the Yano Indians and the rainforest, about the lights rising and falling over some unseen horror that involved Laura Wellman – but even awake, in Avril’s arms, with the air-raid sirens wailing dramatically, he had suffered from a fear that had no visible cause but made his shaking limbs ice-cold. Now, looking down at his upturned face, Avril shared in his anguish.

‘What happens when we make love?’ he asked her. ‘Why can we *not* make love? God knows, I want you so much, my heart races just thinking about it. And yet we can’t get satisfaction; when it’s done, we both flounder in disappointment. When I lie with you, the images fill my head and paralyse me completely: my father and Laura together, silhouetted in that welllit window; my deliberate brushes with death until rescued by Father Benedict; that awful month in the school in Manaus, my body burning, my mind in turmoil; my return to the dreadful desolation of the plantation and news of the slaughter; and, finally, perhaps most crippling of all, the knowledge that Laura’s disappearance had seared me even more than my father’s death… That, more than anything else, seems to haunt me relentlessly.’

He had spoken in a desperate manner, clearly frightened by his past, and she stood up, unable to say a word, and deliberately started undressing. Her blouse fell to the floor, then her skirt, then her underclothes, and eventually she stood naked before him, her sight hazed by the bedside lamp. He stared up at her, almost breathless, and then pulled the bedclothes aside, and she crept into that warm space beside him and let his thin arms enfold her. She felt ruthless, in command, determined to break down all his fears, not caring that she also felt wanton as her tongue licked his dry lips. His mouth opened to accept her and she pressed her lips on his, twisting her body until her breasts flattened against him and his warmth filtered through to her. She felt his belly, his long legs, a shoulder bone against her own, the slow slide of his tongue down her cheek and around the lobe of her ear. Then she pushed him away, forced him down, and rolled over on top of him.

‘Keep your eyes closed,’ she whispered to him, ‘and don’t say a word.’

He did as he was told and then she closed her own eyes, letting her instincts guide her over his body and its lean, trembling hardness. She had never felt him like this before, not this close, not this real, and she sensed every nerve in her body coming alive to receive him. There was light behind her closed eyelids, diminishing circles of brightness, receding to become pores in the skin that she could see in her mind. Her fingertips touched him, his heat, his racing heart, and then she traced the rise and fall of his ribcage and pressed her hands on his belly. Yes, his stomach, a man’s stomach, unlike a woman’s, and she, a mere girl, still struggling to be a woman, explored that alien flesh with tentative fingers, sliding them down through his pubic hair. He responded with a gasp, a light convulsion of his groin, and then she touched

him and felt him growing between her fingers as he moved closer to her.
It was darkness and heat, the gradual melting of the self, the sound of quickening breath and beating hearts, of hands sliding on sweaty skin. She had started by dominating him, by commanding him to obedience, hoping to break down his fears by temporarily stealing his will; but the girl had done that, not the woman she wanted to be, and now, blossoming into that new woman, she felt her own will collapsing. His tongue was licking her aching breasts, his lips sucking her burning nipples, and she found, with dismay, with uncontrollable pleasure, that she wanted to give herself up to whatever he willed for her. He was moulding her with his hands, turning her flesh to flowing clay, stroking and squeezing her into something she had not been before: a passive creature, acquiescent, spreading herself in complete surrender, awaiting obliteration or renewal to some new sphere of being.
'Yes!' Alex gasped. '*Yes!*'
Opening her eyes, she saw him staring down at her, his body half leaning across her, propped up on one elbow. His blue eyes, unusually intense, gleamed in the moonlit darkness, and when his face, pale and thoughtful, came closer to her, she closed her eyes again.
Darkness and heat. His weight flattening her burning breasts. She felt herself opening out to receive him, her hips rising to find him. Something hot and hard touched her, withdrew, returned again, and her body, rising and falling in convulsive spasms, became a pool of pure sensation; then that hardness slid into her, dividing her and warming her, making her melt and pour all around it as it moved in her hidden depths. Everything that she had been, all her separate parts, became the one, extraordinary, pulsating well of mindless pleasure, raising her up through various levels of passion to pure, limitless feeling. There was sound – her own groan of greed – and then it all fell away from her.
'Don't stop!' she begged. '*Alex!*'
Her own voice humanised her, his name reminding her of herself, returning her to a vague, shifting awareness of their separate bodies. She was lying on her back, legs outspread, knees raised, her arms stretched out languidly behind her head as he fondled her breasts. He was there between her legs, his full weight pressed upon her, his belly sliding urgently along her belly as he moved in and out of her. She was responding in kind, remotely shocked by her own wantonness, her spine arching involuntarily, her groin shaking and

thrusting upward, her legs bending farther back to lock cross the blade of his spine. She moved against him and with him, trying to cling to her senses, losing them and then getting them back again and finally losing them totally. She tried to tell him – babbling something – but lost the power of speech and groaned, felt him very deep inside her, then something pouring up from her centre, flooding across her every nerve, that astonishing multitude of sensations, making her soul grieve and sing for joy as the woman in her emerged.

'Yes!' she cried out. '*Yes!*'

And then she felt it in him, also, as he poured himself into her, as his groaning accompanied the spasms that whipped through his body; felt his grief and exultation, his stunned awareness of freedom's slavery, his escape from the prison of childhood into the bonds of commitment. He was leaping out of his fear, vaulting away from his constricting past, joining with her, not only in body but in mind, to find the courage that would help him face the dangers that she sensed were to come. And then he shuddered for one last time, groaning into her breasts, his hands gripping her hip bones as she spasmed and spasmed again and finally settled beneath him.

They lay together in the darkness, one on top of the other, letting the night surround them with the song of its silence, until he, his tears of gratitude on her shoulder, pulled his head back to drink her in.

'I love you,' he said. 'Not Laura: *you*. I know it, but now I'll have to prove it, not only to you, but to myself. So I'm going all the way: I'm going to follow Laura's footsteps. I'll make Father Benedict come with me and then see what transpires. It's not love that motivates me – it's the nature of my nightmares – because until I learn what they mean, I can't be a whole person. I'm going into the rainforest, as far as I can go, until I find the Yano Indians, whom I'm convinced do exist, and once I find them, I'll set myself free once and for all. It'll be dangerous, but I want you to come with me, because I think you're part of it.'

He rolled off her and lay beside her, clasping her fingers in his hand, his face turned to the side to stare at her as she made her decision. She calmly returned his gaze, or, at least, feigned calmness, trying to accept that she had changed for all time and could never turn back again. She could still feel him inside her, every nerve recording his presence, and her flesh, once a mere shell for her spirit, now thrived on itself. She was glowing within, almost

exalted to be alive, but as she looked steadily at him, seeing the radiance of his fresh courage, she instinctively reached up, touched the amulet on her throat, suddenly recalled that dream of Laura, again heard her cries for help, and even as the fear returned, wrapping her tingling skin in ice, she knew that she could not stay here in Rio while Alex, who had helped her become a woman, ventured into the unknown.
'I'll come with you,' she said.

Chapter Six

Situated on the delta of the Amazon River, first viewed by Avril from the window of the airplane as a cluster of white buildings in a great jigsaw of flat green islets and dense jungle, Belem was actually a small city of considerable charm and much humidity, its streets, long and straight, all lined with mango trees, forming elegant corridors along which the cooling breezes brought the perfumed fragrances of the nearby tropical forest, wafting them past the stately *Belle Epoque* houses with their glazed-tile facades, extravagant roofs and Venetian shutters, past the Portuguese colonial homes of earlier decades, then on across the busy markets and parks and back to the river.

'Now you're in the real Brazil,' Alex told her. 'The Brazil of forest and river. From here on, we can only travel farther from civilisation.'

They had arrived directly from Rio that morning, but had only one day to spend here and now they were in the downtown area, having a late breakfast at the *Bar da Parque*, sitting in the open air, on metal chairs around a small table, on a raised platform that overlooked the *Praca da Republica* and the busy main road that led to the dock area. Father Benedict was sipping coffee, his face screwed up in distaste, and Antonio and Alex were sitting on either side of him, with Avril opposite.

She glanced along the tree-lined boulevard, then across the triangular-shaped park, observing the shoeshine boys, the pagoda-shaped bandstand, the many food stalls along the handsome mosaic pavements, the beautifully slim mulatto girls who walked with an open sensuality of the kind unknown in staid England, and realized that if Rio had made her feel far from home, this

city, Belem, with its heat and constant rain and humidity, with its exotic mingling of races and its tropical languor, was truly uprooting her from her past and casting her free from her former self.

'We're meeting him in thirty minutes,' Antonio said, 'so let's pay up and go.'
'Where are we meeting him?' Alex asked.
'At Castle Fort in *Ver-o-Peso*. We're having drinks overlooking the market to give Avril a thrill.'
He had said it as a joke and Avril appreciated the gesture, but she still felt a little on edge to think of who they were meeting: a gentleman named Peter Nicholson, the old friend of Laura's father who had been instrumental in getting her the job with *National Geographic* magazine and was presently working right here in Belem. The meeting had been arranged by Antonio who, writing to Nicholson in New York at Alex's request, had been surprised to receive a reply from Brazil. Antonio had written to Nicholson about Laura's disappearance, but had also asked him to confirm the rather bizarre background details given by Laura to Alex, and Nicholson, in his reply from the offices of the *Central Press Agencia*, had suggested that they meet him for drinks on their way to Manaus. Now, as Antonio was placing *cruzeiros* into the waiter's hand, Avril, standing up with the others, could not ignore her nervousness and realized that what she most feared was the effect that Nicholson's revelations about Laura might have on Alex.
'Right,' Antonio said, 'let's hit the road. Since it isn't that far, we can walk.'
As they started away from the table, Alex reached out to Avril, holding her hand as they descended the steps and stood on the pavement. Father Benedict came down behind them, being helped by Antonio, and then stood unsteadily beside them, his bleary eyes squinting into the sunlight, looking across the busy *Praca de Republica* with its ornate bandstand, grassy mounds and leafy trees. He shivered as if shaking off a ghost, then reluctantly crossed the road with them.
'This is senseless,' he said, repeating a complaint he had been making all morning, rubbing his nose and sniffing repeatedly like an old man with asthma. 'Why did I let you talk me into coming here? We're all behaving as if we're mad. We can only learn what we already know: that Laura's dead, that she was killed by the Yano Indians. We're putting ourselves in mortal danger for no more than that.'

‘Laura isn’t necessarily dead,’ Alex said. ‘And I don’t know what kind of danger you’re talking about.’
‘You know *exactly* what I’m talking about. I’m talking about the Yano. The powers of that particular tribe are far-reaching and have already affected us. They caused that unnatural storm in Rio – they were giving you fair warning – and rest assured that they’ll manage something much worse if you insist on continuing with this madness.’
‘The storm was possibly natural,’ Alex said without anger. ‘But even if it *was* caused by the Yano, I wouldn’t turn back.’
‘And Avril? You’ll put her in danger, also, by bringing her with us?’
‘Alex gave me the choice,’ Avril said, ‘and I decided to come. I have my own reasons.’
The priest did not reply, but glanced left and right, and then, with a furtive, greedy expression, at the amulet resting on Avril’s throat. She put her hand up to touch it, automatically protecting it, feeling that the priest was about to grab it and run away with it. In the event, he didn’t, but merely continued to stare at it before shivering, glancing left and right again, and then rubbing his tired eyes.
‘It’s all madness,’ he muttered.
They were walking along the main road, heading down to the dock area, the park on one side of them, food stalls on the other, the air smelling of fish, vegetables and stewing meat, barefoot children and shoeshine boys of the same age playing and working around them. Avril kept touching the amulet, recalling the visions it had given her, and suddenly wondering just how far Father Benedict had gone into the depths of its mysteries.
‘Why this Nicholson fellow?’ the priest asked irritably. ‘We already know about Laura’s past. I seriously doubt that he can add anything new to the subject.’
‘We don’t know that,’ Alex said, his voice reflecting his freshly energized appearance. ‘We don’t know if *anything* Laura told us was true or if she was quite simply mad. Also, according to his letter, Peter Nicholson had been sent by his employers to Brazil because they were concerned about Laura’s still unexplained disappearance and wanted him to investigate the matter further and submit a report. So, Nicholson possibly knows more than us about what actually happened during the night of the murders. Anyway, what have we to lose except an hour or so of our time?’

The priest did not reply, but merely sniffed and glanced around him, as if constantly searching for something that only he knew about. In the daylight he looked frightful, extremely ill and too old for his age, as if the tragedy of what had taken place in the plantation had crushed him completely.
Avril was mystified, unable to understand his anguish, refusing to believe that his guilt over the events that had led up to the murders could account for all that *angst* and failing health. More baffling, when she could bear to think about it, was the fact that the priest's symptoms were uncomfortably similar to those suffered by Alex in London – and if Avril could blame Alex's suffering on his former passion for Laura Wellman, she could find no particularly cogent reason for the priest's singular downfall.
'Are you all right?' she asked Alex, feeling a rush of concern for him. 'Are you sure you'll be able to sit there and listen to this man when he talks about Laura?'
Alex squeezed her hand and smiled cheerfully at her. 'Oh, yes,' he said. 'After last night, the best night of my life, I can face up to anything.'
'You were wonderful last night,' Avril said. 'I still feel you inside me.'
Though true, it was not enough: there were shadows still remaining. She could not shake off the feeling that Laura Wellman, whether dead or alive, was a threat to both of them. Alex had found relief the previous night, making love with the skill of regained confidence, and she had responded (and the memory made her blush) by surrendering completely. The experience had exalted her, turning her body into a shrine, and she had known, in the ecstasy of her worship, that Alex felt the same way. It had changed him – she could see that; he had the glow of renewed faith – but she still felt endangered by the ghost that had called out of his past.
Antonio shouted at them, waving his hand, indicating that they should follow him and Father Benedict across the wide, busy road. This they did, avoiding the heavy traffic, still heading for the dock area, but then, before reaching it, turned into Rua Alfredo, a long, narrow street lined with open-front stores of all kinds, the buyers and sellers of an equally diverse nature, representing many races and creeds, the men in shorts and vests, rubber thongs on their bare feet, the women in loose dresses and turbans, pouring sweat from abundant flesh. It was a clamorous, colourful street, but blessed with a cooling breeze, and it led them eventually into the *Praca Relogio* and the port of *Ver-o-Peso* on the Bay of Guajara.

Sunlight flashed off the water, numerous boats of all kinds and sizes jostled alongside the planked jetties, and the fruits of the many market stalls spilled onto the ground, adding a multitude of colours to the already colourful Portuguese mosaic flagstones: Brazil nuts and berries and mangoes and peaches, pineapples and short, fat bananas and other strange fruits with exotic names and unusual appearances – all piled up on the stalls or forming large mounds on the pavements and roads, beside the enormous fish that were stacked in soaking heaps, their silvery-grey bodies gleaming wetly in the brilliant noon sun.

Antonio led them around the square, past the stalls, through the babbling, importuning hawkers, in the general direction of the raised Castle Fort. Here, in the older part of town, the buildings looked like they were rotting from the relentless alternatives of tropical heat, daily afternoon rain and subsequent humidity. Everywhere on the walls of the baroque and splendid Portuguese architecture, posters were peeling, plaster was crumbling, and jagged holes let light shine through the brick, the buildings in general being in an advanced state of decrepitude and disrepair, yet still managing to retain a seedy elegance that had a charm all its own. Antonio led them up some steps to the top of the famous hill and eventually, out of breath and beginning to sweat, they arrived at the old gun emplacements on *Forte da Castilo*, overlooking the full sweep of the bay and the market immediately below. Behind rusty iron railings, in an area bounded by the large black guns, was an open-air bar consisting of simple tables and metal chairs. Only about a quarter of the tables were being used, and at one of them, near the railings, a man stood up and waved to them, obviously recognizing them from the description he had been given: three men, one Brazilian, and an English girl. Being the first to reach the man, Antonio introduced himself and shook his hand, and then, when the rest of them had been introduced, the man, Peter Nicholson, invited them to sit at his table. When they had done so, he ordered drinks – *Chopp* beer for Father Benedict and Antonio, white wine for Avril, Alex and himself – after which he clasped his hands under his chin and offered a pleasant smile. He was tall, slim and rather elegant, with silvery hair and a well-tanned, traveller's face, immaculate in striped shirt and tie, white slacks and dark blazer.

'It's a simple bar,' he said, 'but the view is the best in town, and I thought it might make a more pleasant hour than one spent in my office.'

‘Avril’s a stranger to Brazil,’ Antonio said, ‘so your choice, in this instance, was excellent.’
Nicholson nodded his appreciation, then laid his hands on the table, sitting back and looking at everyone in turn; then his gaze came to rest on Alex, who looked back with calm interest.
‘So,’ Nicholson said, ‘you’re the young man whose father was murdered.’
‘Yes,’ Alex said.
There was a brief silence during which Alex was almost expressionless, but then Avril, knowing what he must be feeling, sneaked her hand under the table and took hold of his, squeezing it until he glanced at her and managed a reassuring smile.
‘A terrible business,’ Nicholson said. ‘I truly sympathize with you. Terrible, and yet not too surprising – or, rather, relatively normal, given the area and circumstances.’
‘Normal?’ Avril queried, feeling shocked, ‘Did you say *normal?*’
‘I said normal given the area and circumstances. Bear in mind where you are, Avril. This isn’t London. It’s the Amazon and the laws here are different, based not on white man’s logic but on religion and old tribal customs.’
The waiter brought the drinks, set them on the table and departed, then Nicholson continued with what he had been saying.
‘As you know,’ he went on, now directing his attention mainly to Alex and Antonio while Father Benedict opened a hip flask and poured something stronger into his beer, ‘I was sent here by my employers to find out what happened to Laura Wellman, she originally having been sent to the Amazon at their behest. My brief was twofold: one, to find out exactly what happened to her, and, two, to see if there was a usable story behind all of this.’
‘Such being modern publishing,’ Father Benedict said sarcastically, his eyes bloodshot but intense, the glass of laced beer hovering in front of his lips, the hand holding it shaky. ‘And…?’
Nicholson shrugged. ‘I wasn’t particularly successful. I’m pretty sure about where Laura went – into the rainforest with the killers – but there’s no way of knowing whether she’s still alive or dead. As for the murders, they were vengeance killings, no more and no less, ritualistic executions in accordance with old Yanoama tribal customs.’ He glanced with concern at Alex and asked, ‘Can you listen to this?’
‘Yes,’ Alex said, but squeezed Avril’s hand again, the tension coming out of

his fingers and rippling up through her veins.
‘Okay,’ Nicholson said, clearly relieved. ‘As I’ve already pointed out, the murders weren’t unusual given the particular area and circumstances. The evidence points to the fact that the killings were committed by a single individual wielding a machete, that individual obviously being the young Indian, Mengrire, who disappeared with his girlfriend and Laura Wellman that same night. Your father and Rollie Thatcher were in the main lounge with the Indian girl and Mengrire simply let himself in – as you know, the front door was never locked – and then killed first your father and then Rollie Thatcher. The position of the bodies indicated that your father was killed immediately while sitting in his armchair in the middle of the room; Rollie Thatcher almost immediately after that, doubtless as he attempted to flee from where he’d been stretched out on the sofa near the windows. The dead bodies were then ritualistically mutilated – we can ignore the precise details – the weapon, in this case, being a knife rather than a machete, probably wielded by the Indian girl. The particular form of mutilation showed that it was an act of ritualized vengeance.’
‘By which you mean,’ Antonio said, ‘vengeance for the death of the girl’s father and her subsequent sexual exploitation.’
‘Correct.’ Nicholson turned back to Alex. ‘I take it you already know, Alex, that these particular cases weren’t the first as far as your father was concerned.’
‘My father’s abuse of the Indians was widely known and couldn’t be ignored, not even by me.’
Nicholson looked relieved again, sighing loudly and nodding, then he had a sip of his wine and offered a hesitant smile. He was obviously a decent man, trying to lighten Alex’s burden. Glancing at Alex’s pale, drawn face, Avril was grateful for the American’s sensitivity.
‘It *is* possible,’ Nicholson continued, ‘that Laura was directly involved in the killings. Why she fled with the Indians remains a mystery, but it’s my belief that it wasn’t a case of abduction – they couldn’t have taken her from the plantation by force – and so, for whatever bizarre reasons, she must have gone voluntarily.’
‘Where?’ Father Benedict asked, wiping his lips with one hand and staring over the mouth of his hip flask with watery, challenging eyes.
‘Investigation of the terrain surrounding the plantation revealed that three

people – Mengrire, his girlfriend and, we assume, Laura Wellman – took a boat along the Rio Negro, discarded it about fifty miles upriver, and then hiked north into the jungle towards Catrimani, just south of which is reported to be the province of the Yano tribe, presuming that such a tribe actually exists. If, as your letter indicated, Laura was obsessed with finding that tribe, it would seem that's where she went with Mengrire and his girlfriend, both of whom might have hoped to be given protection there. In any event, only one person fled with those two – and it had to be Laura.'
'What about Peruche?' Alex asked. 'Didn't he go with them?'
'No,' Nicholson replied emphatically. 'Naturally that was the immediate assumption, but it proved to be wrong. Every *seringueiro* we talked to confirmed that Peruche vanished, for reasons unknown, three days *before* the murders were committed. Nobody saw him go and nobody knows where he went, though the assumption is that he, also, went into the rainforest to return to the Yano as he had, reportedly, said he would do some day.'
'That's absolutely true,' Alex said. 'He told me that he'd once been a prisoner of the Yano, that he'd escaped, but that he'd have to return to them in the future. He didn't say why.'
Nicholson nodded. 'Anyway, no matter his reasons or ultimate destination, Peruche had nothing whatsoever to do with the murders – and at his age, it's unlikely that he'd have made it very far into the rainforest. We've therefore assumed that he died somewhere deep in the forest.'
During the ensuing silence, Avril looked over the rusty iron railing at the picturesque market scene spread out below her. The sea in the bay was attractive with the sun beating off it and the fishermen spreading their nets from the small, bobbing boats. This location was near the confluence of the Guama and Para rivers
– thus the mingling of mud-brown and humusblackened water – and as this, also, was the beginning of Alex's world, a strange and alien world, she began to understand why he was different from most of those his own age. Yes, Alex and Peruche, the young white boy and the old Indian: separated by gulfs of age and experience and yet united in friendship, in a world so far removed from her own that she still couldn't quite grasp it. Now, slightly frightened, she looked at Peter Nicholson and saw Antonio leaning towards him, his face unusually solemn.
'Mr Nicholson, when I wrote to you in New York, I asked you if the rather

colourful details of Laura's past, as related by her, had any basis in reality. So, were those details true or not?'
'They were essentially true. The colour was probably added by Laura. Regarding the main points: yes, she *was* the daughter of wealthy Hollywood parents, one of whom, her mother, was notably neurotic, highly impressionable regarding matters of the occult, and *did* indeed frequently boast of having spent a night, a single night, with Aleister Crowley, the so-called Great Beast, some time during 1915. However, since Crowley, irrespective of his reputed charisma and occult knowledge, was unquestionably something of a charlatan, I think we can take it that Laura wasn't possessed because of anything that went on between her mother and Crowley that particular night. Nevertheless, my own knowledge of Laura as a child and, later, as a fairly talented photographer in New York, convinces me that if she wasn't actually insane, she was certainly on the way to becoming every bit as neurotic as her mother had been; and that if she wasn't actually possessed by the so-called forces of darkness, she was certainly convinced that such forces exist and that she was definitely possessed by them. This neurotic belief, instilled in her by her mother and growing stronger as Laura became more emotionally unstable, particularly during her teens, seemed to have taken her over completely by the time she arrived in New York, shortly after her separation from her husband and estrangement from her father.'
'So you don't believe she was genuinely possessed?'
'No, Mr Bozzano, I don't. What I believe is that Laura was so strongly convinced that she'd been possessed, or cursed, it eventually became the real thing to her, at least in the sense that she began to see signs of it in the most unlikely areas – '
'Such as Pearl Harbour and Hiroshima.'
'Exactly. Her identification with negative or destructive events really began when, as an emotionally insecure teenager, with a neurotic mother and uncaring father, she was caught in a lesbian affair with the actress you mentioned in your letter and, more importantly, when that actress then committed suicide. I should point out, however, that the so-called lesbian affair, much exaggerated in later years by Laura as further proof that she was possessed by destructive forces, was really no more than a passing infatuation on the part of a very insecure teenager with an older, more sophisticated, woman, that they were never in fact found in bed together – as the physical

aspects of the affair were probably all in Laura's vivid imagination – and that the actress later killed herself, not because she was found in bed with Laura, which she was not, but because her career was going downhill and she couldn't bear the thought of ageing in anonymity. Give this truth, should we not then accept that Laura's connections between her own life and such destructive events as Pearl Harbour and Hiroshima were no more than exaggerated fantasies based on the most tenuous of coincidences? Yes, I believe we must. The possession, the curse, existed only in Laura's mind – and because she was always looking for signs of it, she naturally found them everywhere.'

Glancing at the sky, Avril saw dark clouds passing over the sun, heralding the coming of the daily afternoon rain. The clouds were slate-grey and, to Avril, uncommonly ominous, as if, after the experiences she had been through, her imagination was running riot and pushing her into a fear that had no solid foundation. Shivering, watching the bright sunlight turning grey, she felt increasingly unreal.

'Do you believe in the occult at all?' Father Benedict asked of Nicholson, his voice, though ravaged by alcohol, sounding slightly aggressive.

'Yes, I do,' Nicholson replied. 'I am, if I may say so, something of an authority on Brazilian religions and cults – which is why it was within my province to assign Laura to this area – and after years of study and investigation, I've certainly come to believe in the remarkable powers of Brazilian voodoo and Indian witchcraft. The fact that I don't believe Laura was herself possessed in the manner she often recounted has nothing to do with my quite separate belief in unseen forces.'

Father Benedict nodded judiciously, then managed to straighten up, staring at each of them in turn and pursing his lips. 'So,' he said, 'we might as well go back to Rio. We still don't know precisely what happened to Laura and we'll never find out, but we *do* know that the demonic possession was all in her mind. The poor woman was driving herself into madness and that's all there is to it. Her presence in the Amazon was an accident, no more and no less. It was not preordained.'

'That isn't necessarily so,' Alex said, leaning forward in his chair, his cheeks starting to show some colour, his blue eyes bright again. 'According to the Indians, if one believes oneself to be possessed, then one *is* possessed… and if one is in that particular state, he or she has opened the way for the forces of

darkness to enter. If this is true, then what happened between Laura's mother and Aleister Crowley is irrelevant; what matters is that Laura *believed* she was possessed and so became exactly what she believed herself to be: a victim of the forces of darkness – a victim and instrument.'
The air was turning chilly and Avril shivered again, not sure if it was caused by the afternoon's cooling or from the fear creeping over her. She studied Alex carefully, recalling all he had told her: about Peruche, about Laura, about the visions that had joined them all together… *A great ball of fire in the heavens; an umbrella of light*… Peruche and Alex had shared the same dream – they had dreamt of the atom bomb the day before it was dropped – and that dream, no matter how tenuously, had connected them to Laura. Now Alex, as if reading her mind, seemed to echo her thoughts.
'It's my belief,' he said to Nicholson, 'that Laura, simply by believing so strongly, conjured up the forces of darkness and was then possessed by them. The night before the atom bomb fell on Hiroshima, I dreamt about a great ball of fire in the heavens; and the old Indian, Peruche, who had the exact same dream, told me it was a sign that someone was coming to point the way to my future. Laura arrived the next day – a woman obsessed with the same bomb – and I knew that she was, as Peruche had indicated, the one chosen to lead me.'
'Lead you to what?' Nicholson asked.
'I don't know,' Alex confessed.
'Well, since there's no way of ascertaining what happened to Laura,' Father Benedict intervened, this time speaking in a hurried, breathless manner, 'there's no way we can either prove or disprove your theory – which again merely emphasizes the fact that your mission is fruitless.'
'It may not be,' Nicholson said. 'We may have a witness.'
Alex and Father Benedict were clearly startled by the remark, both sitting upright in their chairs as if charged with electricity. They glanced briefly at one another, both flushed and oddly furtive, then returned their attention to Nicholson.
'I received a cable yesterday,' Nicholson said, 'from one of my former acquaintances in Manaus, stating that a semi-deranged Indian girl located in a village in the rainforest could well be the daughter of the *seringueiro* whose death started all the troubles – the girl who fled into the jungle with Mengrire and, we assume, Laura.'

Hearing this, Avril was finally smothered in the fear that had been creeping inexorably over her for the past hour or so. Her heart was beating with a dangerous rapidity and her skin seemed to be on fire. She didn't really want to know what had happened to Laura Wellman; this was a mystery she no longer wanted solved.

'Naturally I can't confirm whether or not this is the actual girl,' Nicholson continued, 'but reportedly the girl in Manaus was found wandering in the rainforest, is presently suffering from severe shock, and babbles a lot about the Yano Indians and a redheaded white woman. The girl's being held in one of the waterfront houses of an *igapé* in the Educandos district. I've shown the location of the house on this map and I suggest you go find her.'

Nicholson passed the small, hand-drawn map over to Alex who studied it carefully, then folded it in two and put it into his wallet. Seeing him do this, Nicholson sighed, looked at his wristwatch, glanced at each of them in turn and said, 'Sorry, but I fear my time's up. Is there anything else?'

'No,' Antonio said. 'You've told us enough to be going on with. We really appreciate it, Mr Nicholson, and we'll let you go now.'

As Nicholson smiled and stood up, followed by the rest of them, Avril heard thunder rumbling in the distance and felt the start of the daily afternoon rainfall. Glancing up at the sky, she saw drifting black clouds, lowered her gaze and saw the shadows of the clouds passing over the bay. The thunder rumbled again, the wind blew, the water rippled, and the rain started coming down more heavily, splashing noisily around them.

Nicholson rolled his eyes dramatically, mocking the rain, shook hands with each of them in turn, then said, 'I'll go and pay the bill and then shelter indoors with the owner of the bar; meanwhile, I think you should catch a taxi and head for the boat, since given the nature of the Brazilians it might well leave early. Goodbye – and good luck.' He waved his hand and hurried away, heading for the shelter of the indoors bar.

Avril glanced over the railing at the market below, saw the buyers and sellers crowding together under the canopies of their stalls as the rain splashed on sodden fruit, on the alluvial carpets of silvery fish, on the dark, rippling water that rose and fell in languid motions before cascading over the hulls of the numerous boats along the darkening jetties.

Someone tugged at her hand. Seeing that it was Alex, she smiled and followed him. Father Benedict and Antonio, just ahead, led them back down

the hill. They were drenched in no time, but caught a taxi near the market, Antonio taking the front seat beside the driver, the others in the back.
Avril wiped rain from her face, noticed the others doing the same, felt the warmth of her body against her wet clothes and knew she would soon dry out. Alex's hand fell on her knee, squeezing it lightly as he grinned at her, then she glanced out of the taxi and saw the rain pouring down through grey light, splashing in a glistening tapestry off the walls of the ugly warehouses. The drive to the docks was brief, past the drab, ancient buildings, occasionally allowing glimpses of the bay's rippling, lightflecked water and the cumulus, grey clouds above it. Avril wanted to see the forest, the green banks of the *igapós*, but the sheets of rain obscured the far side in a thin veil of drifting spray.
She huddled up on the seat, hemmed in by Alex and Father Benedict, feeling their warmth seeping into her, their bodies pressing in from both sides with an oddly sensual effect. She was flushed, her heart racing, a feeling of unreality deepening, and then suddenly, inexplicably, she was overwhelmed by the ghostly presence of Laura Wellman, only knowing her second-hand, in her imagination, but now convinced that she was looking out of Laura's eyes at the men on each side of her.
Avril spiralled down into panic, into the bowels of bewilderment, unable to fully grasp what was happening, but still aware of herself. She saw the back of Antonio's head, bobbing beside the driver's head, then glanced from Alex to Father Benedict to confirm where she was. There was a final burst of thunder, faraway, across the bay, then a shaft of sunlight dazzled her eyes as the taxi moved on.
Drums? Could she hear drums? The fear formed a scream inside her. She had a vision of Laura Wellman outstretched on the forest floor, a mass of almost naked Indians crowding around her, the lights rising and falling high above as the drumming, relentless and hypnotic, made the very earth shake. *No!* she thought. *I will not submit to this!* She felt her spirit reaching out to the faith she had once renounced. The drumming… *Please stop it!* Who was she? *Laura Wellman*… No! *I'm not Laura Wellman! I'm in a taxi. I'm Avril*… She shuddered and looked sideways, saw Alex, reached out to him, held his hand as the drumming filled her ears and the taxi braked to a halt.
Drumming? *What* drumming? Glancing out of the window, fearful of where she might be, she saw a multitude of people around her, the docks beyond

their heads, the paddle-steamer at the jetty with the broad expanse of water behind it, a thin green line of forest faraway where the *igapós* began. Near the boat was a group of Indians loudly playing drums and singing, some dancing frantically, while the passengers, fighting their way through the hawkers trying desperately to sell their wares, climbed the gangplank to the lower deck, burdened with their suitcases and boxes, none looking too elegant… The taxi had simply brought her to the Belem docks and this was perfectly normal.

Avril felt dazed, rubbing her eyes and blinking repeatedly, but Alex tugged her gently from the taxi and pressed his lips to her cheek. She smiled automatically, but was hardly aware of him, her attention drawn to the crowds on all sides as she walked to the boat. There was the usual diversity of races, the customary ebullient, demonstrative activity, and everyone seemed to be shouting against the pounding of the drums. Alex now had his arm around her, holding her close in that dense mass, and she went with him, following Antonio and Father Benedict, with her thoughts spinning crazily. She wasn't sure what was happening, but sensed what was causing it. She reached out with a visibly shaking hand and touched the blackstone amulet that lay on the stem of her throat and drew her into its opaque depths. In there was another world, confusing her old beliefs, pitting her against her hidden nature and setting fire to her Christian faith. She felt frightened, disorientated, torn away from her stable roots, and the image of Laura Wellman, that ghostly competitor, now seemed to be wrapping itself around her more completely with each passing hour.

Glancing at Alex, her love made her spirit leap, but then she turned to see the drummer playing beside the boat's gangplank and the fear, first a chill in the humid air, turned to ice in her veins. She looked irrationally for the suitcases, wanting something familiar to cling to, even knowing that they'd been delivered earlier from the hotel, but convinced, in her highly-strung condition, that something was wrong. Indeed, the suitcases were there, piled up near the gangplank, Antonio checking them and giving instructions to the porters while Father Benedict, his face a parchment of pain, took a drink from his hip flask.

Avril felt claustrophobic, imprisoned by the jostling bodies, her head tightening because of the pounding drums, the wild dancing and singing. Then someone pushed her forward – she assumed it was Alex – and she

found herself directly facing the band and one man in particular: an unusually tall Indian with a carved bone through his nose, liana vines and rodent skins around his forehead, his brown eyes gleaming brilliantly. He stared at the amulet on her throat and then reached out to grab it.
'This is not for white women,' he said, speaking English, holding the amulet close to his face and studying it closely. 'You must surrender it now or suffer the consequences, which for you might be very bad.'
Avril heard herself laughing, a humourless sound, then she slapped the amulet out of the man's hand and pressed it back to her throat.
'Go away!' she snapped. '*Damn you!*'
Then she felt the pain and shrieked, jerking her hand off the amulet, realizing that the palm of her hand had been burned and seeing the circle of lightly scorched skin. Stunned, disbelieving, her heart racing as her fear increased, she tried to turn away from the Indian, but suddenly felt paralysed. She stood there, trembling helplessly, feeling cold in the returning sunlight, her senses scattering into the brightening air with the last of her strength.
'Magic!' the Indian said, sounding hoarse. '*You must not have the power!*'
And then the ice fell away, she felt the warmth of the sun, looked down to see the Indian's hand sliding over her throat, then Alex's hand slapping it away as he snapped something in Portuguese. Avril blinked and rubbed her eyes, licked her lips and glanced around her, saw the Indian retreating into the crowd behind the band, and reached up, automatically, her heart lurching, to confirm that the amulet was still resting on her throat, which it was. Then, when she had touched it, still feeling the pain in the palm of her hand, she realized that it had indeed been burned when the strange Indian, a medicine man, accosted her.
'Give it up,' Alex said, his gaze anxious. 'Throw that damned thing away!'
'No!' someone responded – her own voice. 'It's mine and I'll keep it. *Don't you ever dare touch it!*'
Her own voice? Not at all. Another voice, quite demented, raging with the venom of pure malice from some terrible, unknown place. She pressed her hand over her mouth, stepped back, glanced about her, saw Alex, Antonio and Father Benedict, all shocked, staring at her as if seeing the ghost of the woman they'd lost.
Then, without another word, the pounding drums filling in for their silence, they stepped back to let her walk to the gangplank and lead them up to the

boat.

Chapter Seven

The first two days of the voyage, upriver to Santarem, started in the monochrome of a disturbing dream and led her, with a dreadful inexorability, into a living nightmare. The bad feelings had begun during the drive to the Belem docks and had been deepened by her encounter with the Indian medicine man; but then, once the paddle-steamer had pulled out, its horn hooting, the crowds cheering, Belem shrinking behind them and the rainforest coming closer, Avril had felt herself sliding rapidly into the chilling embrace of an unyielding fear.

Recalling her strange behaviour on the dock, shocked at how she had shouted at Alex, convinced that the venomous voice that had come from her had not been her own, she found herself avoiding the others, unable to look them in the eye, and instead spent a lot of time by the railing of the top deck, watching as the boat inched carefully through the narrow, gloomy *igapós* and the rainforest, dark and silent, moved in and drooped over them.

The *igapós*, or *igarapés*, were the narrow, winding lanes of water formed by the partly submerged equatorial forest, the river winding around the tops of the submerged trees whose branches often fell over the boat or formed arches above it, casting their shadows on the top deck, flowers of yellow, mauve and white falling off them to fill the air with a heavy perfume and form floating gardens between the river banks. Viewed one way, they were beautiful, viewed another, distinctly ominous, and Avril, opening and closing her scorched hand, could not help but take the latter point of view and feel threatened by them.

She knew she had changed, that her old beliefs had died, and that now, no matter how much she tried to convince herself otherwise, she could not help but believe in those powers that Alex had frequently talked about. He had once possessed such powers, but had lost them when he lost his faith, surrendering his innocence to Laura and then giving her the amulet that had protected him. Now Avril had the same amulet and had already been affected

by it, taking power from it and losing herself inside it, in some strange, frightening otherworld. So, she stood on the top deck, surveying the narrow, winding *igapós*, watching the chameleons scrambling up the tree trunks and disappearing as if by magic, feeling, as she rubbed her dazed eyes, that she was losing her senses.

'It's no use hiding,' Alex said, coming up to her at the railing. 'This is going to be a seven-day trip and you can't avoid us that long. Besides, there's no point. We all know what happened back there. You briefly took on some else's personality and didn't know who we were.'

'Whose personality?'

'I don't know – and given the amount of venom in that voice, I don't *want* to know.'
Avril shuddered to recall it, gazed at the yellowish flood water, imagined herself sinking into it and finding blessed oblivion. Though she knew that what Alex had said was true, she couldn't fully admit it to herself.
'Are you suggesting I was briefly possessed?'
'Yes,' Alex replied. 'The amulet has magical properties, both positive and negative, and you know as well as I do what's been happening to you.'
'Nothing's been happening,' she insisted, lying and feeling guilty about it.
'Not a damned thing.'
'Nonsense. Why deny it? We're being haunted and you know it. First it was me – that was the storm over Copacabana – but now, because you're wearing that amulet, they're concentrating on you.'
'They?'
'The forces of darkness. The forces that brought me back here. That amulet's a channel from this world to the other, and as long as you insist on holding on to it, we'll all be in danger.'
'Rubbish. You're just trying to frighten me. You just want me to get rid of the amulet, but you won't succeed.'
'Why is keeping it that important to you?' 'I don't know. *I just want it!*'
She snapped the words and then hurried away, ashamed even as she did so, striding along the top deck, past the people slinging their hammocks, to the stern of the boat where two long tables, serving as kitchen and bar, were

already crowded. The sun was sinking, the sky turning charcoal grey, the boat gliding in and out of shadows, its engine offering a muffled, throbbing growl. Avril wanted to be alone, needing silence for speculation, but she realized, from one look around the top deck, that this would be impossible.

The old paddle-steamer had two decks and was divided into three classes, the upper deck consisting of first-class cabins, the lower deck holding the secondclass hammocks and most of the cargo. The first-class hammocks on the top deck, all covered with mosquito nets, were slung around the outside walls of the small and extremely hot first-class cabins, with passengers already lying in them, or sitting beneath them, and others taking up most of the deck space with their boxes and bags; and although Avril realized that she had no hope of privacy here, she also knew that the chance for such would be even less on the lower deck where, because of the haphazardly piled cargo, fresh air and privacy would be even more difficult to find.

In desperation she had a drink, buying *caipirinha* at the cook house, and then sat on pales of straw and again stared at the rainforest as it slid past on either side of the boat, beyond the tops of the submerged trees of the *igapós*. The dim light was changing to darkness and the boat's lamps were turned on, casting their yellow glow over the noisy, excitedly gesticulating passengers and the water below. The submerged trees looked eerie, the water swirling around their canopies, and the forest on the banks beyond the trees was turning from green to pure black.

Avril drank some *caipirinha,* stroked the amulet, let time pass, heard the chattering of the forest, its constant, loud rustling, and then saw the stars in the sky through breaks in the treetops. Alex joined her again, determined not to leave her alone, and she heard her own voice talking to him as if from faraway.

'I feel as if I'm being pursued,' she said, 'and you feel that as well.'

'Yes, I do,' Alex said.

'By the spirit of Laura?'

'No, by those who possessed her. We're being haunted by those forces I once viewed as lights over the jungle.'

'The lights that rose and fell over that unknown area ruled by the Yano.'

'Which is where we're going.'

'Why, Alex? What are you really looking for? Do you really believe you're going to find the Yano by going into that jungle. No one else has ever gone in

there and come out again, so what makes us so different?'
'You're wrong. Peruche was once their prisoner – and actually escaped.'
'A once-only affair that's never been repeated. Even Laura didn't return from that jungle, or rainforest, or whatever the hell you call it, so why should we?'
'Because we've been called. Because my nightmares were the same as Laura's. Because everything that's happened since we arrived in Brazil has been of a supernatural nature. I've been drawn back here for some purpose – I'm not sure what it is – but I know, because of all I've told you about Laura, that's she's drawing us to her.'
The boat was rounding a sharp curve in the river, the trees scraping it bow and stern, the branches bending and then whipping back up, sending their leaves flying into the air to rain down again over the heads of those massed on the deck. The boat appeared to fill the *igarapé*, grazing the trees on both sides, and that forest, within reach, actually meeting above her head, was a featureless blackness only broken up by the shifting yellow light of the boat and emitting, with a frightening regularity, the jungle's macabre chattering.
'I keep thinking the boat won't get through,' Avril said. 'I never imagined that the river could be so narrow the trees could touch us on both sides. I keep thinking that some spider or snake is going to fall from the branches.'
Alex smiled gently at her. 'It often happens,' he said. 'It's best to keep away from the railing while the forest is this close.'
'I thought the river was really wide.'
'This isn't really the Amazon. These *igapós* and *igarapés* wind through the rainforest for about a hundred miles, but in a few hours we'll reach the river proper, where you'll find it's much wider.'
'How much wider?'
'Up to seven miles. I hope this knowledge makes you feel better. And in the meantime, since everyone gets up early, you should try for some sleep.'
'I don't really feel like sleeping, Alex.'
'Come to bed,' he said. '*Please*…'
Still thinking of snakes and spiders while stepping back from the railing, Avril glanced along the deck and noticed, to her surprise, that most of the passengers had either climbed into their hammocks or were in the process of doing so. Checking her wristwatch, she saw it was midnight, a revelation that faintly startled her, and then she looked along the deck at the tables used for dining and saw that a few people were still there, faces bathed in the

lamplight. Father Benedict was there, talking drunkenly to a Brazilian, the fingers of one hand around a glass, a bottle of rum on the table.
‘Shouldn’t we stop him from drinking?’ Avril asked.
‘It’ll help him sleep,’ Alex replied. ‘I’d rather he sat there and got drunk than sneaked off for *epena*.’
‘Where’s Antonio?’
‘Almost certainly in bed, which is where we’re now going.’
He led her back to their cabin, which was as narrow as a tomb, one bunk-bed placed directly above the other, the bottom space not much larger than a coffin, the air hot and stifling. Instantly, Avril felt claustrophobic, but said nothing about it, aware that Alex was already disturbed by her recent behaviour. He smiled at her, tentatively, as if no longer sure of himself, embraced her, kissed her fully on the lips and slid his hands down her body. She felt herself responding, her flesh running in rivulets, her fear melting into the warmth of her trembling loins as he pulled her close to him. She wanted it – yes, to find a release from fear – but the minute he had undressed her and pulled her down onto the lower bunk-bed, she felt that she was being buried alive, suffocating in darkness.
‘What’s the matter?’
‘I’m sorry, Alex. I can’t. It’s too hot and cramped here.’
He looked hurt, but let her go, climbing up to the top bunk-bed, while she, unable to offer a comforting word, just lay there, below him. She closed her eyes and tried to sleep, failed and opened her eyes again, stared at the porthole and saw a shirt-covered body pressed to the window. She blinked, looked again, and realized that the body was that of another passenger in a hammock, one of the many strung to the walls of the cabins out there on the top deck.
With her claustrophobia becoming more acute, making her sweat with discomfort, she closed her eyes again and thought of the priest out there on the open deck, getting drunk with his bottle of rum. Thinking about him only increased her tension and brought a blush to her cheeks, resurrecting the memory of what she had felt during the taxi ride to Belem: a sensual attraction that had flowed out of her and warmly around her, seeming to touch both Alex and Father Benedict and then making them one. She had been shaken by her desire, by its force and ambiguity, (ricocheting, as it had, from Alex to Father Benedict, not knowing where to finally lay its head) and

now, when she thought of the drunken priest out on the deck, she was convinced that she had, when in that taxi, viewed him through Laura's eyes. The bunk-bed above her creaked as Alex tossed and turned in sleep, and then Avril stroked the amulet and slid down through herself, emerging from a curving tunnel of rushing, star-strewn darkness to that place where the magical lights rose and fell and the drums made a deafening noise.

She was on her back – on her bunk-bed? No, on the shaking earth, looking up at a patch of sky surrounded by faces, all of them, brown and painted, topped with feathers and braided vines, staring down at her naked, battered body and reaching out for her burning flesh. She took a deep breath, swallowing bile, and then raised her groin towards them, wanting it to be over quickly, to end and set her free, and then, as her spine curved and her body quivered like a bowstring, she let out a high, keening wail that reverberated shockingly in her ears…

Avril opened her eyes, staring wildly, terrified by that dreadful wailing, and saw a bright light pouring into the dark cabin in wavering striations. She sucked her breath in and held it, recalling the man in the hammock outside, first thinking that he was shining a torch into the cabin, then realizing that the light, forming a quivering, inverted funnel, was actually splaying out around his body where it covered the porthole window. The man, then, was still asleep in his hammock and the light was beaming around him.

Petrified, wondering what the light was and only certain it wasn't natural, she glanced at the bunk-bed above her, desperately hoping that Alex had awakened, but seeing no sign of movement, not even his tossing and turning, she tumbled into an even deeper fear.

Returning her gaze to the porthole window, to the brilliant, wavering funnel of light, she rubbed her stinging eyes but could not turn them away… and then she felt the vibration.

Yes, a vibration, a very fine, consistent sensation, rippling through her mattress, though the wood of the bunk-bed, then through every bone in her body until it made her head tighten. She heard a sound, glass on metal, and that helped her eyes to turn, widening in panic as the glass tumbler containing their toothbrushes bounced off the mirror on the wall and then floated in midair.

Avril stared, disbelieving, watching the tumbler float in the air, then saw the toothbrushes drifting away, spiralling gently as they ascended, then watched

combs and bars of soap and items of clothing rising slowly and drifting up, or to and fro, in a bizarre, silent ballet.
She let her breath out, then held it in again, her body quivering as the sheets under her made a soft rustling sound and then, as if pulled by invisible strings, billowed up around her.
'Oh, Christ!' she whispered without thinking, jerking upright on the bunk-bed, knocking her head on the base of the bunk-bed above and closing her eyes from the shock. The light burned through her closed eyelids, her whole body was vibrating, she heard the silence – yes, she *heard* the silence – and then, just as the fear tightened her stomach and throat, the vibrating stopped, she heard things dropping all around her, and abruptly her closed eyelids went dark.
Opening her eyes, she saw the porthole window framing that portion of the person in the hammock outside. Glancing down through the darkness, the unnatural light no longer present, she saw the tumbler and toothbrushes and items of clothing scattered on the floor. The cabin was quiet, *really* quiet, except for the sound of breathing, and she realized, as she fought to control herself, that Alex had slept through it all.

Chapter Eight

Though what? What had happened? She shivered and breathed deeply, feeling the fear, insulted by it; then recalling the strange light, wondering what it had been, aware that it had emanated from outside the cabin, not too far from the dining tables where Father Benedict had been drinking, she swung her legs off the bunk-bed, stood up and quickly dressed. She checked that Alex, still sleeping, was all right, and then left the cabin, closing the door quietly behind her and looking along the deck.

She was at the wrong side of the cabins – the light had come from the port side – so she stood there for a moment, trying to gather her courage, and then went towards the stern, to the area used for outdoor dining, passing the other cabins with the hammocks slung outside them, the passengers all apparently still sleeping, their belongings piled up below them.

It was a short walk, though it seemed to take forever, giving her time to

notice that the boat had left the narrow *igapós* and was moving into a broad expanse of moonlit water, the river banks far away on either side, the sky above clear and starry. The boat was moving slowly, navigating the darkness with care, and the muffled bass growling of its engine was the only sound in an oddly vibrant silence. Avril still felt frightened, her heart racing, throat tight, but she forced herself around the end of the cabins and stepped into the almost deserted dining area.

Almost deserted… but not quite.
Father Benedict was still at one of the tables, pouring himself another drink, his face a picture of dread and despair, his body visibly shaking.
'Father Benedict! What…?'
'Did you see it? Oh, my God, child, did you see it? Did you see that accursed light?'
Avril followed his wandering gaze, down to the water, up to the stars, and then, seeing nothing unusual, but forced to wipe sweat from her brow, she looked back along the deck and saw nothing but another long line of hammocks and the piles of luggage below them. Letting her breath out, the sheer relief making her feel weak, she looked back at the priest who was waving one hand, indicating the still, moonlit river and the black line of forest nearly two miles away.
'It came from over there,' he said. 'At least I think it came from there. It seemed to materialize from that direction, but I can't be too sure. Then it was hovering right above me, about fifty feet up – up there,' and he pointed directly over his head, 'right over the cabins.'
His wide eyes, reflecting the moonlight, looked like polished stones.
'It was a light,' he continued. 'A single ball of light. It was blindingly bright, but had a dark inner core, and the light seemed to be spinning around that core and sucking the air up. Yes, it took my breath away, burned my lungs and left me gasping, and then it dropped lower, and glided straight along the deck, and stopped, hovering as if by magic, at one of those hammocks. It just hovered there, very bright, spinning rapidly and silently, shining its light around the man sleeping in the hammock – he didn't waken at all – and then into the cabin, presumably your cabin. Then, like a torchlight being turned off, it just blinked out.'
The boat was now in the real Amazon and the river was extremely wide here,

indeed more like a lake than a river, both banks miles away. Still frightened, Avril studied it, her fear increasing at what she saw: that enormous expanse of perfectly black, moonlit water, fringed with dark jungle and covered by the vast bowl of the starry sky. The boat was still moving slowly, its engine comfortably muffled, but apart from that, the river was perfectly quiet and disturbingly eerie.

'That light seemed to be alive,' the priest said. 'It seemed to know what it was doing. And apart from sucking the air out of my lungs, it paralysed me with fear. *But it knew what it was doing!* It was some form of living entity. And as it examined your cabin, as it hovered silently outside the porthole window, I realized that it looked just like one of those magical lights that rise and fall over the rainforest when the Yano drums are pounding. Yes, Avril, it was one of those lights… *and it came here to find us!*'

Avril knew what he was feeling, remembering her own terror in the cabin, the fear gradually trickling away, but still leaving her shaken. The boat was pushing patiently against the current, the river splashing and rippling, its black surface reflecting striations of moonlight and a large, pearly moon.

'I saw it beaming into my cabin,' she said, 'but didn't know what it was. Strange things started happening in the cabin, items floating magically in midair, rising and falling.'

'Yes,' Father Benedict said. 'Rising and falling… like those lights in the depths of the rainforest.' He drank some *caipirinha*, his hand visibly shaking, licked his lips and brushed the white hair from his forehead and then rubbed his bloodshot eyes. 'The forces of darkness,' he said. 'Just as Peruche described them: the forces of darkness as lights in the sky, rising and falling… Yes, they know we're coming to them, why we're coming, what we want, and from now on they won't give us peace unless we turn back.'

'Alex won't turn back,' Avril said.

'I know that… so God help us.'

Listening to him, Avril finally understood fully that Father Benedict had come to believe in the reality of dark forces and the occult powers of the Yano, and was almost certainly blaming both for what he had himself become in his alcoholic, sometimes drugged, condition: a man obsessed with the nature of the 'otherworld' to which Laura had fled, and one who had gambled, as he had been doing in the voodoo ritual in Rio, with his life and, even more dangerously, his very soul. Now, thinking about that ritual in Rio,

she asked the question she had not dared ask before.
‘Why were you taking part in those rituals, Father Benedict? Was it some kind of penance?’
‘Yes,’ the priest replied, now too drunk to bother denying it. ‘I suppose I hoped that by letting myself be used in those blasphemous rituals, by challenging the forces of darkness to strike me down or possess me, I’d be casting myself beyond the reach of God, thus paying penance with eternal damnation for what I’d done.’
‘But that’s what puzzle me,’ Avril said, sitting down facing him. ‘You behave like a man shouldering insurmountable guilt… and I can’t work out why. Can you really blame yourself for what happened in the plantation when you know that what Alex’s father was doing couldn’t be prevented? From what Alex told me, you berated Frank Poulson many times, but received no help from the Manaus authorities when you tried to do something more positive. Given that, I can’t see how you can suffer so much for what finally happened. It must have been something else, Father Benedict – not the murders and not Laura’s disappearance – something other than that.’
The priest shuddered and turned away. ‘Yes,’ he said, ‘it was something else. Of *course* it was something else! It was the greatest of my many secret sins… my most lasting and scourging shame.’
‘*What* sin?’
The priest glanced left and right, obviously frightened that the strange light might return, shuddered again and had another drink and stared at her with haunted eyes.
‘The betrayal of faith,’ he said. ‘That and rank hypocrisy. What happened in the plantation, if hideous and tragic in its own right, merely served to accentuate the extent of my lack of faith and dishonesty. Oh, yes, I lacked faith – and had lacked it for years – never knowing if I was truly meant to be a priest and always questioning His nature. God’s nature – and my own. For all my piety, I was filled with lust, and once, in an Aboriginal station in the northern territory of Australia, I almost lay in sin with an ignorant native girl who, having lost one of her arms, was easily exploited. Do you understand, my child? My secret desires were my crown of thorns. Preaching virtue, I yearned for vice; condemning sin, I flirted with it; and all the time, even worse, was the knowledge that when I preached the Gospels, I was in truth questioning every word and doubting His divine nature.’

Avril gazed across the river, her eyes drawn to the distant rainforest, a thin line of deeper darkness between the vitreous black water and the dark, starflecked, moonlit sky.

‘Yes,’ the priest said, ‘in doubting myself I doubted Him, refusing to accept that imperfection could be part of His nature. And that girl with one arm: for years her beauty would haunt me, a symbol of life’s ironic cruelties and indifference to suffering. Had He created this world? If so, He had created its cruelties, including in His grand design the anguished cry of man’s suffering: murder and rape and pillage and torture and death. Yes, this was life, the boundless nightmare of human history; and if I clung to my beliefs, not in peace but in desperation, I was stripped of my final illusions of faith during the war in New Guinea.’

He closed his eyes and lowered his head, pressed his temples with his fingers, shuddered and took a deep breath, uncovering what he had buried.

‘My regiment recaptured a native village that had been held by the Japanese,’ he intoned, ‘and we found nothing but the remains of the burning huts and complete, hideous carnage. Every man, woman and child had been slaughtered in an orgy of violence, including rape and torture. Oh, God, what a sight! I’ll never forget it! And from that day on, I lived with the conviction that either God didn’t exist or, if He did, He was either impotent against the forces of evil or was Himself evil’s creator. So it was that when I came to the mission in the Amazon, I was no more than a pretender, outwardly living the life of a man of God, but truly doubting His ultimate nature and my own hold on virtue.’

The large yellow moon, reflected in the black water, appeared to be gliding just under its surface like a large shiny disc. Avril thought of the strange light that had hovered just outside the cabin window, and shivered, recalling the lights that rose and fell in her vile, vivid nightmares. Again frightened by the vast, silent river, she returned her gaze to the priest.

‘Yes,’ he said, ‘my hold on virtue, always tenuous at best, became, in the Amazon, no more than a pitiful pretence. I had the most licentious dreams and during the day lusted constantly, rarely able to look at a woman without secretly wanting her. Even the Indian girl, Mengrire’s girl, that unfortunate victim and avenger, even she, in the innocence of her flirtations, was able to arouse my desire to the point where it blinded me. No reason for my guilt? I think that reason enough. There I was, in my hypocrisy, loudly condemning

Frank Poulson's lechery, when in fact I was lusting after the very girl he so blatantly abused. Yes, my child, I was guilty – of lustful thoughts and hypocrisy – and then, when Laura Wellman arrived in the Amazon, those sins that were already tormenting me became even more grave.'

Before continuing, he looked all around him, first along the chugging boat, then down at the churned-up water, then in both directions across the wide river and finally up at the sky. The moon was bright and beautiful, the stars glittering in their multitudes, but thankfully there was no sign of the mysterious light that had come out of nowhere.

'So, my child,' he continued, 'I secretly lusted for women and material things – and when Laura Wellman arrived at the mission, I secretly lusted for her. Yes, from the moment she stepped foot on the docks of Manaus – and irrespective of the fact that my good friend, Father Symonds, had just dropped dead from a heart attack – I was, just like Alex, enamoured of her exceptional beauty and so reminded once more that my clerical collar hadn't robbed me of my physical desires and relentless male vanity.'

Avril straightened up in her chair, trying to keep her face composed, slightly shocked but also quite touched by what she was hearing. She glanced at the sky, searching for that strange light, but saw only the broad, moonlit river flowing in the opposite direction to the boat and disappearing behind it. Then, leaning her elbows on the table, she studied the bleary-eyed priest, recognizing that even in his dissolute state he was impressively handsome.

'You've really surprised me,' she said. 'That's the last thing I was expecting. Alex told me you didn't like Laura much and were often rude to her.'

'True enough,' the priest said. 'I *was* rude to Laura, but not for the reasons that Alex, in his innocence, supposed. The truth of the matter is that I soon found myself wanting her with constant, tormenting hunger and, for obvious reasons, was frightened of showing it. So, I was rude, sometimes distant, often angry, the latter stemming not only from her eccentric words and deeds, but also from my increasing frustration and hypocritical behaviour. Consequently, I suffered tremendous guilt and shame

– not only because of what I was feeling, but also because I knew that Alex was infatuated with her in the most obvious, the most painful, way. My guilt, then, was horrendous, tormenting me night and day, and was made even worse when I realized that now, when I fought with Alex's father about his abuse of his Indian workers, I could no longer be sure if I was arguing from

genuine conviction or simply because I resented his sexual freedom and lewd advances towards Laura. In short, I was in a quagmire of moral confusion and could no longer believe even my own words.'

'So when you tried to talk Alex out of his infatuation with Laura, telling him that it could come to no good, you were actually thinking only of yourself?'

'No, I wasn't that bad. Bad enough, but not that bad. I loved Alex like a son and was genuinely concerned for him, convinced that his passion for Laura could lead only to rejection and humiliation, equally convinced that the difference in their ages would make such a rejection inevitable. So, when I spoke to him, I truly spoke from the heart and repeated the same warnings to Laura, entreating her as someone much older and more mature to respond to Alex's adolescent infatuation with caution, and try to discourage him without causing him too much pain.'

'And all the time, when Alex was in love with her, you also wanted her and felt that by even thinking that way you were betraying his trust.'

'Yes,' Father Benedict said, his voice now almost a whisper, difficult to hear over the chugging of the boat's engine and the moaning breeze. 'Oh, of course I tried to stop it, to kill those feelings in myself, but working in the mission, with Laura there night and day, I was naturally in daily contact with her and forced, whether I wanted it or not, to spend a great deal of time with her. Yes, I fell under her spell, wanting her and worrying about her, and soon found myself obsessed with her unhealthy conviction that because she'd been possessed, she had to venture into the rainforest to find the Yano and brave the forces of darkness. So, I was drawn into her web and couldn't get out, trapped there as surely as was Alex and wondering how it would end. Then, when Laura sent her letter of resignation to her employers and moved into Frank Poulson's house – and when I thought of Alex's infatuation and his father's degenerate nature – I was convinced that the worst of my fears would come true in a very short time… convinced that I could do nothing about it, since I was paralysed, both morally and mentally, by my own desire for her.'

He poured some more *caipirinha* into his glass and drank it dangerously fast. Breathing deeply, returning the glass to the table, he finally managed to look directly at Avril.

'The betrayal of faith,' he said. 'I believe I mentioned that before. What I meant was the betrayal of my remaining faith in God and, perhaps more disgusting, the betrayal, even if only in my thoughts, of my friendship with

Alex.’
‘Did you ever tell Laura what you thought of her?’
‘Absolutely not. Never…’
His voice trailed off into silence, leaving only the boat’s mournful chugging, and then he shook his head distractedly from side to side and again glanced around him. Scanning the river and sky, then studying both sides of the deck, he looked like a fugitive from justice, dishevelled and fearful.
‘Sleep,’ he said. ‘I’ve talked too much already. Where’s my dear friend, Antonio?’
‘Sleeping in his cabin,’ Avril said. ‘Do you know where it is?’
‘Yes, child, I do.’
He left the table quickly, not saying another word, showing clear signs of embarrassment on top of his fear. Avril watched him go, his feet ringing on the wooden deck, saw him passing three or four of the hammocks and then turning left into the narrow corridor that led to his cabin. When he was gone, Avril stood up, planning to return to her own cabin, but then, when she took a step forward, the fear swooped down and grabbed her.
She stood there for some time, breathing deeply, controlling herself, looking around the deck, across to the rainforest, down at the water, up to the glittering tapestry of the star-filled sky, and finally along the great river. There was nothing to see – no mysterious lights. She was alone near the stern, but instead of returning to her cabin she curled up on a bench. The bench shook beneath her, the chugging engine was comforting, so she lay there, the river breeze blowing across her, cooling the sweat on her face. She slept without dreams.

Chapter Nine

The following day passed in a silvery haze, the sun high and fiercely hot, its brilliant light reflecting off the river and burning into her tired eyes. She talked to Alex and Antonio, had breakfast, talked some more, and then realized that Father Benedict was avoiding her with a criminal’s cunning. She understood his embarrassment – or, at least, tried to understand it – but something about his determination to not let her near him filled her with the conviction that ‘embarrassment’ was too mild a word for it.

So, she had a drink, nursed another, sipping slowly, studied the river in the dazzling light of day and saw the rainforest more clearly. The forest came right to the river's banks, its trees high and dense, the opposing banks about five miles apart and curving away in the distance. Both banks were dotted with houses on stilts, with palm-leaf hovels and wooden jetties, and then there were flat-topped mountains, small collections of stucco houses, and then the boat docked at the small town of Monte Alegre where, after letting some passengers off and taking more on, after the natives had come aboard to sell their various wares
– salt fish and fruit, snake skins and crocodile leather, Brazil nuts and rubber and jute – it filled up with supplies and gasoline and then, as the sun began to set, headed upriver again.

Darkness came abruptly, bringing with it the fear, and Avril, trying to forget the priest hiding up near the prow, sat at one of the tables near the stern and drank a considerable amount of *caipirinha* with Alex and Antonio. The boat was now so close to the bank, she could hear the forest chattering and rustling, occasionally saw a caiman gliding through the black water where the wavering yellow beams of the boat's lamps rose and fell with the current. Because it was both beautiful and frightening, her fear deepened with each passing minute, until, when midnight came, when most of the other passengers had gone to sleep, when Antonio left for his cabin and Alex invited her to do the same, she refused, saying it was too hot in there and that she wanted to sleep out in the fresh air, as she had done the night before. Alex looked confused and wounded, but he shrugged and left her there, and then, when he was gone, when she had unsuccessfully tried tracking down Father Benedict, she shivered and curled up again on the bench and stared into the darkness.

The light came from the rainforest, flying out from the silhouetted trees, a pinprick of yellow that grew larger and turned into a silvery disc. It skimmed across the river, not moving very fast, almost gliding as it advanced in a straight line, heading towards her. She sucked her breath in and held it, too frightened to exhale, but finally had to do so and gasped when she let her breath out. The light continued gliding towards her, seeming to spin on the move, its brilliance illuminating the black water in a great shifting circle. It

made no sound at all, but kept spinning as it flew forward, and then, becoming an enormous, flaring cartwheel, it hovered over her head.

It took Avril's breath away, scorched her lungs and left her gasping, and she lay there, too frightened to move, too fascinated to close her eyes. It was a single ball of light, not solid, like burning gas, its outer edge swirling around a darker core that seemed slightly opaque. She couldn't tell how wide it was – its outer edge seemed to melt into the darkness – but its dark core looked like the pupil of a giant, staring eye.

Avril opened her mouth to scream, sucked in hot air, gasped for breath, then the light dropped lower, swirling rapidly and vibrating, its striations forming an umbrella just above her and temporarily blinding her. She closed her eyes and tried to scream, kept trying in vain to scream as reality dissolved, and then she tumbled down through herself, through the well of terror that was her spirit, and then just as suddenly flew up again and broke through her own surface. Opening her eyes, she saw the light, a flaring whiteness directly above, then it blinked out and the darkness rushed back to let the stars shine upon her.

Normal stars. Normal sky.
Avril lay there in a trance, hardly knowing where she was, only aware of jewelled stars in a dark sky that went on forever. She lay there all night, her body shaking as if with fever, and only in the dawn light, when the stars had faded away, when the warmth of the new day started seeping into her chilled bones and the first of the early risers had emerged on the open deck, only then did she manage to sit upright and take control of herself. She was sitting there, drinking coffee, talking casually to some other passengers, when Alex, Antonio and Father Benedict joined her for breakfast.
She had to disguise her great relief when the boat docked at Santarem.

Chapter Ten

The fever returned just as Avril stepped off the gangplank, making her break out in a sweat and feel slightly nauseous. She was not helped by the heat, which increased as the sun ascended, blazing down on the jungle town of

Santarem with unwavering brilliance. The town was small and haphazard, its waterfront littered with shacks on stilts, the houses behind them, more sturdy, faced with Portuguese tiles and standing on the slope that rose up from the water's edge. Situated at the confluence of the Tapajos River with the Amazon, the town overlooked a yellow Amazon that was mottled with greenish patches, giving it a leprous appearance that was none too attractive. Avril looked briefly at it, then turned away, her stomach heaving, as Alex reaching out tentatively to take hold of her hand.

'Are you all right?' he asked. 'You don't look too good.'
'I'm fine. I'm just tired.'
'That's what happens when you sleep out on the deck: all that wonderful fresh air keeps you awake.'
She smiled, but felt awful, her body weak and sticky with sweat, her head tight and her stomach upset, a clammy fear hanging over her. She was being surrounded by the locals, most trying to sell their wares, some with squawking parrots on their shoulders, others displaying items of pottery, most of it decorated with drawings of frogs and serpents; and then she saw Antonio and Father Benedict, standing together outside the crowd, the former waving at her while the latter just stood there, his face as grey as that of a corpse, his eyes glazed with exhaustion.
'Actually,' she said to Alex, 'I *do* feel a bit offcolour and could do with a lie-down. Where's the hotel?'
'It's a waterfront hotel,' Alex replied. 'Just a few minutes walk from here. Just how bad do you feel? It is your stomach, or what?'
'That's it,' she said, reassuring him with a lie. 'It's just my tummy – it's not too fit today – but it's only a temporary condition. Nothing to worry about.'
'Something you ate?'
'Yes. Probably that plate of *pato no tucupi* that I had yesterday.'
'Ah, yes, that's a risky one.'
Sliding his hand up to her elbow, he guided her through the crowd, following Antonio and Father Benedict up the slope to the shacks on tall stilts. Avril saw the lines of laundry, the small verandas high above her, the faces of the inhabitants, African, Indian and Portuguese, gazing down from beneath the palmthatch roofs over which, with a languid, seductive beauty, some white clouds were drifting.

The sunlight hurt her eyes and she rubbed at them and looked ahead, the fear returning when she saw the back of Father Benedict and remembered the mysterious light that had haunted both of them. It had clearly terrified the priest and now she understood why: when it had hovered above her, spinning blindingly around its inner dark core, it had appeared to be an enormous, unblinking eye, hypnotic and pitiless.

Yes, it had mesmerized her, had seemed to resonate in her brain, convincing her that the silence was actually speaking to her in some supernatural manner. The ball of light had not been solid – she had seen the stars through it – but it had certainly looked incorporeal, devoid of dimension. Now, making her way up the hill, passing the high stilts of the waterfront shacks, with Alex by her side and Antonio and Father Benedict just ahead, she shivered and tried to shake from her head one frightening image: a consciousness manifesting itself from darkness and taking the form it required: an immense, searching eye.

Alex led her around a corner, turning right behind the waterfront, and then along a crude, busy street to the front of the hotel where, to Avril's relief, they would spend a day and night, before continuing upriver to the port of Manaus.

'It's not much of a hotel,' Alex said with a grin. 'It's more of a primitive guesthouse, I suppose, but good enough for one night. At least you'll have a proper bed to sleep on, not like in that suffocating cabin.'

The hotel was indeed primitive, being no more than a large house, its floor raised on stilts, its roof thatched from the palms of palla trees above unpainted wooden beams, the ventilation supplied by open windows and slow-spinning fans, all of which made a constant, aggravating squeaking sound but at least kept the moist air on the move.

There was no proper reception area, just a spartan lounge leading off to the bedrooms; but, being small, at least it gave Father Benedict no chance to avoid her. Today he looked ghastly, even more ravaged than before, and as Antonio signed them in, Alex leaning over his shoulder, Avril tried to catch the priest's gaze and had little success. He studied the floor, the fan whirring above him, the Indian woman who was brushing giant ants off the steps, and then finally, almost defiantly, he took his hip flask from his jacket pocket, unscrewed it and had a long drink. Only then, just once, did he glance at her, but he looked away quickly.

Having signed in on behalf of them all, Alex and Antonio turned to Avril, the former simply smiling with affection, the latter studying her carefully. Wondering what Antonio had guessed, she felt uncomfortable and nervously lit a cigarette.
‘If your stomach’s upset, that won’t help,’ Alex said. ‘Indeed, it might make it worse.’
‘I don’t care,’ she retorted, her voice edgy. ‘I just feel like a smoke.’
‘So,’ Antonio said, smiling broadly to ease the tension and, with a knowing touch of diplomacy, turned to the puzzled Alex. ‘I think I’ll go out and explore Santarem. What are your plans?’
‘I think Avril should sleep,’ Alex said, ‘and then, if she feels a bit better, eat something this evening, when we all meet for dinner.’
‘At eight?’
‘That’s sounds fine, Antonio.’
‘See you then, my young friends.’
Avril was relieved when they parted, each going to their separate rooms, Antonio and Father Benedict each taking a single room, she and Alex sharing a double overlooking the river. It was a large room, plain and functional, matted carpets on the timber floor, two beds, one double, the other single, both covered with taut white sheets, flanked by old mahogany cupboards and brass-based oil lamps. Huge cockroaches crossed the floor, ants formed lines on the cupboards, bloated flies buzzed frantically below the rotating fan as it made the air swirl. Avril went to the window, saw more ants on the mesh wire, looked out across the green-stained yellow water to the far side’s dense forest. There were floating stores and fishing boats on the river, casting short shadows, the sun being directly overhead, turning the water to polished glass.
‘Is the room okay?’ Alex asked from just behind her.
‘Yes,’ she said. ‘Fine.’
She didn’t know what else to say, so she turned around to face him, letting him slide his arms about her and press his lips to her forehead. She shuddered and held him tight, writhing against him with a sudden onrush of passion, wanting to lose herself in his embrace and have him crush the life from her.
‘Oh, Lord!’ she groaned. ‘Christ!’
And instantly felt ill again, the nausea rising to her throat, the fear impelling her out of his arms and across the room to the double bed. She fell onto it, face down, not bothering to remove her clothes, then rolled over until she was

on her back and staring up at his pale face. He looked deeply wounded, but also bewildered, instinctively sensing that she had shivered with revulsion, trying to understand why. Wanting to tell him, she tried smiling, but then the sunlight hurt her eyes, pouring in through the window behind him, spreading out like a fan, and dissolving him in silvery striations that framed a shimmering haze.

Closing her eyes, she drifted away, lying just below sleep's surface, aware that her body was stretched out on the bed while she roamed freely through her mind. She saw Alex kissing her forehead, his eyes hinting of tears, then he sighed and walked out of the room, closing the door quietly behind him. She was there and yet not there, on the bed, outside herself, and she wandered through the thickets of her thoughts to get at the truth. The fear was still present, almost palpable, permeating her, but then she entered the priest's room, hovering just above his bed, and gazed upon him as he tossed and turned in sleep, his face sickly and terribly lined, the skin almost translucent, as if his skull was being illuminated from within, letting the bones have dominion.

Father Benedict was a tortured man, his anguish eating him alive, but Avril knew, in her troubled thoughts, that what he had told her was not the answer they required, that it was at least incomplete, and that his secret desire for Laura Wellman, his great temptation and torment, could not alone account for the hell that he was putting himself through.

No, it was something else, something infinitely more shocking, some sin that went beyond mere betrayal and scorched the roots of his being. The priest groaned in his restless sleep, tossed and turned on the bed, and Avril, drifting away through a bright, shimmering haze, understood with a fierce, unwavering certainty that his buried truth was a nightmare.

Chapter Eleven

Was she dreaming? She wasn't sure. She recalled Alex leaving the room. She tried to open her eyes, but was blinded by a brilliant light that poured out of the inverted bowl of the sky and made her feel dizzy. Santarem was a jungle town, the river before it, the forest around it, the trees soaring above the houses on stilts and the open-front stores. She saw Alex wandering through it, trying forlornly to pass the time, looking over the mighty Amazon river,

here a patchwork of green and yellow, and thinking of the humus-darkened Rio Negro to which they were heading. She joined him, *became* him, felt what he was feeling, as, surveying the river, watching the fishermen cast their nets out, he was reminded of those similar sights that had coloured his childhood along the banks of the expansive, black river that passed the plantation.

Yes, the plantation, his whole world for eighteen years, a world so removed from the normal that it now seemed unreal. His father, Rollie Thatcher, the many nights spent in that awful living room, old Peruche, squatting in front of his modest hut by the várzea lake, offering magic and the promise of transcendence to the peace of the Otherworld. And then Laura, her stunning beauty, stigmatized by neurosis or tormenting insight, leading him to the brink of madness, the others to slaughter and flight, lowering the curtain, in the lunacy of her convictions, on the dying plantation.

Now Alex was going back there, following Laura's spiritual trail, and each day, as he drew closer, as the rainforest became more dense, as he watched Father Benedict's suffering and wondered what was causing his pain, he felt the weight of what had been done creeping back to torture him.

Being him, Avril knew this, felt it eating at her insides, but then, as the sun flashed off the water, she returned to herself.

'Avril! *Avril!* Waken up! You're just having a bad dream!'
She awakened, groaning fearfully, Alex trying to hold still her frantically waving hands, trying to stop her from hurting herself as she tossed and turned on the bed. The sun was no longer shining, the pale light came from the oil lamps, and the fan in the ceiling just above Alex's head was squeaking with aggravating insistence as its blades, rotating slowly and steadily, cast long shadows on the walls where chameleons, with a speed that made her blink, raced to and fro.
'What?' she cried. '*No!*'
Alex shook her awake, then calmed her down, holding her tightly, and she felt his ribs through his thin shirt, her fingers pressing him urgently. Her heart was beating too fast, her skin was sticky with sweat, and she realized that she

had slept all afternoon, having the most vivid dreams. Eventually, when her racing heart had settled, she slumped back against the headrest, thoughtfully studied Alex, saw the anxiety on his delicate good looks, and forced herself to smile at him, not wanting him to know just how haunted and frightened she felt.

'Oh, dear,' she said, 'bad dreams! I should never sleep in the daytime. I should have known better.'

'You've been sleeping for six hours,' Alex told her. 'It's now seven-thirty.' He was smiling, but his eyes were puzzled, as if he didn't quite know what was happening, and Avril, recalling the strange light as well as the vivid dreams that had started haunting her, felt the need to protect him as much as possible from what she sensed might be coming: some truth that would not spring from magic, but from Father Benedict's buried past.

'Lord!' she said, trying to sound as normal as possible, ashamed of her false smile. 'I'd better have a quick bath and get myself dressed.'

'You won't find a bath here,' Alex said, 'but you *will* find a rather primitive shower just outside the room.'

'I can brave that,' she said.

The shower was indeed primitive, both taps offering lukewarm water, but it still helped to waken her up and make her feel more refreshed. She put on a simple dress, flat shoes, a simple necklace, combed her hair and applied a little lipstick but no other makeup. Alex watched her the whole time, sitting under the squeaking fan, his blond hair tumbling over his forehead, his shirt collar fluttering. He didn't say a word, but she sensed his anxiety and was relieved when they could leave the dimly lit room and join the others at the table in the rickety lounge overlooking the river.

Outside it was dark, the moon reflected in the water, candles flickering from the porches of the houses on the slope just below them. Seeing the river, Avril shivered, remembering the light above the boat, then she looked at Father Benedict and saw that his condition hadn't changed. He had been drinking a lot and was looking ghastly, his face haggard, his eyes bloodshot and unfocused, his right hand shaking when he picked up his fork or, as he did more frequently, raised a glass of red wine to his lips. It was an uncomfortable dinner, with a lot of strained silences, and finally, after too many failed attempts to lighten the evening, Antonio sighed loudly and clasped his hands under his chin.

‘I’ve been watching you two,’ he said, ‘and you’ve been acting strangely. There’s something going on that neither Alex nor I are aware of… So what’s happened?’
Father Benedict had just been having another drink of wine and now, hearing Antonio’s question, he wiped his lips with the back of his hand, put his glass on the table and stared directly at Avril.
‘Well?’ he said, ‘shall you tell them or shall I? Or are we keeping it secret?’
‘There’s nothing to tell,’ Avril heard herself saying as she glanced appealingly at Alex, not wanting him to know that she believed Laura was calling out to her. ‘We just saw a strange light over the boat and didn’t know what it was.’
‘A *strange* light?’ Antonio asked.
‘Yes, Antonio, a strange light. It looked like a ball of burning gas – and probably *was* something like that.’
Suddenly outraged, Father Benedict slammed his open hand down on the table, making the plates and glasses rattle, forcing them all to look at him.
‘Damn you, woman!’ he exclaimed. ‘Why not tell the truth? We did *not* see a ball of burning gas and you bloody well know it! We saw something unexplainable, something unearthly but controlled, a globe of spinning light that resembled an enormous eye and flew quite deliberately out of the rainforest to hover right over us. It terrified both of us, it sucked the breath from our lungs, and it looked just like those lights that rise and fall where the Yano are said to be. A ball of burning gas? Then why are you frightened, Avril? Damn it, *tell them the truth!*’
He slapped the table again, making everything rattle, while remaining in his chair, leaning forward, almost threatening, glaring ferociously and visibly shaking. Then Avril heard her own voice, surprisingly angry and even venomous, bursting from her lips before she could stop it.
‘*What* truth, Father Benedict? That a ball of light harassed us? What *else* can I say about what happened, except that we saw it? It could have been marsh gas, some reflection… *It could have been anything!*’
‘That’s ridiculous and you know it! That light searched for us and found us. That light – that *thing*, whatever it was – came to frighten us off! We’re all trying to challenge the forces of darkness and we won’t get away with it. We have to turn back – *turn back now!* – before it’s too late.’
‘No!’ Avril retorted, slightly shocked by her own bitterness. ‘We don’t have

to turn back. You *want* us to turn back because there's something you're frightened of facing… It's *you* they're looking for – not us!'
The priest seemed to freeze at that, his body tightening like a bow string. He stared at Avril as if seeing someone else, then suddenly stood up, his chair crashing back into the wall, and finally, with a peculiar, choking sound, rushed away to his room.
Avril glanced from Alex to Antonio, then lowered her eyes, chilled by the silence that was only broken when Antonio sighed again.
'So what makes you think they're pursuing Father Benedict?' he asked.
'I'm not sure,' Avril said, this not being a complete lie. 'I just think that Father Benedict's being tormented by something he refuses to talk about.'
'And the light?' Antonio countered carefully. 'You really believe it was nothing?'
'I think it was very odd,' she replied, 'and I'll admit that it frightened me.'
Seeing Alex's bewilderment, she was relieved when Antonio spoke again, his voice soft and kindly.
'Atmospheric phenomena,' he said. 'Shall we leave it at that?'
'Yes, damn it,' Avril replied, despising herself. 'That was probably it.'
'And was there anything else?' Alex asked, sounding strained. 'Anything else that you may have experienced but kept to yourself?'
'No,' she lied. 'Not a thing.'
Though feeling guilty, she simply couldn't bring herself to mention her dreams, or visions, of Laura Wellman. Instead, she simply stood up with as much grace as possible and said, 'This whole business is starting to exhaust me, so I'm going back to bed.'
Alex glanced at Antonio before managing to meet her gaze, then he shrugged and also stood up, placing his hand on her shoulder.
'I'm coming with you,' he said.
Leaving Antonio alone at the table, they returned to their room where Avril, frightened of falling asleep again, deliberately lit a cigarette. She turned her back on Alex, wanting to conceal her fear from him, and crossed the room to stand by the window and look over the river.
The sky was filled with low, heavy clouds that obscured the moon and stars; the river was an immense blackness that disappeared both east and west, into the even deeper blackness of the silent rainforest surrounding Santarem. There was no chattering here (the animals, unless desperately hungry, stayed

well away from human beings) and the lack of noise encircling the entire town seemed to reverberate in some ghostly manner.
Avril shivered and blew smoke, hearing Alex coming up behind her, then she felt his arms slipping around her as he pulled her back into him.
‘Are you sure there wasn’t anything else?’ he asked. ‘If there was, you can tell me.’
‘Why would I not tell you if there was?’
‘Because you might try to protect me.’
‘Protect you from what?’
‘I don’t know. That’s for you to tell me.’
‘There was nothing else. Nothing.’
‘All right,’ he said, ‘come to bed. Let’s try to forget everything for one night – before we get on that boat again.’
She knew what he meant and was touched by his need, stubbing her cigarette out in the ashtray on the cupboard beside her, then turning around to slide her tongue between his lips and press herself tightly to him, letting him know with every movement of her body that she felt the same way. He responded with a shudder, his hands sliding over her breasts, his weight forcing her back into the wall as his mouth bruised her lips. She pushed him away and then unbuttoned his shirt, heard the zip on her dress opening, felt the dress falling off her shoulders as she unbuttoned his trousers. Then her thoughts went out of focus, were suffused by desire, and she found herself, limbs akimbo, stretched out on the bed. He was lowering himself on top of her, the mosquito net fluttering around him, the blades of the fan rotating directly above him, various insects being battered in the minor turbulence. He entered her – Alex entered her – flooding her insides with heat, and then whispered words she couldn’t quite hear as she melted around him…
That noise! *What* noise? She was jerked back to reality, to the awareness of their separate bodies, cocking an ear as Alex moved in and out, wondering what she was listening for. Opening her eyes, she saw a white gauze, something spinning above it, recognized the fluttering mosquito net and the rotating fan. No, not the fan – it was rotating too fast for that. It was something else spinning above her, growing brighter, expanding.
‘Oh, God, Avril, I want you so!’
She closed her eyes and gripped him fiercely, clinging to him with arms and legs, trying to hold back her nausea and dread at what was happening again.

She was Avril (*I am me!*) and she fought to retain this knowledge, hearing the drums, seeing the lights rise and fall over that great, star-flecked canyon. Alex was gasping, cleaving to her (*my Alex, on top of me!*), thrusting deeply and expanding up through her insides to make her flesh turn to liquid. She wanted to do that, to dissolve, find obliteration and freedom, but then Laura, her voice resounding with pain and fear, seared through the ether and touched her.

Someone screamed – Avril screamed – and tried to push Alex off her, opening her eyes to look up at his stunned eyes as he hastily withdrew from her. He was supporting himself on his hands, his spine curved, his muscles tight, and above him, above the wildly fluttering mosquito net, was a whirlpool of brilliant, shimmering light, its vortex like the pupil of a giant eye, dark and malevolent.

'Oh, my God!' she heard Alex exclaim in terror. 'It's Laura! *You're Laura!*'

At that very moment, as Alex let out a strangled groan and hurriedly rolled off her body, as the spinning light above grew dark and faded away, leaving only the revolving, squeaking fan, Avril remembered all the times in London when she and Alex had tried to make love – all those times when he had started and then cried out in horror and, because of the visions he had suffered, was unable to finish – and, in that recollection, finally understood fully what it was that had affected him so badly.

Chapter Twelve

'You saw Laura? You thought I was *Laura*?'

'Oh, God,' he groaned. 'Yes!' He looked completely dazed, and then, his eyes widening, grabbed her by the shoulders and squeezed her until she hurt. 'Damn it!' he whispered fiercely. 'I knew it. I just *knew* it! You've been having the same dreams as I had and were frightened of telling me. You can see and feel what happened to her. *Damn it, isn't that true?*'

'Yes, Alex, it is.'

He released her shoulders and sat back, at once

shocked and filled with wonder. Then a sudden hammering on the room door made both of them jerk upright, Avril automatically covering her body with the sheet as Antonio's voice, unusually loud and frantic, rang out from the hallway.

'Alex!' he shouted. 'Avril! Come quickly! It's Father Benedict! *Come now!*'

They glanced briefly at one another and then rolled off the bed, hurriedly putting on the clothes they had just taken off and then opening the door and running to Father Benedict's room. The priest was huddled up on the floor, in the corner nearest the door, his body shaking and his face bathed in sweat, the light of an oil lamp sending shadows across his wild eyes as he pointed a trembling finger at the bed he had just fled. 'It was her!' he exclaimed. 'Beside me! In that bed! *Upon my soul, it was Laura!*'

'Your bed?' Alex asked with a breaking voice.

'She was there in *your* bed?'

'Oh, God, yes… *She came back to me!*'

Given his lacerating grief and despair, there could be no doubting what he had meant by those words; and Alex, in the silence that dropped like lead between them, glanced from Avril to Antonio before returning his attention to the priest.

Father Benedict turned away, burying his face between his raised knees, his body shaking until he managed to control himself and lift his head up again. He wiped his bloodshot eyes, using a shaky right hand, then sniffed and slowly looked up at Alex, mutely begging forgiveness.

'I couldn't help myself,' he said, his voice as dry as broken bones, his hands weaving arabesques in the air, exorcising his demons. 'Oh, of course I tried at first, both for myself and for you. Believe me, Alex, I loved you like my own and broke my heart worrying

over you. Yes, I was concerned for you, loathing your father for mistreating you, thinking of you as the son I never had but always secretly wanted. But that wasn't enough. I wasn't prepared for my lust and vanity. I only knew that I was faithless, that I felt I'd betrayed my calling, and that the minute I laid eyes on Laura, I wanted her desperately. Yes, oh dear God, and the wanting was like pain, something leading to selfdeceit: a most pitiful belief that to have her would resurrect the moral strength I'd lost and cure my broken spirit. I wanted her with the base and craven lust that comes to those who need a new life.' The priest was breathing harshly and had to sniff his tears back, rubbing his eyes with the fingers of a shaking hand and taking deep, gasping breaths. The flickering light was bleeding over him, etching his eyes in deep shadow, covering his skin in darting black lines that looked like ants on an anthill. 'Did I betray you, Alex? Yes, but not deliberately so. There was no calculation in what I did: there was nothing but guilt. Indeed, I suffered the fires of hell, wanting her so much, thinking of my calling, thinking also of you and of the trust you'd placed in me, knowing that the very need to possess her was a betrayal not only of my faith, but of my friendship and paternal love for you. Oh, yes, I felt guilty, and my shame was like a Purgatory, but the day after she had you – when you both lay on that raft – yes, the day she told me about it, hoping to expunge her guilt and shame – for indeed, Alex, she sincerely felt both – that day, when I learnt what had happened, was the day of my downfall.'

When he looked at Alex, his eyes were like the moon: reflecting light that showed only dead soil. 'Do you understand, Alex? I was hopelessly addicted to her. To the eyes of the world I was an ordained man of God, but to myself, in the penury of

my nights, I was a man of the flesh. Yes, I lusted for the forbidden, for earthly luxuries and pleasures, for the satisfaction of my frustrated desires and longings and needs – and then, in the presence of Laura, the one person who recognized me for what I was, who knew how weak I was and how far my faith had fallen, and who, just like me, was in need of the love that she'd never been able to fully accept – yes, in her presence, and totally blinded by her beauty, I understood that what I felt would be returned if I could just let it happen – for in truth, if she knew what I felt, I also knew what *she* felt. And so, Alex, when she told me what had happened on that raft, when she told me of your magic and of how she'd lost control of herself, I, too, lost control and myself and surrendered to my desires.'

He let his breath out, stopped breathing for a moment, then put the back of his head against the wall and took a deep breath. His face was turned up to the ceiling, but his eyes were now closed.

'And I, a priest? Ah, yes, that was the rub! And what made it perversely ironical was that this woman, this creature I was lying down with, might be possessed by the devil – or by what she described as the forces of darkness… Oh, Lord how I wondered about that! Why her, of all women? And often thought that perhaps it was because I was challenging the God I'd come to mistrust. But, no, I couldn't accept that. My love was too deep for that. So I came to think that possibly the devil had given her to me to tempt me. I was filled with fear, then, but also with delight, for indeed, if I'd lived in servitude to a God I'd never fully accepted, then surely my unbridled passion for a woman who believed herself to be possessed by Satan, merely confirmed, with diabolical exactitude, where my true sentiments lay. Yes, Laura was obsessed with the idea of evil, and I was obsessed with her, and if, in embracing her, I was also embracing evil… Well, then, so be it.'

He leaned forward, breathing deeply, pressing his hands against his temples, then spoke in a low tone, almost whispering, directing his words at the floor. ‘When you came to me that night,’ he said, clearly referring to Alex, ‘when you told me you loved her and wanted to take her to England with you, I knew that something had happened between you – something more than just words. And so, the next evening – knowing that Laura would leave the mission the following day, inflamed by the thought of what she’d done with you, and, perhaps more dangerously, jealous at the thought of her moving into your father’s house – I demanded to know just what had happened between the pair of you on that raft. And, of course, when she told me, almost in tears and clearly ashamed of herself, I gave her a tongue-lashing – oh, my God, what a hypocrite! – and emphasized, in particular, that she happened to be twice your age and so had no excuse for what she’d done. She cried at that, her tears falling like rain, but then, when I reached out to embrace her, about to pretend that I merely wanted to comfort her, she stepped back and looked at me with the most awful perceptiveness, and said – I will never forget this – she said, ‘What do *you* want?’ And so, shocked to hear her ask that, humiliated by her intuition, I nonetheless blurted out what she’d known all along: that I wanted *her*, no matter the cost. And then hearing her saying that she also wanted me, pulled her to me where we stood in her room – the very room where Father Symonds, that finer man, had spent so many years – and then we fell on the bed.’ Father Benedict raised his head to look directly at Alex, and his eyes, which before had looked like stone, were filled with a light that shone though his tears, silently begging for forgiveness.

‘I had her,’ he confessed. ‘In shame and guilt, I

had her. The first time was the night before she left the mission for the plantation – the very thought of you and her on that raft had inflamed me; while fear of her being near your licentious father fanned the flames even higher – and thereafter, during those times when she left the plantation, when she stayed away all night and later claimed she'd been drunk, I had her on the ground of the forest around the mission, in the back of the mission's truck when I'd driven somewhere to meet her, sometimes even in shabby hotels in Manaus, in areas where my face was unknown… Do you understand, Alex? She loved neither you nor your father. She and I had one another with a passion that obliterated all reason. Laura Wellman loved *me* – and I, her… And may God forgive both of us.'

Chapter Thirteen

Once the boat left Santarem, it seemed to leave civilization completely, the river narrowing until nothing could be seen but the solid leafy wall of the Amazonian rainforest, the clouds black and thunderous, hanging low over the trees, making it appear that the boat was travelling forever along a silent, sullen, monotonous tunnel, the walls of which, shifting subtly through various shades of brownveined greenery, offered little variety and gave rise to constant, oppressive gloom.

Either standing by the railing or sitting at the table to eat and drink, Avril felt the oppressiveness hanging over her and enslaving her spirit. She could not forget what the priest had told them, nor the sight of Alex fleeing the stifling hotel room, nor the rest of that sleepless night during which, with heavy heart, she had held Alex tightly in her arms while he wept over his betrayal by his formerly trusted friend, the priest, and vowed repeatedly that once this journey was over, he would never see him again.

Now Avril was watching both of them, as, also, was Antonio, aware that they were both in a bad way and could behave unpredictably. Alex already seemed

totally different – his silence as sullen as the passing rainforest, his contempt for Father Benedict all too evident when their eyes met – while the priest, in a bad state anyway, was rapidly becoming worse, hardly ever leaving his cabin, constantly ordering more *caipirinhas* from the bar, and, according to Antonio, mumbling a lot to himself and even weeping in private.

She tried talking to Alex, telling him the priest hadn't betrayed him, trying to explain that his, Alex's, particular brand of trust had left no room for human weakness, and that the priest, being no different from Alex, had been unable to help himself; but Alex's shock went too deep, his sense of betrayal was too acute, and he could only respond with a venom that disguised his true pain.

'I hate him,' he said. 'What he did to me was unforgivable. He acted like a surrogate father to me and all the time, when I thought he was concerned for me, he was merely plotting to steal Laura from me.'

'That isn't true,' Avril said. 'And deep down you know it. He cared for you then – and still cares for you now – and when he warned you against Laura, trying to make you see sense, he did so because he knew that she was only trying to humour you, that she only loved you in a platonic fashion, that her real love was actually reserved for him and, finally, that sooner or later, if you didn't accept reality, you'd get hurt way past what you could bear. In the event, it turned out that without actually meaning to, she drove you nearly insane.'

'I almost went insane because of Laura and my father,' Alex said, 'after I saw them embracing in his bedroom and knew, contrary to what the priest believed, that it was him, my father, who she'd rejected me for. Oh, yes, Father Benedict wanted her as well – and no doubt he did with her what he said – but Laura also had an affair with my father, which is what most torments the priest.'

'The priest is tormented by guilt because he thinks he betrayed you – and you, who should forgive him for what he did, are only making it worse.'

'No, he's tormented because Laura betrayed him with my father, as the three of them secretly betrayed me while pretending to care for me.'

‘You’re exaggerating everything, Alex.’
‘I’m just facing the truth.’
In fact the truth seemed more elusive with each

fresh revelation, retreating behind walls of human pain and distorted perspectives. What had Laura really felt? Whom had she really loved? Had she truly loved the priest and only dallied briefly with Alex’s father, or had she simply played one against the other for amusement or spite? *Diabolical possession*, Avril thought. *Perhaps she was possessed after all, and, as a devil’s disciple, took pleasure in seducing the priest*… A possibility, just one – there were others just as likely – and Avril, watching the priest destroying himself with endless drinks of *caipirinha*, found her thoughts spinning in circles as the answers eluded her.

‘What do you think, Antonio? You were there at the time. What pieces from this puzzle are missing?’
Antonio shrugged, a bewildered smile on his handsome face, his brown eyes gazing out at the passing rainforest as it closed in with every passing minute. ‘I don’t know,’ he said. ‘I only knew about Alex: that he was obsessed with a woman whom I felt might be insane, and that she, after she came to take residence in Frank’s Poulson’s house, spent a lot of time with him and that pig, Rollie Thatcher. I didn’t know about Father Benedict – he kept his passion for her well hidden – and I certainly couldn’t say with any conviction that Laura and Alex’s father, no matter how much they sexually teased each other, actually went as far as having an affair. But if Alex says he saw them embracing, then I’m sure he did so. He isn’t capable of lying.’
The boat continued its journey, pushing against the lazy current, the formerly faraway banks coming closer with each passing hour; but once past Obidos, well away from Santarem, the river narrowed more dramatically, sometimes resembling an *igarapé*, the trees almost touching both sides of the hull, with furred sloths, clearly visible, hanging upside down from the branches, and the black holes in the enormous tree trunks, which rose out of the water, housing the fierce, stinging fire-ants or large, venomous spiders.
Avril blessed such sights, studying the forest for distraction, taking pleasure at being cast from her urban roots to this equatorial environment. The banks

were lined with the high grass which, Antonio informed her, was called *canarana*; and in the dark pools of the swamps and tributaries she occasionally saw caimans, water birds and *capybaras* – or, like something created by Walt Disney, the fat, ugly *manatee*. It was an alien, exotic world, but one that cast a dark spell, and by the end of the first night, when the mysterious light returned, she knew that as Father Benedict had warned there would be no respite.

Alex slept like a log that first night, as if exhausted by his own bitterness, but Avril was awake when the light came to shine through the porthole window where, since they had disembarked at Santarem, the passenger who had formerly been in a hammock could not block the view. Once more she was terrified, her objectivity failing her, the nausea rising from her stomach and almost making her choke. The light was powerful and dazzling, painting the tiny cabin in shimmering silver as, wanting to scream but abruptly struck dumb, she again saw every loose object in the room drifting into thin air. Impulsively, she jerked upright – at least felt herself trying to do so – but realized instantly that she hadn't moved, that she was completely paralysed, and that the air was being sucked from her lungs at a dangerous rate. Then, as she stared above her, at the base of Alex's bunk-bed, hearing him groan in a sleep that though troubled was unbroken, she sensed that she was being pulled upward by some malevolent, unseen force.

Her terror increased, making her head spin towards delirium, and then her sheets began to whisper, rippling and rising up about her, and then she herself started rising, floating mysteriously in midair, and kept doing so until stopped by the base of Alex's bunk-bed, after which she couldn't possibly go any higher, her face pressed to the wood base.

She remained there for a long time, pressed to the base of Alex's bunk-bed, the sheets fluttering around her, while the light, blazing through the porthole window, seemed to spin like a whirlpool. Fear was her sole reality – all the rest was hallucination: the cabin expanding and contracting, the stars visible through the light, the great hole that opened out in the wood base of the bunk-bed above her to reveal the receding funnel of a cosmos and the eternal darkness beyond. Avril screamed – or tried to scream – her body shaking with the effort, but then she began to black out, to spiral down through her deepest self, and then awakened, lying back on her own bunk-bed, the rumpled sheets soaked in sweat.

Chapter Fourteen

If Alex now despised the priest, his love for Avril was not diminished, and when he saw her that morning, soaked with sweat on the dishevelled bunk-bed, the floor of the cabin littered with all the loose items – toothbrushes and combs and towels and their scattered clothing – his concern was clear sharpened by the fear that she was truly in danger.

'Throw that amulet away!' he said. 'That damned thing is what guides them to you. As long as you keep it hanging around your neck, you'll be a magnet for trouble.'

'No, Alex,' she retorted. 'We have to finish what we've started, and this amulet, according to Peruche, can also protect us. Do you believe in the forces of darkness? Do you believe they're pursuing us? If you do, then why are you complaining, since they're what we're seeking to find? Yes, I can hear Laura – and see her and feel her – and because of that, because she seems to be calling to us, I can't give up the amulet. Do you want to find the Yano and, possibly, Laura? *Then I must keep the amulet!*'

That same morning the priest emerged, his face as white as a sheet, shaking as he queued up at the cookhouse for a mug of black coffee. He sat beside Antonio, facing Alex and Avril, his fear helping him to ignore Alex's contemptuous glance as he stuttered his words.

'It gets worse,' he said. 'Every night is more terrible. Last night, in that cabin, in that damned tomb of a cabin, I woke to find the darkness like daylight and feel something on top of me. I couldn't see it – I just *felt* it – but my God it was awful: something immensely strong and malevolent that seemed to be choking me. No air! I was choking! I had the feeling that I was drowning. Either that or I was gradually being crushed out of existence… And then I saw her again – yes, Laura, right there beside me – and she was covered in slime – it looked like mud and blood – and she reached out and tried to pull me to her and then I blacked out. God, dear God, I need a drink! I won't sleep there again!'

He left the table and wandered away, taking himself to the stern of the boat, having little trouble wending his way past the other passengers since most of them had already disembarked, some at the large towns of Santarem and Obidas, a few at impoverished waterfront villages, or at rickety jetties that appeared to lead to nowhere. Now the boat was almost empty, a pervasive silence hanging over it, leaving the priest with plenty of places to hide away and imbibe more *caipirinha*. Avril watched him disappearing, the deck swaying gently under him, then she turned to glance at Alex, still seated beside her, and finally fixed her gaze on Antonio at the opposite end of the table. The Brazilian was no longer smiling and he seemed truly weary.

'So what happened to you, Antonio?'

'Nothing, Avril. Not a thing. I slept like a baby all night and woke up refreshed.'
'You don't look refreshed.'
'Looks are deceptive.'
'Avril had a bad time,' Alex said, 'but I slept through it all. I had bad dreams – about the jungle, about the rising and falling lights – and I think Avril was in the dream somewhere, but I can't be too sure. Apart from that, though, I slept on and was untouched, while Avril actually levitated, she believes, along with everything else.'
Antonio sighed. 'We can't ignore it anymore,' he said. 'We're all caught up in something we can neither comprehend nor control – and given what I know of Indian witchcraft, it could be highly dangerous.'
'Do you believe,' Avril asked, directing her question at both of them, 'that the Yano are really involved with that light and what it can do? Do you really think they can reach us when we're here, still hundreds of miles away?'
'Yes,' Alex replied instantly, firmly. 'I've no doubts about it at all. I know what *I* was capable of when *I* had the power – and I was, after all, just a beginner, on the ladder's first rung. But Peruche's powers were awesome, though even he was no master, and according to him the members of the Yano tribe, the dispossessed ones near the Gateway to the Otherworld, could, being the instruments of the forces of darkness, wreak diabolical havoc of the most frightening kind. So, yes, believe the Yano are behind these recent hauntings… I'm convinced they know we're coming.'

‘And you, Antonio, what do you think?’
This time the Brazilian shrugged. ‘I stand with Alex. From what I know of Indian magic – and I saw a lot when I was younger – I’m convinced that they do have real powers of the kind we don’t understand. And if, as is widely reported, the Yano’s powers are greater than normal, then those powers could be remarkable indeed, capable of defying time and space, to travel as far and as quickly as needs be.’
They all drank a lot that evening, sitting at the long table, Father Benedict obliterating himself in order to ignore Alex’s contempt, Avril drinking to steady her nerves for the forthcoming night, and Antonio trying to draw them closer together with light conversation. The clouds returned to hide the stars, there was a quick, savage rainstorm, then the clouds moved away behind the silhouetted jungle canopy, letting the moon illuminate the water and streak its black-flowing, rippling surface with wavering lines of silver.
Antonio was the first to go to bed, saying he still preferred his cabin, but Avril knew, as she watched him leaving the table, that no matter how drunk she was, she would not be able to spend one more night in her own cramped, haunted cabin.
When she told Alex, he flinched, glancing distastefully at Father Benedict, but the priest, possibly exhausted by fear and alcohol, was already asleep, his clasped hands acting as a pillow for his forehead, his body, leaning across the table, twitching spasmodically.
‘Help him,’ Avril said. ‘Tomorrow. Try talking to him.’
‘No,’ Alex said.
She slid away from him, then swung her legs onto the bench, and finally, turning sideways, rested her head on his lap. She felt him hardening against her cheek, and smiled, amused by it, then closed her eyes and let the night surround her with the promise of sleep.
This time, when the magical light returned, Alex saw it as well, his shocked *‘Oh, my God!’* making Avril open her eyes and look up to see that brilliant, spinning eye directly above her. Someone screamed and she jerked upright, staring wildly along the deck, and saw some members of the crew, standing close to the railing, waving frantically and pointing at the light as they backed away from it.
Glancing at Alex, she saw his wide eyes, then the priest looking fearful. Hearing another scream, she stared along the deck at the panic-stricken

crewmen. One of them was on his knees, gripping the railing with one hand, screaming dementedly as he stared up at the dazzling light swirling fiercely above him. There was noise… no: a vibration… an unreal *feeling* of noise… and then some oil lamps exploded, the flames racing over the deck, and the other crewmen screamed in terror and jumped overboard just before the flames reached them. The kneeling man was engulfed, the flames seeming to explode around him, then Avril heard his screams drowned out by her own screaming as Alex instantly jumped to his feet and ran to the railing.

She followed him automatically, scarcely thinking about it, and then joined him at the railing to look down at the men in the water. The swirling light remained above them, illuminating the river, and then it seemed to expand, stretching across the whole boat, and the water in the river, which had been smooth, started roaring and bubbling.

Glancing back over her shoulder, Avril saw the burning man falling sideways, his body just a bundle of charred rags in a pool of small, still flickering, flames; then, as other flames appeared, as the fire extinguishers burst into action, she looked back down at the river, saw the water boiling furiously, and then, to her horror, as the swimming men called out for help, she saw a mass of gigantic snakes, all nearly thirty feet long, coiling and uncoiling and wriggling over the electric eels which, racing through the boiling foam, managed to reach the men first. The men's screaming was truly terrible, lacerating Avril's ears, and then she saw them catapulting, their bodies spinning like rag dolls, before crashing back down into that hideous wriggling mass and disappearing into the snow-white foam as the darkness returned.

She stood there, aghast, and then was pulled away by Alex, letting him drag her back to the table where the priest was muttering incessantly, only stopping, whenever he found the breath, to take another drink from his hip flask. Avril looked up at the sky, blinked and rubbed her watery eyes, looked again and saw only the clouds moving over a full moon. There was shouting and hissing, the sound of feet on the deck, and the foam of fire extinguishers, like milk on the boil, splashed over the flickering blue flames and the charred remains of the dead man.

She was shivering and felt cold, yet had to wipe sweat from her brow, and noticed that Alex was also dripping, his face as white as that of the priest who was standing behind him. The shouting continued, there was even more foam

on the dark deck, and the surviving crewmen, all chattering excitedly, were either staring over the railings at the river, now calm, or pointing up at the sky.
Avril groaned, hardly knowing she was doing so, and then leaned against Alex, this time resting her cheek on his trembling shoulder and sliding her right arm around him. She remained there, not saying a word, until the dawn light broke through.

Chapter Fifteen

Antonio joined them for breakfast, looking the ghost of his former self, listening patiently as Alex told him what had happened during the night and then confessing that he, too, had seen the swirling light.

'But when I tried to leave my cabin, I couldn't open the door. It was locked securely. The key just wouldn't turn – at least not until I tried it this morning, when it was working perfectly.'

Father Benedict was eating dry bread and washing it down with beer, and now, as if talking to himself, said, 'God forgive me. It's *me* they're after. I'll never be forgiven for what I did until I give myself to them… or until they manage to steal my soul.'

Avril was startled, touched again with intuition, convinced that his confessions so far were only part of the whole. And then, with a sudden rage that surprised her even as she spoke, she hammered her clenched fist on the table and shocked the priest to attention.

'Damn you!' she snapped. 'Tell us the rest! Tell us what you're still hiding!'
'No!' the priest exclaimed. 'There's no more! *I've told all I can tell!*'
He kicked his chair back as he stood up, swaying slightly from side to side, and then, with another choked sob, turned away and disappeared down the steps that led to the lower deck. Avril stared at Antonio, at Alex, then at the river, noticing how colourless it looked in the pearly light of the morning.
'God,' she said, 'this journey is interminable. I'll be glad when tomorrow comes.'

Later the sun came out, at first bleeding down weakly, then breaking through the disappearing clouds to make the day dazzling and fiercely hot. The river looked like a sheet of glass, a mirror winding through walls of greenery, reflecting the cecropia trees and the bizarre, writhing lianas, the sunlight turning the gently rippling water to silver where alligators, anacondas and giant eels glided close to the banks.
Avril felt that she was dreaming, that reality was dissolving around her, making it difficult to distinguish between the actual and what might be a mirage. She thought of the journals of Alfonso Carvajal, of his hallucinatory descriptions – royal highways through the jungle, great white riverbank cities, the fair-skinned female warriors who fought with terrible ferocity and after whom Orellana had named the river – and understood why he'd written so, since, with the sun overhead, blazing down in dazzling splendour, the numerous reflections from the vitreous water began distorting all she saw, making tributaries and várzea lakes shimmer above the far horizon, the odd collections of riverside shacks materialize as gilded cities, and domesticated animals in forest clearings look like giant, prehistoric beasts. And then, towards evening, just as Alex had prophesied, the happenings became even more dramatic and reality turned to a nightmare.

Chapter Sixteen

The river tapered away in the distance, winding between green walls of forest, and from out of a clear sky, above the canopy of the trees, came a great boiling mass of black clouds and a cold, whipping wind. Father Benedict saw it coming, his lips trembling as he groaned, and when Avril reached out to touch him reassuringly, he twitched as if whiplashed. Thunder rumbled as the clouds approached, lightning darted through boiling greyness, and Alex, as the wind slapped his face, shook his head disbelievingly. The thunder rumbled again, black shadows raced along the river, the boat was plunged into a semi-darkness and then the rain fell.

The other passengers ran for cover, sheltering close by the cabins, as the rain fell in unusually large, glistening droplets which, splashing heavily on the deck, quickly soaked Avril. She cupped her hands across her forehead, protecting her eyes as she looked up, but the rain, turning into enormous

hailstones, forced her fingers apart. She heard the sheltering passengers shouting, their words clashing in Portuguese, and then they began scattering, some clearly frightened by the unfamiliar, and then there was a high-pitched, female scream that lacerated her eardrums.

'Hailstones!' Antonio bawled. ' *Hailstones in Amazonia!* It must be starting again!'
She saw his brown eyes squinting, the hailstones exploding over his shoulders, then Alex grabbed her hand, shouting something about 'shelter', and started dragging her through the windwhipped, lamplit darkness toward the rear of the cabins. She heard the woman screaming again, a sound of pure, mortal terror, and wondered briefly if it signified a phenomenon even worse than this miraculous storm. Something light fell on her shoulder, dropped on her foot and fell away; she glanced down and saw nothing but the dark deck, then Alex pulled her close to him.
'Oh, Christ!' he said softly. 'What…?'
The boat was shuddering violently, its engines roaring to no avail, and then its stern turned towards the port side until, with a more violent, convulsive shudder, it came to a halt. Avril glanced over the railing, saw a wall of broken tree trunks, the water pouring over numerous gnarled branches and around the hull of the boat.
'I don't believe it!' Alex exclaimed. 'The boat's stuck in those smashed tree trunks. How on earth did they all bunch up there? It just isn't possible.'
The thunder roared, the lightning flashed, the hailstones changed back to rain, a woman screamed and something light dropped on Avril and bounced off her shoulder. She looked down and kicked at it, automatically, her skin rippling, and saw the scrambling legs of a giant spider as it hurried into the darkness. Another appeared on the deck, then another, and another; the same woman screamed and something light fell on Avril's shoulder and she slapped it away.
'Christ!' It was the priest. He was pressed against the outer wall of a cabin, wriggling frantically and slapping at his body as huge spiders dropped onto him.
Revulsion made Avril burn and she quickly looked above her at the overhanging branches of the tall *sapopema* and *acacuzeiro* trees from which, when the trapped boat hammered against them, the enormous spiders were

falling. Another landed on her head, fell onto her shoulder and bounced away, and she screamed instinctively, fear and revulsion whipping through her, but managed to choke it back as Alex pulled her to the stern of the boat, which was, from what she could discern in the darkness, reasonably clear of the riverbank and its overhanging branches.

They found Antonio there, huddled up with some other passengers, the rain still pouring out of a pitiless sky and splashing harshly upon them. He pointed obliquely with a wavering hand. Avril looked up to see a pulsating, disc-shaped light shining through the black clouds.

The thunder roared again, the sound too loud to be natural, then jagged bolts of lightning, darting down from the stormy sky, exploded over the funnel of the boat and crackled down to the deck. Glass shattered, men bawled, women screamed, an oil lamp fell and burst into flames, and then a snake, long and heavy, its body slick with river slime, slid silently over Avril's foot and headed for those just behind her.

She tumbled into real terror, breaking free from Alex's grasp, the scream that she had stifled now daggering out of her throat as Alex managed to grab her again. Spinning around, she fell into him, burying her face in his shoulder, unable to stop her body's panic-stricken convulsions and her loud, broken sobbing. He held her, rocked her, covered her ears as others screamed, as the thunder roared and the lightning flashed and more snakes dropped on the deck, their bodies making squelching sounds that made her skin crawl.

Then the thunder and lightning stopped, the rain ceased to fall, the boat broke free from the smashed tree trunks, she felt the deck heaving under her feet as the engines pushed it away. Alex was stroking her hair and whispering encouraging words, his hands squeezing her reassuringly, then he led her away, set her down on a bench, kept whispering endearments to her, until eventually she managed to sniff back her tears and look fearfully about her.

The night around the boat was quiet, but the boat was still in chaos: the passengers bawling or screaming, running hysterically this way or that, some shrieking and wriggling as they avoided spiders or snakes, the crewmen hurrying to and fro with sticks and brooms, sweeping the dangerous creatures off the decks and back into the river.

Avril watched it all, mesmerised, hardly believing what she was seeing, then glanced up at the sky, saw the stars and a full moon, then shuddered, closed her eyes and pressed her face into Alex's shoulder, appreciating the warmth

of his familiar skin as she drifted into an uneasy sleep.
She dreamt of Laura in the rainforest, of the Yano Indians crowding around her, of blood and mud dripping off her tortured body as the lights rose and fell. Then she awakened, groaning softly, still shivering with terror, and looked up from Alex's lap to see the priest, Father Benedict, staring down at her with eyes ruined by grief and intolerable guilt, illuminated in all of their haunting torment by the pearly dawn light. He was shivering, but he reached down and touched her, lightly stroking her cheek.
'Oh, my child, it's all my fault. *My fault!*'
'Then confess,' Avril said.

Chapter Seventeen

'Confess?' Father Benedict said. 'To what? I can scarcely trust my own memory. But what's happening here – yes, all of it: these terrible hauntings – these things are the bitter fruits of my sins, of my lust and deceit. It's *me* they're after. I'm absolutely sure of that. I've flirted with the devil in many ways and now he's come for my mortal soul. It was Laura and I, our forbidden love, that led to these dreadful events.'

He glanced along the deck, which was quiet in the dawn light (the few remaining passengers either sleeping off the night's horrors or huddling together for comfort while glancing nervously about them) and then, with an almost imperceptible sigh, turned back to Avril, his gaze alighting briefly upon her before passing on to Alex, at whom he stared directly, steadily, his face luminous with pain.

'I was Laura's lover,' he confessed. 'Yes, Alex, this is true. I first made love to her the night before she moved into your father's house. From that night on we became secret lovers, meeting whenever and wherever we could… Please, Alex, don't turn away! Can't you imagine how I felt? A celibate all my life, but suddenly fulfilled in love and desire, naturally I was inflamed, completely mesmerised by her, and could barely let her out of my sight, let alone out of the mission camp. Small wonder, then, that I soon ignored my own doubts and gradually started falling to pieces because of what I was doing. For indeed, whether sane or insane, an innocent fool or a hypocritical calculator,

Laura, in giving herself to me, destroyed my every foundation and laid waste to my faith. And if, in dealing with you, I was no longer sure of my own motives, now, with Laura about to move into your father's house, I was even less sure of my reasoning and didn't dare think about it. No, I didn't want her to live there, not near you and your father, and when she did, my already possessive love became completely insatiable.'

Avril looked across the river, squinting into the brightening sunlight, trying momentarily to distract herself from the pain in the priests voice. Here the river was nearly two miles wide and was growing wider every minute, the forest becoming a shrinking green line that curved away, both east and west, to where the sky met the jungle. A flock of herons flew beneath some gathering clouds: black spots merging with grey haze.

'Oh, God,' she heard the priest saying. 'The sordid deceit of it all! Always meeting her in secret, praying we wouldn't be seen; and after it, the rancid taste of my hypocrisy and self-wounding shame. How ironic, then, that when she was staying in the mission, when we were seeing each other every day, we hadn't been engaged in such an affair – not, at least, until the night before she left – but that once she moved into the plantation, a mere thirty miles from the mission, we were obsessed with seeing one another to continue our profane, forbidden love; and could only see one another openly either when she visited the mission or when I, in my hypocritical role as priest and moral guardian, visited the plantation to attend to the workers or, ostentatiously, confront your father over his own, much more blatant, immorality.' He leaned towards Alex, trying to will his attention. 'Oh, yes, Alex, I know: you think I was just using you; but such simply wasn't the case since, before meeting Laura, and even during that tormenting affair, my paternal concern for you never wavered and only caused me more pain… Did I casually betray you? Most certainly not! Rather, I was sick to the very depths of my soul and constantly questioning my own motives for all of my actions.'

He sat back on the bench, took a deep breath, and then, rubbing his cheeks in a distracted manner, again stared steadily at Alex.

'My dilemma was acute,' he said, 'and perhaps a form of natural justice. If

I'd initially advised you against falling in love with Laura because I was genuinely concerned that you'd be hurt – and certainly that was the case – now, as Laura's secret lover, I couldn't give the same advice without suspecting that self-interest had become entangled in my formerly honest concern. Likewise, if I'd previously fought with your father over his brutal treatment of his Indian workers, not then knowing that your father also had designs on Laura, I couldn't avoid the suspicion that what had once been genuine outrage on my part was now merely a cover for my resentment over the fact that he had her under his own roof and clearly wished to seduce her. So there I was, trapped between two mirrors, each showing a different face.'

Avril watched the river widening, the wall of forest visibly shrinking, the sky becoming an enormous inverted bowl that encased that great body of water. She studied it out of embarrassment, not wanting to see the priest's moist eyes, nor the anger and revulsion on Alex's face as he opened and closed his restless hands.

'And yet it continued – that soul-destroying affair
– and if I lived with shame and guilt, I was also living with the fear that Laura, with her obsessive interest in the forces of darkness, was indeed possessed and, being the instrument of the devil, had been sent to corrupt me. And added to that – a purely religious concern – was the more earthly fear that my relationship with Laura would sooner or later be discovered by someone and made known to your father, or, much worse, to you, which I felt would damage you in a way that could never be undone. That concern, if you can believe me, was relentless – and was a concern shared by Laura.'

Glancing at Alex, Avril saw his delicate profile, his blond hair flopping over one eye, his head framed by the leaden sky. He was trying to keep his face blank, to suppress his conflicting emotions, but the straight line of his lips indicated that he was having some trouble.

'Laura cared for you, Alex. Not in the way you wanted, but she cared for you deeply and suffered because, increasingly aware of your passion for her, the guilt over the affair she was having with me became close to unbearable… Did you think she found your father attractive? No, Alex, she did not. She

flirted with him to keep him from guessing about her relationship with me and, also, to keep him from thinking too much about your embarrassingly obvious infatuation with her – an infatuation that your father found either amusing or threatening, depending on how much he had to drink or how nice Laura was to him… Yes, Alex, she cared for you and made a point of protecting you, while you, in the blindness of your passion, could see only the opposite.'

Now it was Alex who leaned forward, the anger draining from his face, leaving him pale but less grim, his brow furrowed in thought.

'Yes, Alex,' the priest said, 'you saw the opposite to what was really happening. You thought that Laura was having an affair with your father when in fact she was having an affair with me; you thought she didn't give a damn about you, when in fact she was trying to protect you.'

Father Benedict took a deep breath, releasing it in a lingering sigh.
'Why did you almost have a breakdown, Alex? Because you saw your father in her room. Because shortly after she slapped your face – when you accused her of behaving like a whore – you saw your father in her bedroom, placing his hand on her breast, while she, just before you turned away from the window and fled, placed her hand on his hand and, as you so vividly remembered later, chuckled while doing so… So, Alex, you saw that and naturally assumed the worst, and then, with your worst fears confirmed, you almost lost your mind.'
Alex blushed and lowered his head, obviously ashamed of that recollection, while Father Benedict, speaking softly and nervously, revealed the truth to him.
'But you were wrong,' the priest said. 'You saw what you wanted to see. Laura hadn't invited your father to her bedroom that night; he simply turned up, very drunk, saying that he knew of your infatuation with her, that he was going to send you back to school in Manaus the very next day, and that if she didn't join him in bed that same night he would throw her off the plantation. Laura just laughed at him, saying she didn't give a damn, that she'd already arranged to move into Manaus and from there organise a trip into the rainforest in the hope of finding the Yano. Her response merely inflamed

your father, making him want her all the more, but he was really very drunk, almost too drunk to stand, and so, when he pathetically put his hand on her breast, she just chuckled, then laughed at him, humiliating him all the more, and then simply took hold of his hand and, as you turned away from the window to flee the scene, removed it and pushed your father from the room. That's all that happened between them.'

Avril heard a man shouting, a bell ringing from across the water, looked out at the river and saw that the land was closer, houses on stilts, rising up to the edge of the rainforest, the stretch of river in front of them filled with fishing boats and *canoas*, with the floating filling stations known as *pontoes*, and even a large floating factory which, she assumed, was one of the refrigerating plants that Antonio had told her about. It was almost like civilisation and she wanted to see more, but the priest's voice, hoarse with whiskey and shame, forced her attention back to him.

'That was it, Alex. Laura wasn't involved with your father. That belief, I know, had been tormenting you. Now I'm setting you free.'

Alex stared at the priest, started to speak and then went dumb, shuddered and sighed forlornly and buried his face in his hands. His body shook uncontrollably, letting the anguish pour out of him, while Father Benedict reached down to him, touched his head with a trembling hand, and let his fingers linger there, expressing his sorrow.

'She truly loved you, Alex, as I, too, truly love you, and so, a few weeks later, when you'd gone off to school in Manaus, both of us, shocked at the extent of your despair, vowed to terminate our affair and go our separate ways. Yet Laura knew that I couldn't do it, couldn't ignore her while she was near me, as she also knew that she had to follow her own course to wherever it took her. "You won't be able to keep your word," she told me. "Only I can set you free. And in doing that, I'll also set myself free from whatever's haunting me." And then, that same night, your father and Rollie Thatcher were slaughtered – and Laura, Mengrire and the Indian girl, his sweetheart, all disappeared.'

He removed his hand from Alex's head, sighed sadly and sat back, wiped his lips with the cuff of his shirt sleeve as Alex slowly sat upright. They stared at one another for a long time, neither saying a word, while the clouds behind them shifted, letting sunlight break through, its silvery rays beaming down onto the early morning's greyness and falling over the deck of the boat. The

river here was busy, filled with *canoas* and other craft, the sloping bank, now close, littered with houses on stilts over which, in green equatorial splendour, the rainforest began. The priest surveyed all of it, recognising it with trepidation, then he returned his attention to Alex and spoke softly to him.
'And why did she do it, Alex? Why did she disappear that night? I believe she did it on impulse, hardly knowing what she was doing, perhaps shocked because she entered that room after the killing was done; then, in a dazed condition, finding Mengrire and his girl there, and learning that they were going to flee into the rainforest, instinctively fled with them. Impulsively or instinctively, yes… but there were definite reasons.'
Father Benedict straightened his spine and then stared at each of them in turn, speaking firmly and clearly.
'She did it to free me,' he said. 'She did it to save my soul. To remove her seductive presence from my sight and save me from further sin. And she did it, of course, because she was still convinced that she had to face the forces of darkness, those forces known to the Yano, in order to regain her own soul and put Satan behind her.'
When Alex raised his head, pain whipped through Avril's heart: a pain mixed with the rage that sprang from her conviction that his feelings for her were merely a substitute for the love he had cherished and lost. Her hurt and anger fused together, setting her wounded heart to the flames, but she leaned towards the priest, feeling cold and self-destructive, determined to have it all out no matter what it might cost her – or, perhaps more relevant, what it might cost Alex who, sitting in front of her with his head in his hands, was trying to choke back the tears that he knew would enrage her.
'And that's when your downfall started?' she asked of the priest, deliberately keeping her voice soft and calm.
'Dear God, yes,' he replied. 'My world ended that terrible night. When Laura disappeared, my soul went with her – and was lost in that jungle.'
Avril felt her own world ending, crashing into the dust of betrayal, and refused, even though her heart was breaking, to acknowledge Alex's tears.
The boat shuddered and rocked and made a hollow drumming sound, followed by the sounds of squeaking rubber, then music and cheering. Looking over the railing, she saw an enormous floating dock, a mass of people along the jetty where the hull was crushing the rubber tyres, the dock's ramps leading away to a rising, bustling town that was encircled, as

far as the eye could see, by the equatorial rainforest.
They had arrived at Manaus.

Otherworld

W. A. Harbinson

Deep in the heart of the Amazon rainforest live the Yano Indians. A fierce, elusive tribe, they are
dedicated to the powers of darkness, their presence only revealed only by the hypnotic beating of drums… and by mysterious lights in the sky.

Laura Wellman , an American photojournalist, beautiful, sensual and deeply tormented… Believing herself to be possessed by evil spirits, she decides to

offer herself to the dreaded Yano in a final, desperate attempt to release her soul from torment.

Father Paul Benedict , a middle-aged Anglican priest who is starting to doubt his God and the meaning of life in general… Gradually becoming obsessed with Laura, he believes that in somehow saving her from

self-destruction he can find his own redemption.

Alex Poulson , adolescent son of a depraved rubber baron, an almost spiritual innocent born and raised in
Amazonia… Falling helplessly in love with Laura, despite being rejected by her, he follows her into the dangerous depths of the rainforest and is, in turn, followed by the concerned Father Benedict.

There, beyond the reach of civilization, even beyond the light of reason, all three are drawn into the Yano's alien 'Otherworld', where good collides with evil in a

titanic, earth-shattering confrontation…

Otherworld

Luminous with love and possibility, pulsing with eroticism, murder and dread. A powerful, haunting novel about the eternal conflict between primal, mysterious forces on the other side of existence.

By the internationally bestselling author of *Genesis* and *Revelation*.

Book Four
The Rainforest

Chapter One

If Father Benedict's revelations had left Alex in a daze, disturbing him and exalting him, offering shock and relief at once, being back in Manaus, in its haphazard, cluttered streets, merely agitated him all the more and resurrected, with an overpowering vividness, every incident that had led to his premature departure. He felt split in two, the older Alex observing the younger, as if, looking back on what had happened just over a year ago, he was actually looking back a few decades to some unreal, remote period. And yet, given the feeling that time had stretched a lot farther than possible, he also kept expecting to see some familiar faces, though he wasn't at all sure whose faces he was thinking about, apart from those of old schoolfriends. Yes, he had practically just finished his schooling and this knowledge, reverberating in his head, again made him feel immature.

'It seems much smaller than I'd remembered it,' he said to Avril. 'As if I'd left as a child.'
'You *were* a child,' Avril responded tartly, 'and in many ways still are.'
He winced at that and felt a blush on his cheeks, glanced out of the hotel window at the tree-lined Avenido Eduardo Ribeiro, wondering if Laura and Father Benedict had ever stayed in the same hotel; and then, filled with shame, despising himself for his senseless jealousy, he turned away from the window, suddenly aware of Avril's anger and understanding the cause of it.
'Just what do you mean by that?' he asked, hoping it wasn't what he suspected. 'Obviously it wasn't meant as a compliment, so let's clear the air quickly.'
'Don't act naive,' she replied. 'You know damn well what I mean. You've been wounded to the quick ever since learning that Father Benedict was Laura Wellman's lover. You just can't stand the thought of it.'
'It hurt. Naturally. You know what I felt for her. I don't feel that way any longer, but Father Benedict betrayed me.'

‘Rubbish!’ she snapped. ‘You just can’t stand the thought that he had her. You can’t bear to hear the priest mentioning Laura Wellman’s name – and the thought that she actually loved someone else is simply too much for you. God,’ she continued vehemently, ‘what a damned fool I’ve been! You didn’t come back here to set yourself free from your nightmares: you came back in the hope of finding that bitch again – alive and in one piece.’

‘That isn’t true, Avril.’

‘Damn you!’

She had been taking her old clothes off, throwing them angrily on the bed, and now she turned away from him, her naked buttocks quivering, and crossed the bare boards of the floor to disappear into the equally spartan shower room. He looked out the window again, flushed, his heart pounding, listening to the running shower, and unable to shake off the guilt that her accusation had stirred.

Was there some truth in what she’d said? Did he still desire Laura? Had he merely used Avril as an emotional crutch when he most desperately needed one? Now, he wasn’t sure, loving Avril, obsessed with Laura; on the one hand greatly relieved that Laura had not succumbed to his father, on the other still bitter that his good friend, Father Benedict, had turned out to be Laura’s lover all along. He was still reeling from that revelation, not too sure of his own emotions, and now, faced with Avril’s accusation, he had no honest answer.

‘Christ,’ he said, talking to the window, ‘why did I bring her here?’

The road below was busy, cutting through the commercial area. Between some of the tall buildings, surrounding the shacks on the hills beyond, he could see odd patches of dense, tangled forest and scudding grey clouds. It was hot, but he shivered, the fear returning to settle upon him, an almost palpable fear that put a fog around his thoughts and made his nerves feel on edge.

They would soon be seeing the Indian girl, might soon learn what had happened to Laura, and that, which he desired but was also frightened of knowing, was only a prelude to their hike into the rainforest in search of the Yano. When he considered that forthcoming venture, and remembered what had already occurred during the voyage from Belem – the mysterious light, the hauntings, the inexplicable phenomena – his felt his heart fluttering with panic, his skin crawling with dread.

Avril returned from the shower room, clearly still angry, holding a damp towel around her body and walking to the bed. She let the towel drop to the floor and stood in front of him, defiantly naked, the fierce light in her eyes refusing to let him take too much pleasure from the sight of her.
'Well?' she snapped.
'What?'
'Did I tell the truth or didn't I?'
'I love you,' he replied, his heart breaking as he said it. 'I never knew what love was until I met you, but now I do – *yes, I do!*' His heart was racing and he was flushed, his skin sticky with sweat, yet he knew through his fear and confusion that he was speaking the truth. 'Damn you,' he said without malice, in desperation, 'I just want to put all this behind me and then go back to England. *I want to live without doubt!*'
She stepped forward to embrace him, pressing her naked body tightly to him, writhing against him, her fingers digging into his back as if trying to draw blood.
'God!' she said. 'I'm just a bitch! I can't keep my bloody mouth shut. I've let Laura Wellman come between us and can't forget that she's there.'
Alex held her in one arm, stroking her hair with his free hand, pressing his lips to the top of her head as desire made him tremble.
'It's that amulet,' he said. 'You shouldn't still be wearing it. I don't understand why you insist on keeping it when you know what it's doing.'
'I won't let it go, Alex.'
'I know that, but why not?'
'I won't give it up unless *you* take it and promise to keep it.'
'Why me?'
'Because all the bad things that happened to you only happened after you gave the amulet away – and because Peruche must have had a specific reason for giving it to you in the first place. I think that if the amulet has *positive* powers, they'll only work through you, and that sooner or later, whatever your personal feelings, you'll have to take it back.'
'No, Avril, I won't. I want nothing more to do with it. I surrendered my occult powers when I left Brazil and I don't want them back. I'm leaving all that behind me. Those powers only do good for those with faith and I no longer have that.'
'Then I'll keep the amulet until you get your faith back.'

‘That might never happen.’
‘We’ll see, Alex. We’ll see…’ Slipping out of his embrace, she offered a tentative smile, brushed her dark hair from her forehead with one hand and then said, ‘Father Benedict and Antonio are probably downstairs already, so I’d better put my clothes on and get you down there.’
She dressed quickly and attractively, wearing a simple white blouse and skirt, letting a long scarf hang down from her throat, covering the amulet, her feet in sensible flat shoes. Then they went downstairs together, Alex holding Avril’s hand, a pulse beating nervously in his stomach when he thought of the Indian girl.
Father Benedict and Antonio were indeed in the spacious lobby which was, like so many of the buildings in Manaus, as baroque as the famous Opera House, with the same seedy elegance. Antonio looked refreshed, having had a shower and changed his clothes, but Father Benedict, still wearing the same increasingly bedraggled shirt and slacks, had the appearance of a man who hadn’t slept for three or four days. There were three glasses on the table in front of him, one still filled with beer.
‘Lady’s prerogative or not,’ Avril said, ‘I hope I didn’t keep you waiting too long.’
‘Not at all,’ Antonio replied. ‘I’ve just come down. Besides which, we don’t have an actual appointment with the girl and can take our own good time.’
‘We shouldn’t be going at all,’ Father Benedict said. ‘Why dig up old bones?’ The remark was unintentionally brutal and he instantly looked embarrassed, then, having a sip of his beer, wiped his lips with the back of his hand. ‘I’m sorry,’ he said. ‘I didn’t mean to put it that way. But I beg you, Alex, to forget this obsessive mission, forget Laura and the past, forget that poor Indian girl and any distorted memories she may have, and let us all take a plane back to Rio and relative safety.’
‘No,’ Alex said, ‘I won’t forget anything. You know damned well I won’t. That Indian girl could tell us what happened to Laura, which, I’d assumed, was something even you’d want to know.’
‘No, I don’t. I think the past should stay buried. Learning the doubtless unpleasant details of Laura’s fate can do nothing but make us suffer all the more – and getting the story out of that demented Indian girl could possibly damage her further. No, let’s leave well alone and get out while we can.’
Alex stared steadily at Father Benedict for a considerable time, trying to work

out what was bothering him about seeing the Indian girl. Of course it would be painful, for himself as well as for the priest, but as he studied his old friend, again shocked by how much he had aged, he had the feeling that the confessions offered so far were, if accurate in their essence, still incomplete. Father Benedict was a frightened man, much more frightened than he should be, and neither the manifestations on the boat nor the reported powers of the Yano were enough to explain his reluctance to learn more about Laura.
'What good will it do you to return to Rio?' Alex asked, feeling a lot less cruel than he sounded, but needing to get it out. 'You're drinking yourself to death because of what happened a year ago, so don't tell me that learning the truth doesn't matter. It matters a lot to the both of us.'
'Speak for yourself, Alex. I don't wish to know more. I don't wish to dabble in things that we can't understand.'
'You *were* dabbling in such things,' Antonio quickly reminded the priest, 'so your present attitude, to put it mildly, seems rather odd.'
'Is there something you know that we don't?' Alex asked. 'If not, then why this fear, after all we've already been through, of discovering what actually happened to Laura when she fled the plantation?'
'All right,' the priest said, hurriedly finishing off his beer. 'Forget it! Let's go!'
He stood up too quickly, clearly agitated, and led them all out of the hotel, into the busy main street, turning left and heading downhill to Cathedral Square. Antonio hurried to catch up with him, obviously wanting to calm him down, while Alex took Avril's hand in his and pulled her close to him. He appreciated having her near, taking comfort from her dark beauty, needing the comfort as the city pressed in upon him with the weight of old memories. All the streets sloped gently down over a series of *igarapés*, the roads becoming bridges that spanned the steep drops above the plank shacks and stilted houses in the creeks filled with water from the Rio Negro. The whole town was remarkably shabby, with broken pavements, flooded drains, an unsightly conglomeration of open-front stores, cheap restaurants, rough bars and derelict buildings that had once been elegant homes but now were as empty as plundered tombs. Seeing it all again, recalling how he had gone to school here, Alex couldn't help thinking of his father and the world that had shaped him.
'If you want to understand my father,' he said to Avril, 'you should study the

history of this city, because my father was formed by this city and, just like the city, prematurely faded away when the rubber boom ended.'
'Tell me about it right now,' Avril responded, 'since I'm actually walking the streets and might never come back here again.'
'It's a riches-to-rags story,' Alex said. 'By the end of the nineteenth century, Amazonia had the largest known reserves of rubber in the world and rapidly became the richest region in Brazil. The two major cities, Manaus and Belem in that order, were transformed as the rubber barons, all millionaires, including my grandfather, spent their fortunes on lavish mansions, hospitals, libraries, theatres like the *Teatro Amazonia*, and all the ornate monuments and public squares of the kind we've been passing. The millionaires of that rubber boom were essentially unsophisticated men who, with their extraordinary, seemingly limitless, overnight wealth, became increasingly profligate and, determined to mark their own existence in some suitably flamboyant manner, built much of this city at their own expense and without considering the cost. The Opera House was built with marble imported specially from Italy, and the Custom House with stones brought here all the way from Scotland. Likewise, food, wine, champagne, clothing and furniture were all imported from Europe, electricity and telephones, which existed nowhere else in Brazil, were here taken for granted; and indeed, so demented did the millionaires become in their need to prove just how wealthy they were, they even sent their laundry to Europe to be washed. Naturally, in both the Amazonian cities, but particularly here in Manaus, the sexual licentiousness was outrageous and the exploitation of the Indians and other lowly workers commonplace. So, as part of this singular world, a son of one of those millionaires, my father was very much a creature of his environment: spoilt, self-centred, sexually insatiable and, of course, contemptuous of the Indians and his own *seringueiros*. In short, my father was made degenerate by a decadent way of life, and when that way of life died out, leaving him stranded, he exacted his revenge in even worse cruelty.'
'You mean after the rubber boom ended in 1929?'
'Precisely. I was about three years old at the time, my mother had died, and then, after what became known as the Great Crash, Manaus and the plantations around it started sinking back into impoverished neglect. This made my father even more bitter and – if I may say so without sounding self-pitying – made him a rotten father who, when not ignoring me completely,

was either raging at me or being sarcastic just to amuse himself. That's why I grew close to Peruche and, later, looked upon Father Benedict as a surrogate parent.'
'And now you appear to have lost both of them.'
'Yes,' Alex said.
'Does it disturb you being back here?'
'Right now it *all* disturbs me: seeing these streets again, recalling my childhood, my father, old Peruche, even the Indian, Mengrire – and, of course, the hauntings on the boat bringing us here and what's been happening to you and me as Laura, whether imagined or not, more and more stands between us. Yes, it disturbs me. Yet in a strange way, I feel better, as if, even during our fearful, sleepless nights, I have the feeling that we're doing the right thing and will soon resolve everything.'
'We'd *better* resolve everything,' Avril said. 'We won't have a second chance.'
They had reached the bustling square by the Cathedral and Custom House, with the great floating docks at the far side beyond the colourful market. Alex wanted to walk around, to show Avril some of the sights, but Father Benedict had already hailed a taxi and was opening the rear door. Antonio got in first, then Alex and Avril, and eventually, when Father Benedict had taken the seat beside the driver, the taxi moved off past the rows of market stalls and headed away from the centre of the city.
'It's only a five-minute drive,' Father Benedict said tartly, 'so I hope you can all manage to wait that long before torturing the unfortunate Indian girl with your impertinent questions.'
Reminded by that remark of just how angry the priest was, Alex glanced at Antonio, seated at his other side, and received a slight, knowing grin. As the taxi was crossing the Educandos Bridge, he looked down at the *igarapé*, seeing the houses on stilts rising above one another on the opposing slopes than ran down to the creek that flowed back to the river. The Indian girl was somewhere down there, living in one of the fishermen's houses, and Alex, thinking of what she could reveal, felt a chill go through him.
In fact, it was extremely hot, much more so in the taxi, the late morning grey and humid, the heat held in by low black clouds, no breeze to cool the sweat on their skin as the temperature soared.
Father Benedict coughed into his clenched fist, his back shaking as he did so,

and Alex, his head now filled with memories, knew what the priest was feeling: increasing anguish mixed with excitement, insatiable curiosity mixed with dread, the resurrection of lost love and its attendant doubts and subsequent grief. Yes, the priest would be suffering, unable to stop the flood of his emotions, and Alex, glancing sideways at a pale, grim-faced Avril, was aware of just how strong and potentially destructive those emotions could be.
After turning right, the taxi headed down towards the river, the slope becoming steeper and the street more narrow as they passed open-front stores offering fruit and fish, warehouses packed with what seemed to be mountains of cardboard boxes, and shabby wooden stands piled high with sacks of flour, rice, *farinha* and various nuts. The taxi stopped halfway down, unable to go farther, the water, filled with oil and rotten fruit and the remains of dead fish, lapping around the stilts of the houses that stood, one row above another, on the slopes of the creek.
While Father Benedict paid the driver, the rest of them scrambled out. Antonio studied the map that Peter Nicholson had drawn for him, then gazed up at the houses towering above him, wondering where to begin. The taxi reversed past them, then made a Uturn and raced back up the narrow street while Antonio studied the map again, scratched his head and then shrugged his shoulders.
'It's somewhere to the left as we stand facing the river,' he said, 'so let's take the path up behind the houses and then, if we get lost, just ask someone.'
The filthy water of the *igarapé* was lapping around the stilts of the houses nearest to them, a tethered canoe bobbing gently up and down, its oar making a hollow drumming sound against the wet hull. Alex looked past the canoe, at the channel of water running back to the river, washing around the stilts of the other houses near the bottom of the wet, grassy slopes. Children were swimming beneath the houses, some fishermen were casting nets from small boats, and the stench of rotten fruit and dead fish could not be ignored.
He took hold of Avril's hand, tugged it playfully and smiled at her, then followed Antonio across the narrow road and up a steep, winding mud track. Father Benedict was right behind him, panting heavily and muttering crossly, but Alex ignored him, squeezing Avril's hand for comfort, glancing at her to see her brown eyes and breeze-blown hair, her face framed by the stilted shacks on the hill at the far side, over which, drifting low in the sky, were the grey-andblack clouds.

The track led them between the stilts, below the dilapidated plank houses, and soon they came to a group of *cafusos*, some fisherman's family, all squatting on the earth around the steps that led up to their house. There were two sullen teenage girls and a grey-haired woman, probably their mother, the children, all naked, scrabbling around them, covered in dirt. Antonio spoke to the grey-haired woman, showing her his crumpled map. She smiled, displaying toothless gums, spat languidly near his feet, then jabbered in illiterate Portuguese, pointing a bony finger up the dirt track. When she had finished talking, which seemed to take a long time, Antonio waved them all forward.

'We're on the right track,' he said. 'It's at the top of this hill. The house is painted green, it's owned by a fisherman, the girl's uncle, and the girl is said to be a bit crazy and rarely comes out. So, be prepared.'

Reaching the top of the hill in a few minutes, they found the house with no trouble, but stood there uneasily, looking down along the creek to where the river, about five miles wide, glittering darkly, divided one side of the rainforest from the other, supported a unique society of floating stores, factories, gasoline stations and fishing boats, eventually disappearing over the horizon where black water met grey clouds. Seeing it, Alex shivered, the immensity of it quietly shaking him, then he turned and looked up at the green-painted, flaking walls of the house that stood high above him on bent, dangerously rotting stilts. Antonio was at the steps, putting the map back into his pocket, and as Alex walked forward, holding Avril by the elbow, he saw Father Benedict uncorking his hip flask and taking another long drink.

'It's all wrong!' he said. '*Wrong!*' He stared at each of them in turn, his eyes red-rimmed and frightened, and then, screwing the cap back onto his hip flask, stepped backwards away from them. 'I'm not going in there,' he said. 'I don't want to see that girl. If you want to talk to her, do so, but don't expect me to join you. I'm going back down the hill and I'll meet you later in the waterfront bar. *I just can't go in there!*'

He turned and rushed away from them, back down the mud track. Alex, frustrated and angry, wanting to drag the priest back, shrugged, shook his head from side to side and, with Avril close behind him, followed Antonio up the steep, ladder-like, wooden steps to the slightly tilting veranda. The veranda was deserted, but Antonio knocked on the door. There was the sound of shuffling from within, the squeaking of a chair being moved, then the door

opened a little and an old man peered out, his face thin from lack of nourishment, the cheekbones high and prominent, his lips being sucked back onto rotten teeth, his eyes rheumy and squinting.
'*Sim?*' he asked, his voice cracked and suspicious, his gaze taking in each of them in turn, his right hand, its brown fingers surprisingly thick, preparing to slam the door shut.
'*Boa tarde,*' Antonio replied, this being just after noon, his smile geared to soothe the old man's suspicions and keep the door open. '*O meu nome e Antonio Bozzano. Pode ajudar-me, por favor*?'
The old man stared at Alex and Avril, sniffed and rubbed his rheumy eyes, then returned his attention to Antonio, considering him thoughtfully.
'*Desculpe,*' he said. '*Nao entendo*.'
Noise could be heard inside the shack, what sounded like a squeaking bed, and as the old man glanced back over his shoulder and then looked again at Antonio, Alex felt the nerves in his stomach tightening, the dread falling over him.
Antonio started talking in Portuguese to the old man, explaining what they had come here for, but Alex, hardly listening, looked sideways at Avril and saw his own fears reflected in her brown eyes and tight lips, in the constant, restless movement of her fingers as they drummed on her thighs. He placed his hand on her shoulder, squeezed it lightly, receiving a trembling smile, then returned his attention to Antonio and the man in the doorway.
They were having a mild argument, the old man trying to deny them entrance, explaining that his niece was very ill and could not talk about what had happened in the rainforest without becoming upset. The argument went on for some time, Antonio pleading, the old men refusing, but eventually, either charmed or defeated by Antonio's rhetoric, the old man shrugged his naked, bony shoulders and, stepping backwards, opened the door wider to let them all enter.

Chapter Two

The fear instantly swamped Alex, making him break out in a sweat, his heartbeat quickening as he stared through the candlelight darkness at the girl on the bed. She was sitting upright against the wall, her black hair falling over her shoulders, a loose dress of what looked like ordinary sack cloth

unable to hide the full breasts of her young but prematurely wasted body.

Alex was shocked, comparing her to the girl he had known a year ago, only her breasts still retaining the fullness that he clearly recalled, while the rest of her, body and face, was now almost emaciated, her eyes too large above sunken cheeks, staring at him in panic. He felt that same panic, perhaps catching it off her, as he wiped sweat from his forehead, felt stifled and glanced around him, noticing that the darkness was caused by the curtains being drawn all the way across the windows, keeping the daylight out.

'She likes to feel that she's locked in,' the old man explained in Portuguese, obviously knowing what was troubling Alex, 'and that the outside world can't get to her. So she stays here all day in the darkness, usually seeing no one.'
'How did she end up here?' Antonio asked him. The old man looked melodramatically offended.

'I'm her uncle; that's why she was brought here.' 'I understand that you're her uncle,' Antonio said
with some impatience, 'but this girl was thought to
have disappeared for good, so who brought her here?' 'A priest.' The old man shrugged. 'The one that
used to run the mission. He brought her to see me one
day – many months after she'd disappeared – and said
that he'd found her wandering in the rainforest and
that I had to look after her. I complained, saying I had
no money, but he left her here anyway. That priest, he
looked like a madman – and has not been back since.' '*Father Benedict!*'
Avril cried out.
Alex could scarcely believe what he was hearing,
the shock making him reel inwardly, but he looked at
Antonio's widening eyes and realised it was true. He
started to say something, wanting to shout, perhaps
scream, but nothing emerged but a kind of gasp, a
choked expulsion of breath. He felt his heart
pounding, the sweat pouring down his face, took out a

handkerchief and wiped his skin dry as he stared, completely dumbfounded, at Antonio. The Brazilian was stepping up to the bed, staring into the girl's eyes, yellow candlelight flickering over the both of them, painting stripes on the shadows.

'Can I talk to her?' Antonio asked.

'*Sim, Senhor* – but she may not be helpful.' The girl stared fearfully at all of them, her dark eyes reflecting the candlelight, while first Antonio, then Alex and Avril, moved closer to the bed, Antonio going down on one knee to talk to her while Alex and Avril just stood there, hardly daring to breathe. The girl gripped the bed sheet, tugged it up to her chin, stared at each of them in turn, her beautiful brown eyes unnaturally bright, then she giggled and looked directly at Antonio, her smile almost flirtatious.

Antonio spoke Portuguese, his voice soothingly gentle, introducing himself, reminding her who Alex was, and then, after introducing Avril, asking if she would mind conversing in English.

'*Sim, Senhor*,' she said. 'Okay.'

Antonio nodded at her, glanced at Alex and Avril, and eventually, after taking a deep breath, told her what he had come here for. The girl's eyes grew bigger, her pupils yellow in the candlelight, like cat's eyes, except for the fear that made them even brighter. She shuddered, huddled deeper into the wall, and tugged the sheet tighter to her.

'No!' she whispered. '*No!* I can't tell you! *I don't want to remember!*'

She sobbed and turned away, hiding her face against the wall, the shadows cast by the candles flickering over her shaking shoulders while the old man, sniffing loudly, scratching his chest with thick fingers, knelt down and put his hand on Antonio's shoulder and spoke quietly to him.

'You have money?' he asked.

Antonio, at first startled, soon grasped the

situation, nodded in assent, withdrew a fistful of *cruzeiros* from his jacket pocket and, his distaste hidden by the flickering shadows, pressed the money into an outstretched hand. The old man stood up, hid the money in a ceramic jar, then dipped his fingers into a bowl, grabbed the girl's head with his free hand, held the fingers of his other hand up to her nose and forced her to sniff at them. The girl relaxed almost instantly, letting out a grateful sigh, her head falling back against the wall as her eyes opened again. This time she looked steadily at Antonio, the drug, *epena*, making her calm.

'Speak to him,' the old man said harshly. 'You must answer his questions.'

'Questions?' The girl smiled at Antonio. 'You want to question me, mister?'

'Yes,' Antonio said, returning her smile. 'I want to ask a few questions – but first I want to ask if you remember me or the young man behind me.'

Her eyes slowly went up to Alex and she smiled flirtatiously at him, then, seeing Avril, abruptly scowled and looked back at Antonio. '*Sim, Senhor*,' she said. 'The two of you I remember. You were the friendly one, the one who ran the plantation, and him, the one behind you, was the son of the pig, the big white chief who killed my father and stole me from Mengrire, shaming my honour.'

Alex closed his eyes, wanting to die on the spot, but Avril's fingers, entwined with his, lent some warmth to his chilled soul. He opened his eyes again and saw Antonio staring at him, concerned, so he nodded, letting him know he could continue, and then watched the girl. She kept gazing around the room, her eyes unfocused, distractedly chewing the bed sheet. 'Why did you run away from the plantation?' Antonio asked her.

‘Because we killed the big white chief.’
‘You mean, you and Mengrire?’
‘Yes.’
‘Anyone else?’
‘No.’
‘Can you tell me what happened that night?’ ‘I feel good. I can tell.’
She sucked the sheet into her mouth, spat it out
and stared at Alex, noticed Avril and abruptly scowled again, then fixed her attention on Antonio, her brown eyes once more going out of focus as she slipped back
to that distant night.
‘It was Mengrire,’ she said. ‘He was avenging my
shame. The big white chief killed my father, then used
me as his whore, and Mengrire, who wanted me as
much as I wanted him, told me that the pig had to die
and that we must then run away. Oh, mister, I was
frightened – when I heard that, I was frightened – but
Mengrire knew better – he had heard the drums of the
Yano – and he told me that he could not live without
me as his woman, that the only way he could have me
was to kill the big white chief and steal me away, that
he had sold his soul to the devil by sniffing *epena* and
invoking the powers of the Yano, that through all this
had finally found the courage to kill his tormentor.’ She closed her eyes, as if visualizing the whole
event, then opened her eyes to look again at Antonio,
this time not smiling.
‘So, that terrible night, after we’d both taken the
epena – in the forest where we saw the forces of
darkness and joined together as one – we returned to
the big house, to that awful room where I’d suffered
so much, and then, following the instructions of a
voice from the Otherworld of the Yano, Mengrire
killed the big white chief with a machete while he sat
in his chair. And the other one, the fat one, oh how he
shrieked and pleaded, but Mengrire, my man, paying

for me with his mortal soul, again raised the machete above his head and brought it down on the squealing pig, after which, while the blood of both men flowed, while their bodies were still twitching, I took the knife he gave me, the knife blessed by the Dark Ones, and cut off what had made the pigs men and filled their mouths with their manhood.'

'Oh, God,' Avril murmured, her voice cutting through Alex's anguish, making him turn his head to see her covering her face with her hands. She was shivering, but there was little he could do because, given what he had just heard, his own pain was slicing through him as if, by some diabolical magic, the machete that had been wielded by Mengrire was being used against him.

'What about the American woman?' Antonio was saying. 'Why did she run away with you?'

'She heard the screaming,' the girl said, 'and came running into the room. All the servants had heard the screaming, too, but were too frightened to enter. Also, they all hated the master and so blocked up their ears.' 'So, the American woman entered the room and then she fled with you. Why did she do that?' 'We didn't wish it, but did not oppose it. We thought the woman was simply crazy. She rushed into that awful room, saw the blood and the mutilated dead, was sick and dropped into a chair and was calmed by Mengrire. Oh, my man, he was so kind. Though covered in blood, he was still thoughtful. He explained what had happened to her, told her about my great suffering, my humiliation, described how my shame would only be erased by his actions, how the Yano had talked to him and guided him and now were telling him to join them in the rainforest. She was very interested in the Yano – hearing Mengrire talk about them helped her calm down – and then, as she looked

around her, when she had groaned and wept some more, she said that what had happened was terrible, that it was part of her curse, that it had all been written in the stars and so she had to come with us. Yes, mister, we thought she was crazy, but we wanted a gift for the Yano, and knowing they would like a red haired woman, we let her come with us.'

The girl glanced up at her uncle who was standing behind Avril, his rheumy eyes peering out of a shrunken face, his tongue sliding on rotten teeth. He was stripped to the waist, his ribs showing through translucent brown skin, and the girl, scarcely recognizing his presence, let her gaze fall on Avril. Alex noticed that gaze, its almost breathless intensity, and he shivered, seeing Avril doing the same, and wondered what was to come.

'What happened when you fled?' Antonio asked softly. 'When you ventured into the rainforest in pursuit of the Yano?'

The girl closed her eyes for a moment, sucked the bed sheet as if it was a baby's dummy, then shuddered and opened her eyes again and stared blindly at her raised knees.

'It was terrible,' she said. 'It was not what we'd expected. We didn't have to find the Yano – they were expecting us – and when we took the boat upriver and then headed north by foot, into the rainforest, they observed us through lights that spun and sang with a noise beyond silence; a noise – even now it makes me tremble – that seemed to shake us to pieces. Yes, noise – or no noise – and lights that were not lights… And then, oh I swear it, by the unmentionable that we renounced, they came – the forces of darkness, or the slaves of those dark forces, those cast out from the Yanoama to become the dreaded Yano – they emerged from the rainforest near Catrimani and took us into

their village.’
She kept staring blindly at her knees, but her whole body seemed to ripple, waves of fear passing through her like sand blown by a light breeze, while the candlelight, a flickering yellow streaked with black, made her flesh look like snakeskin.
‘We were already exhausted,’ she said. ‘The spinning lights, rising and falling, had kept us from sleeping. We were weary and broken by the silence that seemed physical, and so, when the Yano took us into their village, we could not resist anything. And then…It was a horror! Far worse than most nightmares! And even Mengrire, who had worshipped and obeyed them, wasn’t spared from their diabolical rites’
The girl took a deep breath, her eyes widening, the dreadful experience still clearly vivid in her mind, as real now as it had been at the time.
‘The village seemed ordinary – a collection of large *malocas*, cooking pots steaming in the clearing, women weaving while the children played around them near the paddocks of livestock – but the men were like demons, their faces painted, their bodies pitch-black, their arms and legs covered in decorations that signified the evil ones. They laughed a lot but were not good-humoured, sang a lot but seemed to be groaning, and though they constantly sniffed from bowls of *epena*, they received no pleasure from it. Mengrire told them why we had come to them – that he had heard them calling to him – but they only laughed at him and slashed his body with their knives, and then, when he was bleeding and biting his lips to keep from weeping, they tied him to a pole in the ground and made him watch what was happening.’ Alex felt suffocated, the heat of the small room getting to him, his eyes hurting from having to squint

through the flickering candlelit darkness and also, he surmised, from the nausea that filled his stomach when the Indian girl, studying her knees with glassy eyes, continued her story.

'We were stripped naked and beaten – me and the American woman – then tied with thongs and staked out on the ground just in front of Mengrire. There we remained all day, exposed to the scorching heat of the forest clearing, forced to endure many humiliations and taunts, constantly abused and tortured by the barbaric, women-despising Yano, while Mengrire, my man, once so proud, shed his tears right above us, still tied to that pole. The sun moved across the sky, burned straight down on us at noon, passed on and let the afternoon cool us where our skin bled and burned… Yes, they'd done that: poured hot ash on our slashed skin, rubbing pepper into wounds still seeping blood, and urinating upon us. And finally, when evening came, they started pounding their devil drums, endlessly sniffing up *epena*, and I knew then, when I saw their eyes enlarge and become too bright, that they were turning into madmen.'

The girl sighed and stared at Avril, a hint of venom in her gaze, as if, in seeing this white woman's good health and unmarked beauty, she was reminded of all she had lost and could never recover. Then, with an almost imperceptible shudder, she again lowered her eyes to focus on her brown, badly scarred knees. 'The Yano men were demons, worshipping the devil and despising women, thinking women the handmaidens of the Great Unmentionable, creatures who could seduce them from the path of true darkness and render them helpless; so, they enslaved their women, constantly abused and humiliated them, even made human sacrifices of them at certain times of the year. For that reason they were fascinated by the

American woman, by her fair skin and red hair, and so that night, when they were crazed, when they were engaged in their diabolical rites, when they'd dragged both of us into the centre of a circle filled with their crazed brothers, all drumming or chanting or dancing or fornicating, sometimes with one another, other times with animals, never with their women – when they'd dragged us out to there, our bodies bleeding and burning, they cast me aside, their attention drawn to the American woman, and then took turns at possessing her, holding her down while she screamed and sobbed, desecrating her body, that seductive instrument of the Great Unmentionable, as a way of evoking the forces of darkness and force the Good to retreat. Oh, yes, they all had her – so many! so often!

– and she passed in and out of consciousness many times, so *many* times, her sobs and pleas for mercy drowned out by the pounding of the drums and the frightening shrieks of the crazed men.'

There was a sudden creaking sound and Alex turned his head a little to see Avril, her face a mask of horror, sinking into a rickety wooden chair. She held the chair with one hand, the other twitching in her lap, and she seemed to be breathing too harshly in the fraught, all too brief, silence. The old man was still near the window, sucking his cheeks in, licking his rotten teeth, while Antonio, still down on one knee by the bed, gazing up at the Indian girl, looked like a quiltwork of light and shadow, bizarre and unreal.

Alex also took a deep breath and wiped more sweat from his brow, his soul lacerated by what he was hearing, his fear almost choking him.

'So,' the Indian girl continued, 'the Yano men had her – so *many* had her – while the drums pounded and the others shouted and wailed and danced, and Mengrire, my poor Mengrire, still tied to the post, sobbed, his blood congealed where they'd pressed burning torches against him and scarred him with hot stones. And then – oh, it was frightening! – when the last man was finished with the American woman, when she was whimpering in her delirium and quivering like a bow string, and as the drums reached a terrible, almost unbearable, crescendo, the Yano men went really crazy, even worse

than before, chanting and shrieking and jerking as if convulsed, their black bodies gleaming in the flickering light of the numerous fires, their feet kicking up the dust, the smoke swirling around them, as the stars – *yes, the stars!* – miraculously started moving – up and down, to and fro, in great loops and circles – and then changed into spinning lights like the ones that had haunted us, those lights rising and falling – falling as gently as bubbles, falling out of the shifting sky – the sky was tilting and turning around and forming dazzling globes around us – a constant rising and falling of lights, at first above us, then below us – yes, mister, *below* us – a great lake of lights or stars where the ground should have been, like staring *down* at the night sky. Then I looked across at the American woman, at her abused, naked body, and saw her writhing on the ground, her skin slimy with mud and blood, groaning as a strange substance, a kind of cloud, came out of her mouth – maybe a ghost, her spirit, some demon that had possessed her – and then I saw, all around her, in that upside-down night, forming out of the drifting lights and swimming stars and tilting sky, something beautiful, something horrible, something beautiful *and* horrible, a vision that completely overwhelmed me and mercifully made me unconscious… *I saw God and the devil!'*

Avril released a choked sob and then jumped out of her chair, kicking it over onto its side as she fled from the dimly lit, stifling room. Alex watched her departing, too stunned to go after her, then heard the gasping of the Indian girl on the bed as Antonio leaned closer to her. The old man had rushed forward and was also standing by the bed, tugging angrily at Antonio's jacket sleeve and spitting words into his ear. Antonio pushed him away with one hand, shook the Indian girl with the other, and said harshly, 'What happened after that? How did you manage to get back here? *Talk* to me! What happened to the American woman? *You have to tell me what happened!'* But the girl simply shrieked hysterically and jerked away from him, again turning her face to the wall and then praying dementedly. The old man started shouting, his hands waving frantically, and Antonio pushed him away, then stood up, shaking his head from side to side, then turned to Alex, as the girl continued praying, and rushed him out of the house.

'We'll get no more out of her,' Antonio said, 'but at least we've learned *something*: Father Benedict knows more than he's told us up to now. So let's

find him and get the rest of the story before he also goes crazy.'

They saw Avril ahead of them, about halfway down the hill, and hurried to catch up with her, managing to do so near the bottom, hearing her harsh, frightened breathing as Alex reached for her hand. He grabbed it and held on, pulling her close to him, keeping her there as they crossed the narrow track that led down to the filthy creek, and walked on to the waterfront bar that Father Benedict had mentioned. Alex wiped sweat from his brow, was aware of his racing heart, listened to Avril repeat brokenly, 'I saw it! I saw it!' and felt that his sanity was slipping away into a healing delirium.

The tall stilts were on all sides, the shacks towering above them, the water lapping nearby and bringing with it the soaked rubbish that littered the muddy ground around the shops and warehouses, around the fruit-and-fish stalls, around the door of the waterfront bar where they hoped to find Father Benedict.

Alex followed Antonio in, still holding tightly to Avril, but when he squinted into the gloom, at the dusty tables and chairs, he saw no one but the fat, lethargic barman who, when asked by Antonio if he had recently seen a white man, simply raised his hands and shrugged his shoulders in a negative gesture.

'Where *is* he?' Antonio asked.

Chapter Three

The mission camp was small and desolate, made diminutive by the soaring trees, its few wooden buildings, now shuttered and empty, incongruous in the forest's green splendour and weird daylight silence. Father Benedict kept staring at it, his cigarette smoke stinging his eyes, his free hand, as he rubbed the tears away, shaking visibly and shaming him.

What had he done? Why had he come back here? He looked across the clearing, at the empty medical hut, seeing the ghosts of his past there before him, still kicking up dust. Naked children had played there, chasing

frightened ducks and geese, while their parents, most wearing shirts and pants or shabby dresses, had milled around those mildewed wooden steps, waiting for treatment. Now, everything was closed, the mission as silent as a graveyard, while around it the rainforest, ominously quiet and gloomy as usual, let little sunlight penetrate through the trees, no breeze temper the clinging heat.

Father Benedict sniffed a little, inhaled on his cigarette, picked his hip flask off the damp earth and had another long drink. He glanced up at the sky, lugubrious, grey as slate, then turned away from the desolate, depressing mission and looked across the wide, stippled river which, at this particular point, was perfectly empty and calm. The priest drank from his hip flask, trying to deaden the sound of silence, then leaned forward, his posterior hurting from the rusty oil barrel that supported him, and again stared at the forest surrounding the mission, remembering when he had worked here. Worked here… and loved here.

Just thinking of Laura choked him up, making him groan aloud and tremble, lowering his gaze to the muddy earth. The rainforest, spread around him, was resonant with eerie silence, forcing him back into himself where his worst fears were buried.

What had he done? Why had he come here?

Those questions resounded in the forest silence and made his cheeks burn. The discovery of Mengrire's girl had alone been enough, and he had, at the very sight of the green-painted house, felt all of his deceptions come to light before man and God. So, he had run, not even stopping at the waterfront bar, instead fleeing up the narrow street, away from the *igarapé,* and then catching the first taxi that came by and huddling up in its rear seat. He had told the driver to bring him here, scarcely knowing the reasons why, and had spent that singular journey, through time and shrunken distance, haunted only by the thought of what Mengrire's girl back in that stilted shack might be saying at this very moment to his insistent, bewildered friends.

He inhaled on his cigarette, watched the smoke rings drifting in front of him, gazed through one of the rings at the sullen sky beyond and felt the dead weight of his guilt falling upon him like lead. The empty mission filled him with pain, with an almost unbearable, sweeping sadness, making him recall Father Symonds, Mengrire, all the others, in those days before Laura Wellman arrived to turn his world upside down, finally forcing him, through

the abomination of his acts, to flee from the rainforest.
Yes, he had been tempted, and had succumbed in his weakness: *Behold, the man is become as one of us, to know good and evil… Therefore the Lord God sent him forth from the Garden of Eden…* In truth, by fleeing from here, he had been banished from his own spirit, surrendering his soul to the devil. It was the price he had paid for forbidden love, for the release of his long repressed desires, yet now, when he thought about it, when the shame and horror returned in full measure, he knew, with the certainty of the unredeemed, that if Laura were to appear here before him, he would do it all over again.
He covered his face with his hands, wanting to pray but unable to do so, groaned and then had another drink and slowly climbed to his feet. His eyes were wet with tears, but he wasn't really crying; instead, he sniffed and rubbed his nose, the desolation eating at him, then turned his back to the river and crossed the clearing until he reached the small raised hut that had once been the home of Father Symonds and had then, for a brief but traumatic period, been inhabited by Laura.
He stood there for a moment, the toes of his shoes touching the bottom step, then carefully putting the hip flask into the pocket of his jacket, he removed a clasp knife from the other pocket and went up the few steps.
The silence was getting to him and he felt slightly deranged, first glancing nervously back over his shoulder at the eerily silent, deserted clearing, then opening the knife and slipping it under the metal base of the ring that was fixed to the door to secure the padlock. He prised the base loose from the wood, then slid the blade of the knife in farther, bending it upward until the screws snapped free and the padlock fell to the ground; then, closing the knife and slipping it back into his pocket, glancing again back over his shoulder as if expecting to see someone, he entered the small, gloomy room and stood there in silence.
He choked up almost instantly, waves of sentiment washing over him – grief, guilt, memories of brotherly love and respect, of sexual passion and shame – and felt the emotions rippling through him as his eyes grew accustomed to the semi-darkness and the contents of the room materialized before him as if from a ghost world: walls made from forest legs, open shelves along some of them (once crammed with books but now empty), a hammock still stretched between two walls and a pole thrusting up from the floor, a mosquito net

above the hammock and above the crudely constructed single bed; and, in the middle of the room, the same small wooden table where Father Symonds used to write his letters, a couple of matching chairs, plus three or four dust-covered oil lamps, their wicks dry and brown. Father Symonds had lived here, reading and praying, but then, shortly after the mission had been closed, a singular desecration, a blasphemous sin, had perverted the hut's former sanctity. Thus did Father Benedict, in betraying his faith, also betray his old friend.

He stared at the bed, its mattress remaining though the sheets were missing, and slowly, almost dreamily, as if in a trance, stepped up to it, bent down a little, raised the mattress, found what he had been looking for and held them up in his shaky hand.

It was a pair of white panties, lightly laced, perfectly clean, and Father Benedict, recalling that particular night, when Laura had chuckled and given them to him, was shaken by a tide of love, by an violent onrush of desire and loss. Closing his eyes, groaning again, trembling all over, he buried his face in the fine lace, letting his hungry lips moisten it.

He stood thus for some time, his face buried in Laura's panties, feeling her presence in the lace, his desire resurrected and setting his loins on fire, his skin glowing with a slight, tormenting heat while he trembled all over. Yes, he felt her in the panties, smelt her and saw her – the green eyes bright and wild, the red hair whipping like windblown flames, the thin body as smooth and white as marble, opening to him like her painted, panting lips, arching up to be touched by him – and he groaned again, this time too loudly, quivering like a live wire as the need made his blood race.

Nothing could help him – he was possessed completely by her – and with his swollen flesh draining his senses, he threw himself face down on the bed, his lips still pressed to the panties. He touched himself with one hand, felt his pulsating, insistent erection, and then let the spasms whip through him as his tears soaked the white lace.

Eventually, he sank down, his spasms subsiding, to where the waves of shame washed over him, below that to where sleep was the pale tide that languidly lapped over the darkness.

Rolling onto his back, aware of his own dampness beneath him, he saw Laura entering the room and approaching the bed. She lowered her head to stare at him, her flaming hair falling over him, then her lips curved, smiling

enigmatically, as she knelt on the floor. She seemed vaporous, unreal, her skin glowing and translucent. Gently holding his right hand, she raised it to her lips, kissing it, licking it, the ridged knuckles, the tingling palm, sliding her tongue sensuously between his fingers to lick them and suck them.
-I can't help it.
-Forgive me.
She loosened the cuffs of his shirt, unbuttoned the shirt and then his trousers, removing his clothes as if undressing a baby, letting them fall to the floor. He burned with shame and love at once, writhed with guilt and rising lust, felt her lips on his chest, on his stomach, all around him, until, with a sigh, perhaps a sigh of sorrow, she ran her tongue lightly along his legs and took his toes in her mouth. He melted completely at that moment, dissolving down through himself, hearing his own plea for forgiveness ringing sepulchrally through the void as he found himself standing before an arched gateway that appeared to have formed itself from vines and palm leaves.
So he drove out the man…
And so saying, he went through the gateway and went east of the garden where he saw a column of light which, shaped like a great jewelled sword, burst into a pillar of flames. He cried out, protesting his banishment, his shame equalled by his rage, but then the cherubim materialized, winged creatures with human faces, staring upon him from the swirling smoke of the flaming sword and driving him out of the garden. He saw knotted tree trunks, the tangled web of the giant lianas, lush green vegetation and dark forest and trapped, dying insects… and then, abruptly wakening from his sleep, he saw the hut's mesh-wire window.
He lay there, half dazed, still holding Laura's panties, aware that the damp patch on his trousers had already dried and that the dismal afternoon light outside was giving way to night's darkness. His shame was almost too much to bear, hurting his head, making his heart race, and he swung his legs awkwardly off the bed and forced himself to stand up. He felt weak and was shaking and the deepening gloom disturbed him, so after a final glance around the hut, he started towards the front door.
Before reaching it, he froze, suddenly recalling what he had dreamt, and suddenly, as he stood there, visualizing Laura in the same doorway, entering not as she but as *he* had entered that unforgettable night (the night before she left the mission to take up residence in the plantation) to join her in Father

Symonds' bed and to hell with damnation.
Yes, frozen for a moment he almost believed he could actually see her, standing there right in front of him, but eventually, correcting himself, adjusting his clothing, shaking his head in despair, he went on through the doorway, though her ghost, and descended the steps to the clearing.
Every nerve in his body was shrieking, lacerated by his guilt, and as he crossed the clearing, looking over the vast, darkening river, he thought of Alex and Avril, of his benign friend, Antonio, and burned with the knowledge that he had cheated them and was continuing to do so.
Though deeply ashamed, he could do nothing about it, being unable to go the whole way, to tell them the full, shocking story and thus unburden himself. No, he could not do that – the very thought of it chilled him – and as he gazed at the flowing water, watching darkness fall upon it, turning river and sky into a rich, blood-red tapestry enclosed by an endless ribbon of blackening forest, so, as he watched it and heard the breaking of the silence, he understood that he could now run no farther – and decided to kill himself.
The decision came with remarkable ease, encouraging the peace of resignation, and so he shoved the panties into his trouser pocket and walked to the river. He even smiled as he did so, remembering young Alex almost killing himself, recalling his own tirade after the rescue, his self-righteous outrage. Yet now he was planning the same, preparing to give himself to the water, and for the first time in a long time he actually thought about God, believing that He might indeed have His reasons and, as in this particular part of His great plan, was not beyond displaying a certain irony.
Father Benedict reached the river, filled with pain but still smiling, and then, when he stopped, looking down the sloping bank, surprised that the darkness had fallen so quickly and trying to find the best way to the river's edge, he suddenly realized that the silence, which had been broken gradually by the forest's nocturnal chattering, was actually filling up with something more sinister… the distant beating of Yano drums.
The fear swooped down immediately, its vicious claws tearing at him, and he spun around and looked up at the sky, dreading what he would see… lights rising and falling.
The lights were like Catherine wheels, ascending while spinning rapidly, their brilliant outer rings swirling around a darker core, their silvery striations shooting out for miles and turning into great cobwebs. The were numbered in

their hundreds, forming kaleidoscopes in the starry sky, shooting up from the depths of the rainforest, far north, in the interior, and, equally mysterious, exploding out of the sky itself, first as pinpricks of light, then as dazzling fluorescent flares that descended in slow, elegant arcs and disappeared back into the forest.

He watched them, horrified, convinced that his presence had aroused them, and then, as the drumming became even louder, turning into that familiar, boneshaking bedlam, he sensed movement to his left, near the ground, in the tall bulrushes, and looked down to see two crocodilian caimans, jaws open, lumbering awkwardly towards him.

First startled, then terrified, forgetting his plan to kill himself, he turned away and fled across the clearing, towards the hut that had once belonged to Father Symonds. He heard thunder (*Was it thunder?*), then lightning daggered down from the sky and the hut, with a staccato ripping sound, burst into flames.

Father Benedict staggered backward, his head reeling from the blast, feeling a wave of heat pass over him and move on as he ran to the right. He glanced sideways at the burning hut, wondering how it had exploded, saw the flames fill the night like fluttering yellow banners, searingly bright and illuminating the darkness at the edge of the forest. Breathing harshly, he kept running, glanced up to see the lights, lowered his gaze to see the black river under its mantle of stars. Shuddering, he stopped again, felt his clasp knife, took it out, looked up at the door of his own hut and started heading for it. The thunder roared again (*No*, he thought, *that isn't thunder!*) and then the lightning daggered down through the darkness and his hut also exploded, the flames leaping upward and outward in immense loops and coils.

He turned in another direction, deciding to chance the forest road, but then heard the thunderous noise again, saw clashing fingers of lightning, saw all the mission buildings, one after the other, explode into great balls of yellow fire and swirling tendrils of inky smoke.

He stopped running and glanced around him, let his eyes rest on the chapel, saw a pillar of fire take the shape of an upturned sword and then (or so he imagined) unearthly creatures materializing above it: gigantic but human – not *quite* human: with beating wings – and he stepped back, again terrified, flinging his arm across his eyes, hearing his own shaky voice completing the tale that had been started just an hour or so ago, in his bizarre, haunting dream…

‘Therefore the Lord God sent him forth from the garden of Eden, to till the ground from whence he was taken. So he drove out the man; and he placed at the east of the garden of Eden Cherubim, and a flaming sword which turned every way, to keep the way of the tree of life…’
Father Benedict fell down, crying aloud in his anguish, seeing the light of the flames filling the darkness above him, hearing the Yano drums beating, reaching a deafening crescendo before fading rapidly, then falling away into silence and the peace of unconsciousness.

Chapter Four

He opened his eyes some time later, his throat parched, his head ringing, to smell rancid smoke, see the stars in the night sky, and hear another sound, a jeep urgently braking to a halt, at which, trying to swallow, wanting his racing heart to slow down, he managed to prop himself up on his elbows and stare fearfully around him.

Looking behind him, he saw the remains of the mission, the buildings now no more than piles of smouldering ash and drifting smoke; looking the other way, he saw the jeep parked near the exit gateway, the vines and palm leaves forming a natural arch over the forest road, Alex, Avril and Antonio hurrying towards him.

He gasped and fell back, his head striking the ground heavily, and lay there, defeated, thinking of what had just occurred and accepting that it was all part of a pattern that was not yet completed. Nevertheless, he was still frightened, his head reeling, his body shaking, and when Antonio went down on one knee beside him, followed instantly by Alex and Avril, he understood that he had yet to find release from his unworthy existence.

‘So,’ he said, looking up at Antonio, ‘you managed to find me.’
Antonio smiled gently. ‘It wasn’t difficult,’ he said. ‘In fact, Alex was convinced that this was the first place you’d come to.’
‘And the second place being…?’
‘The plantation. Which is where we’re all going next.’ Antonio glanced around at the smouldering huts and drifting smoke of the mission, then

lowered his eyes again, looking thoughtful, and asked, ‘What happened here?’
‘I’m not sure,’ Father Benedict said, relieved to hear his own voice sounding normal again. ‘I heard the Yano drums, saw the lights, became frightened, saw some caimans coming at me and started running. Then bolts of lightning – or what seemed like bolts of lightning – came down and systematically destroyed the mission, setting fire to everything. I think I might also have seen some giant, unearthly figures, but I probably imagined that.’
‘*Unearthly* figures?’
‘Cherubim. God’s angels, no less.’
‘They might have been protecting you,’ Antonio said.
‘Yes. From myself.’
He pressed his elbows to the ground and forced himself to sit upright, looking left and right, then at Alex and Avril. Then, suddenly, with an intensity that was completely unexpected, he was filled with a shame that shook him leaf and bough and again made him cover his face with his hands.
‘You know!’ he exclaimed, rocking to and fro. ‘Mengrire’s girl must have told you the truth. Oh, God, oh my god, please forgive me! *What did she tell you?*’

His sudden hysteria shocked him, slapping him back to self-awareness, and he quickly removed his hands from his face. His gaze fell upon Avril. Her civilized, modest attractiveness soothed him, her brown eyes and auburn hair and pale skin making him feeling strangely moved. He wanted to reach out to her – to touch that world he had left behind years ago
– but instead he simply sighed and looked at Alex, thinking of how much he had changed in one year, of how his innocence had gone from him. Alex, though still handsome, had lost the mysterious beauty that springs only from the most rare kind of virtue but is easily scorched; and, like the trees around this clearing, he had been scorched badly.

‘Are you all right?’ Alex asked him.

‘Yes, Alex, I’m fine. A little bit shaken, but I’ll survive. Did that girl tell you everything?’
‘Not knowing what originally happened, I can’t know if she told us

everything, but she *did* tell us that you were the one who found her and brought her back to Manaus. If that's true – '
'It is.'
' – then why did you hide the fact?'
Father Benedict took a deep breath, looking across the dark river, the chattering of the rainforest in his ears, his eyes filled with streaming stars.
'I didn't want to know,' he said, 'because I knew that once you discovered that fact, you'd want to know how I found her.'
'According to her uncle, you found her wandering in the rainforest weeks after she'd disappeared. Is that true?'
'No, it's not.'
Father Benedict placed his hands on his head, the fingers interlocked on his skull, his palms pressing into his temples as if trying to crush them. He didn't know quite why he was doing it, but it gave him some comfort.
'All right,' Alex said, his voice soft and slightly shaky, 'we know you haven't given us all the facts, that you're holding back the full story, so you might as well tell us now and get it off your chest. You couldn't have found the Indian girl as you described it… So what happened to Laura?'
'She was captured by the Yano.'
'We know that. What happened after that?'
Father Benedict felt hollow, stripped of pride and drained of life. He wanted to lie down and die right here by the river. The rainforest could have him, just as it had taken Laura, and even as that thought crossed his mind, filling him up with her ghostly presence, he wanted to join her in the cold earth and share her great peace.
He looked up at Alex, then at Avril and Antonio, saw the smouldering huts behind them, the trees soaring above them, the stars sweeping over the trees and spreading out across the river with its glinting black surface; he was shriven, torn, wounded beyond all hope of healing, but he knew that he would have to tell them the rest of it before the morning light came.
Accepting this, he took a deep breath and let his words paint the awful truth.
'So,' he said, 'Laura didn't disappear that first time. She fled into the rainforest with Mengrire and his girl, but when she did so, she didn't disappear for all time. She actually returned five days later.'
'No!' Antonio exclaimed. 'She never returned! I was there. She did *not* return!'

Father Benedict waved his hand, a gesture designed to console Antonio, understanding that the Brazilian was frightened that Alex would think he was part of the deception.

'No, Antonio,' he said. 'You only *thought* she'd disappeared… but she actually returned five days later, coming to see me in the mission, and then for reasons that I'll endeavour to explain, I hid her away in the forest.'

He stared at each of them in turn, taking note of their complete bewilderment, before, seeing the pain on Alex's face, continuing his story.

'After the murders, when Laura fled into the rainforest with Mengrire and his girl, they were all captured by the Yano and, as you've doubtless heard, horribly humiliated and tortured, in Laura's case this taking the form of a truly appalling multiple rape that left her almost half crazy. However, the morning after, when Laura had recovered sufficiently to have at least regained her instinct for survival, she found Mengrire's girl weeping over his dead body, him having been stabbed to death by the Yano while still tied to a post. Laura and Mengrire's girl then fled from that nightmarish place by simply walking away from the then heavily drugged and sleeping Yano tribesmen. Laura was led by the Indian girl back through the rainforest, south towards the Amazon River, until they arrived, about five days later, at my mission station. Luckily it was at night when there was no one to see them, so when finally they were in my hut, I learned the whole hideous story. I also noted that Laura was in a state of shock; that she was, in fact, almost demented.'

He closed his eyes for a moment, shutting out the moon and stars, recalling that night of glory and horror when Laura returned: glory because it was a miracle that she had survived and had returned to him; horror because of what she had been through and the state she was in.

Even now, he winced to look back on it, seeing her clearly in his mind's eye. They had knocked on his door after midnight and when he opened it, he was confused, seeing the Indian girl first, her face covered in grime, her eyes gleaming with fear in the starlight as she muttered incoherent words. And then he had heard the scuffling, fingers scratching on the outside wall, and as he took a step forward, about to peer around the door frame, Laura came into view, her large green eyes clearly demented, shining unnaturally out of a face that was covered in blood and mud, this slime also smearing the tattered remnants of her clothing and sticking to what remained of her red hair, which

had, he was horrified to note, almost certainly been hacked off with knives, with other clumps torn out by the root.
Naturally he had taken them in, laying the sobbing Laura down on the bed while the Indian girl, remarkably less traumatized and while wolfing down some food, told him all that had happened in the Yano camp. Later, he managed to calm Laura – after calming himself – and then, as he cleaned her up, shocked and outraged by her condition, she explained, her tongue tripping over the words, that it was all meant to be.
'She was convinced that the mass rape had been diabolical, that it had, instead of saving her, been designed to fill her with the dark spirits of the Yano's Otherworld, thus making her a vessel for evil and, by so doing, fulfilling the prophesy of Aleister Crowley, the Great Beast, when he'd had that brief affair with Laura's mother and, according to that woman, thus committed her daughter to Satan. Anyway, there was that – and the terrible psychological scars from the experience generally. And so, that same night, before the dawn broke, I sneaked them back out of the mission and hid them in a local village where they remained for some time – and where, Alex, she was in fact hiding when you returned from school in Manaus to attend your father's funeral and help Antonio close down the plantation.'
Stunned, Alex simply stared at him, not saying a word.
'After a few weeks, when I saw that Laura was growing restless, I took the Indian girl, whose mental condition had worsened, to stay with her uncle in Educandos, where you found her. But Laura continued to live in that village, determined in the conviction of her madness never to leave it… Yes, Alex, for the whole of that second week, when you were closing down the plantation, Laura was hiding out in that village, no more, I would imagine, than twenty miles from the plantation itself.'
He saw Alex sucking his breath in, closing his eyes, shuddering slightly, and understood with a fine sense of woe just what he was feeling; just as he knew, by the fluttering of his own heart, that what he was about to recount would hurt the boy even more.
'So,' he said, 'you attended to your father's business and then went off to England, but Laura remained right here in the rainforest, in that small, relatively unknown Indian village. She was in a terrible state, refusing to see anyone she had known, and the memory of that whole Yano nightmare refused to leave her mind – particularly those visions of God and the devil

warring over her soul. And then, when she discovered that the mass rape had left her pregnant, she was convinced more than ever that it had all been preordained and that now she was going to give birth to Satan's child. Know this, there was no way of consoling her. The child was all she could think about.'

This time Alex turned away, fixing his gaze on the wide, black river, a slight tremor rippling through him and then leaving him still. He was breathing deeply but evenly, clearly fighting to control himself, and Father Benedict saw Avril looking at him with love and concern.

A fine girl, he thought. *She's just what he needs. She's stable and knows what she wants, which is what Alex wants.*

Not Laura, though. Laura had never really known what it was she was seeking; so when she found the Yano, when she discovered their ghastly reality, she retreated into self-protective insanity and refused to come out of it. Yes, Father Benedict remembered and would not forget how she spent day after day, night after night, in that small thatched hut, smearing her face with mud, attempting to speak the Indians' language, mumbling constantly about Satan and his child and the forces of darkness; and, like a jackal, like a hyena sniffing for blood, spending a lot of time staring up at the moon and rubbing her taut, swelling belly. Father Benedict, recalling it, caught Alex's returning gaze and, feeling as if he had been knifed, lowered his own eyes demurely.

'During her pregnancy,' he said, 'when you, Alex, were back in England, Laura grew increasingly unstable and was kept from a total breakdown only by my devoted attentions, when I determined to do everything in my power to make amends for my sins. Of course, it wasn't that alone, not merely the need for penance; it was also an impulse that sprang from my continuing, still passionate love for her. Nonetheless, I was made to suffer, unable to forget what the Yano had done to her, and suffering even more because in her fear and dementia she could no longer bear being touched, particularly in any manner suggesting intimacy. Yet as I loved her, so, too, did she love me; and in her stumbling, broken way, her eyes unfocused, her words faltering, she often tried explaining to me that her inability to let me touch her was caused not only by her still vivid memories of her abuse at the hands of the Yano, but perhaps more importantly, by the knowledge that she was pregnant and almost certainly carrying Satan's child. Her love for me – as well as her awareness that I was still a man of God – made her fear that she might

somehow contaminate me if she let me have her even once. So during those awful months, when she lived like the lowliest Indian, when she smeared her face with mud and tried to obliterate her former self, retreating into another, even more demented, world filled with demons and ogres and half crazed Yano tribesmen – so, during all that, as I secretly stayed with her and cared for her, I nonetheless couldn't touch her, couldn't satisfy my relentless and undiminished desire, until, in some miraculous manner, perhaps understanding what she had been through and was imagining, if not actually suffering, I found my desire for her turning into something completely different; that since I could no longer possess her physically, while still needing her emotionally, my desire was turning into the pure flame of a selfless, asexual love. It was the transcendental moment of my life to date – to know pure love for another – and I used it to try and protect Laura from her burgeoning madness.'

He stopped talking, glanced around him, saw the moonlit, starlit night, took some comfort from Antonio's steady, supportive gaze, then fixed his own gaze on Alex, letting the truth break the silence.

'Unfortunately, I failed. Laura gave birth to the child – a perfectly normal child of Indian extraction – and thereafter appeared *completely* to lose touch with reality. She simultaneously loved and loathed the child, was devoted to it and feared it, on the one hand in awe of the miracle of its existence, on the other terrified of its possible nature and reason for being. And so, inevitably, because of that and her many other esoteric beliefs, all her hopes were defeated by her deepening revulsion and mortal terror, until – and I still can't say this without a feeling of nausea – she came to accept fully that she'd given birth to Satan's child.'

'This is horrible,' Avril said.

Father Benedict glanced up and caught the full weight of her stare, the large, luminous brown eyes very steady, but filled with muted revulsion. He returned his attention to Alex, noting how physically slight he still was, then leaned forward a little as Alex slowly raised his head and opened his mouth to speak in a tentative manner.

'Go on,' he said. 'It isn't finished yet. I want to hear the whole story.'

Father Benedict told him, fighting to keep his voice steady, but hearing it cracking as he talked on, every word like a separate stab in his vitals, letting blood flow to drain him. As he told it, he relived it, seeing it vividly and

becoming part of it, again squatting in that small, squalid hut through long nights and shimmering days.

If the hut was squalid, so was Laura, her face caked with mud and grease, her red hair, once long and lustrous, now like a piece of ragged carpet, short, uneven, here a bald patch, there nervously knotted, while the fingers that tugged at her hair also tugged restlessly at her dress of sack cloth, hanging loose around her body, that formerly elegant frame now emaciated, her feet blistered from treading on stony ground, her green eyes wild and furtive.

The hut stank of sweat and urine, the baby howled night and day, and Father Benedict, in his act of penance, also demonstrating his love, fed the baby when Laura ignored it, washed it clean, kept its scabs to a minimum, tried to get her to love it. In truth, she *did* love it, often holding it and rocking it, just as often crooning to it, occasionally sweeping it up in her arms and crying for what it might or might not be; but she was also frightened of it, the fear ascending to heights of terror, and gradually, as she rebounded from love to dread, the latter gradually took precedence.

Finally, that awful evening, when Father Benedict found the baby missing, when he looked at Laura's eyes and saw their enormous, glassy insanity, he was forced to step back in disbelief as she told him what she had done.

'She killed it,' Father Benedict said. 'Plunging it into a barrel of water. She was sobbing, in despair, cursing the devil and herself, pushing the child down into the water, her fingers slipping and sliding off it, the baby bobbing up and down and howling and turning over, being forced down and springing up again and being forced down once more. She was never to forget that moment – she would recount the story obsessively – of how the night spun around her, the stars and firelight blending, as the baby howled and rolled and bobbed up and down, Laura's tears dripping into the barrel in which her baby was drowning.'

Father Benedict took a deep breath, held it in, let it out, feeling exactly how he looked, which was like someone at death's door.

'Yes, she killed it, Alex. Oh, dear God, she drowned her own child… And doubtless, in thus trying to destroy the devil, she gave her soul to him.'

The pain was too much to bear and Father Benedict, bursting into tears again, twisted his body away from them as he covered his face with his hands. He kept crying for some time, unable to stop himself, as if whole rivers of tears were pouring out of him to carry the pain away.

Eventually hands fell on his shoulders, feminine hands touching him lightly, and he turned back and pressed his face to Avril's bosom as she held him close to her. She was speaking softly to him, almost crooning, her words like music, patting his shoulders and rocking him gently from side to side as if soothing a child. He felt ashamed, but also comforted, touched by human warmth and sympathy, and eventually, when his tears had all dried up, he whispered his thanks and slipped out of her embrace.

'I'm sorry,' Alex said, 'but I have to ask you. What happened to Laura?'

'That's when she disappeared,' Father Benedict replied. 'After killing the child.'

He glanced up at the sky, at the wheeling stars in the heavens, stunned by life's beauty and cruelty, by its casual indifference. Then, taking another deep breath, he looked back at Alex.

'Murdering her own child was the last straw,' he said, his voice like smoke, drifting through the darkness and coiling languidly around their shared grief. 'She had buried the baby's body somewhere deep in the rainforest, and a few days after that, during a night when the Yano drums were beating, perhaps as a form of penance, possibly suicide, she headed back into the rainforest and was not seen again. I waited – oh, God, how I waited! – but she never returned. This time, she had gone for good.'

He looked at each of them in turn, frightened of what he had done to them, seeing six eyes in the moonlight, three bodies breathing with great tension, and then one face, Alex's face, floating towards him out of a vast, star-filled backdrop.

'When was that?' Alex asked him.

Father Benedict sat up straight, stared at Alex, stared right through him, saw the stars in a sky that went forever through silence and emptiness. Was the cosmos part of God? His mind? His projected vision? Or was it no more than a boundless, eternal Nothing without pity or love? Thinking about it, he shivered, frightened of what they all might be: the human being with his burning hopes and aspirations and valiant dreams, with his love and compassion and hatred and cruelty, the human being no more than a speck of matter in an infinite Otherworld. Is that what it all amounted to? Was his love for Laura no more than that? Was the suffering of Alex no more than a spark in that endless night? He shuddered, denying this, letting the anguish course through him, threatening to break him, but also humanizing him and making

of him a miracle.
‘Last month,’ he said.

Chapter Five

Finally, definitely, Avril knew what the rainforest was really like: not exotic and beautiful, the greenery lush in brilliant sunlight, the flowers blooming in a profusion to dazzle the eyes, but alien and ominous, sunlight rarely penetrating to the forest floor, the constant damp and humidity making everything outsize but preventing the more colourful flowers from growing, the ground marshy and treacherous. By day it was silent, its greenery brooding and sullen, the enormous trunks of the trees, wrapped in the giant lianas, bathed in a strange and forbidding light that seemed to tug at the senses. And the heat – oh, dear God, she had never known such heat – an unrelenting, humid, equatorial furnace that seemed to suck the breath from her lungs and leave her constantly gasping. And that (she could scarcely believe it) was only the day: the night was very different, but no less uninviting, the heat giving way to chilling cold, the humidity giving way to a pervading dampness, the silence giving way to a constant noise that scraped at her nerves: the mass croaking of giant frogs, the hissing of minor rapids, the jagged, cutting shriek of one bird to another, constant rustling, ghostly growlings, the slithering of snakeskin on tree bark and, miraculously, unbelievably, but most frightening of all, the great silence that arched above the forest canopy like an invisible dome. God, how she hated it! And cast her resentful sweat upon it! And was, every minute of every day, both frightened and fascinated by it, letting her thoughts dissolve into it.

Every minute of every day? She had only been in it for two days. It seemed longer than that – more like a century – but they had only started two days ago.

Now looking straight ahead, she saw a machete swinging through gloom, glinting briefly when it passed through the barest hint of sunlight and chopped into the dense, obstructive foliage – branches covered in revolting fungi, palm trunks bristling with sharp spikes, enormous dark-green leaves, various kinds of clinging liana – as the Indian guide hacked a path through it,

his back glistening with sweat. Behind the guide were the Indian porters, four men and three women, all the males short and stocky, their bodies rippling with muscle, the females, young girls, almost as sturdy as the men, all carrying bundles and packing cases on their heads, repeatedly ducking and straightening up again as they passed under low branches. Behind them, in front of Avril, were Alex, Antonio and Father Benedict, all wearing long pants and white shirts, all soaked in sweat.

They had started the hike from the plantation, after inspecting its shuttered buildings, first travelling by canoes about eighty kilometres upriver, then marching north into the rainforest as Laura had done. At first Avril had enjoyed it, thinking of it as a reprieve, the sheer physical effort involved, and the extraordinary strangeness of it all, helping to distract her from the fear that had built up inside her – because of the boat journey, the Indian girl's revelations, her own vivid visions – and, most of all, because of the magical lights she had seen the night Antonio had driven her and Alex to the devastated mission and an almost broken Father Benedict.

She hadn't seen those lights since, at least not in reality, but each time she closed her eyes, either to sleep or to rest, she saw them in the darkness of her mind, their beauty exquisite and frightening. And so the hike into the rainforest had seemed like a blessing, something different and engaging, the sheer physical exertion keeping her from thinking too much and remembering her fears… but that hadn't lasted long.

It had passed as soon as they stepped off the canoes, fading quickly as they marched into the rainforest and were plunged into gloom. Then that first night in the forest, kept awake by the constant noise, then further prevented from sleeping when, closing her eyes, she saw the mysterious lights rising and falling, illuminating her fevered thoughts. Yes, Avril hated this hike, hated the heat, hated the gloom, and, most of all, she hated the fact that the silence of the forest, if anything, made her think even more, think about too many things that would be better forgotten.

'Are you okay?' Alex asked.
'What do *you* think?' she snapped.

She regretted it instantly, seeing the hurt in his

blue eyes, and realizing that she wasn't just tense, but also riddled with guilt. She was feeling guilty because she had accused him of still being in love with Laura Wellman; even more guilty since observing his finely controlled grief in that desolate plantation: all the doors locked, the windows shuttered, the grass overgrown, the former houses of the *seringueiros* rotting beneath the dripping palmettoes, the grey light making it all seem like a ghost town, silent and eerie.

She'd felt haunted in that place, sensing the ghosts of those departed, and when he had shown her his father's house, also locked and shuttered, she had turned away and walked off without a word, unable to tolerate being near it, nor the sight of his suffering. So, she'd been glad to leave there, taking the canoes tied up at the small jetty, and now, in this oppressive rainforest, near the assumed Yano territory, she knew that her resentment of Alex was based on her love for him.

'God,' she gasped. 'Damn it, I'm sorry, Alex. I didn't mean it that way.'
'I understand, Avril.'
She swotted flies from her face, had to spit them from her lips, felt them coming back, attracted by her sweat, to crawl upon her again. She kept swotting them away, cursing softly, her shoulders aching, then adjusted the white felt hat on her head and sucked in the suffocatingly humid air.
Up ahead, Antonio stumbled, falling against Father Benedict, and the priest, with a speed that surprised her, grabbed his elbow and steadied him. When Antonio thanked him, the priest grunted a reply, then they both continued onward, behind the porters, as the machete hacked out a path for them.
There was actually a track here, overgrown and barely visible, which indicated, as Alex had told her with a feverish look, that they might be nearing the Yano. Avril wondered about that, feeling exhausted and nervous, then she twitched and slapped a giant beetle off her shoulder and inched away from the trees, trying to keep to the middle of the track, her booted feet finding soggy earth.
'How much longer?' she managed to gasp. 'I don't think I can take much more of this. Every bone in my body is aching and my lungs are on fire.'

‘Tomorrow,’ Alex replied. ‘Some time tomorrow evening. And it’s going to be dark fairly soon, so you can have a rest then.’

She plunged into despair, into pits of further exhaustion, unable to bear the thought of so much distance still to be covered, nor the thought of another night in this pestilent rainforest, trying in vain to sleep. More flies buzzed frantically around her, she dodged a cloud of mosquitoes, shadows shifted in the undergrowth and she jerked away, imagining snakes and giant spiders, then hurried onward to catch up with Alex, his sweaty back hypnotizing her. The forest light was strange, not just gloomy but weird, constantly changing in some manner she could not define, but which unsettled her greatly. She rubbed sweat from her eyes, blew more flies off her lips, saw the line of men and women with bundles and boxes on their heads, a machete rising and falling, the foliage snapping and springing sideways, whipping back into more foliage and causing green leaves to scatter.

Green – it was all green – a green deepened in dim light. She had to look carefully to see the other forest colours: the shadowed brown of the tree trunks, the whitish brown of the dangling lianas, the yellowish white of the fungi that covered the entangled branches, the dark clusters of Cannon-Ball fruit, the red petals and silvery-white fruit of the heisteria flowers that occasionally lent colour to the gloom near the otherwise featureless forest floor.

Avril hadn’t expected this – she had expected a riot of colours – but now she knew that most of the colours were high up in the forest canopy, up there near the sun with the true wealth of forest wildlife: the insects and monkeys and snakes and extraordinary variety of birds. Yes, the beauty was all up there, breathing the air, warmed by the sun; down here it was the gloom and the damp and the silence, with stinging flies and poisonous spiders and eighteen-inch rodents, with brown moths and sloths and large cats and maneating snakes. Down here, where she stumbled and sweated, was a world to make the flesh creep.

She went into a minor trance, feeling nothing but her aching bones, some part of her slipping away to avoid passing time. She hardly noticed the darkness falling – perhaps the change was too abrupt – but suddenly, with a sigh of relief, she was sinking to the ground.

Father Benedict unscrewed his hip flask, Alex slid to the ground beside her, both of them leaning against a thick tree trunk while Antonio dealt with the

porters. Something crawled onto her hand and she twitched and then relaxed, feeling Alex's fingers slipping between her own as he tugged her to him. Yes, it was almost dark, and the forest was starting to chatter on all sides, so she put her head back against the tree trunk and took deep, even breaths. After a while she felt better, sat up straighter, looked around her, saw the Indians, men and women, hacking the foliage away, making clear spaces and stringing the hammocks up and then lighting a fire. The flames illuminated the darkness, lent a soft glow to the night, and the soup, boiled in the tins, was gratefully consumed and helped to wash down the dry bread.

Avril kept looking around her, scarcely believing where she was, trying to reconcile this place with the world she had come from and feeling, as she gave up in defeat, that she was living a dream.

Suddenly, the forest was noisy, filled with distant growling and shrieking, the rustling and snapping much closer as the undergrowth came to life. Avril shivered, her skin crawling, thinking of giant snakes and venomous spiders, of pacas and kinkajous and stinging termites and poisonous ants, then she drank some of the *caipirinha* that Alex had given her and rested her head on his shoulder.

'I wish it was all over,' she said. 'I don't think I can wait until tomorrow evening. Although we haven't seen anything, I still feel we're being watched; that we've been followed every inch of the way and we're not alone now.'

'We haven't seen anything,' Alex said, 'and we haven't heard the drums, yet I feel exactly the same way at you do: that we're being observed all the time.'

'I sometimes think it's this amulet. Then I think it's just the forest: this strange light that has no warmth in it and constantly changes.'

'The rainforest can certainly do that. Light and shadow come alive. But I don't think that's our problem at the moment. I think we're under surveillance.'

'By the Yano?'

'Yes. If I'm to believe what I've been told, they can see across time and space. And I dread to think of what they might do if they decide to take action.'

'I'm surprised they haven't done it before.'

'So am I,' Alex said.

She was glad to get into her hammock, soothed by its gentle swaying, and then she looked up at the treetops directly above her and immediately felt

dizzy. The trees were black in the black night, black tunnels leading up to the sky, showing small patches of stars as they would be seen through an inverted telescope, placing a strain on her eyes as the sky seemed to spin. She promptly closed her eyes, took a few deep, even breaths, glanced around her at the others, that intimate circle of people in hammocks, and then, managing to close her eyes again, prayed that sleep would come to her.

It came and she slipped through dreams, the shifting darkness brushing her lightly, familiar faces floating out of the void around her to offer comfort. She saw London, the gaunt ruins of war, her parents' house in Regent's Park, her father introducing Alex to the family, Alex's blue eyes caressing her. He was indefinably beautiful, beguilingly distant, almost too gentle to be true, and she went to him, naked, unashamed, and wantonly dragged him on top of her.

Then he melted, disappeared, as the walls of the bedroom became the boat's cabin, a brilliant light swirling fiercely above her and drawing her up to it. She screamed – or tried to scream – then fell into unnatural silence, emerging from a curving tunnel of darkness to the deck of the boat, snakes sliding across her feet, giant spiders dropping out of the sky, flames flickering blue and yellow beneath the enormous, circular light that swirled just above her. Then it changed, shrinking rapidly, becoming the moon, and she followed its silvery striations back down to Earth and the sad remains of the mission: piles of charred, smouldering wood, smoke drifting through starlit darkness, coiling around the bowed head of Father Benedict where he sat on the ground.

She reached out to comfort him, saw Alex, travelled through him, saw the padlocked, shuttered buildings of the deserted plantation, the silence total and eerie.

Laura Wellman was there, her red hair like windblown flames, her green eyes too large, touched with madness, her smile enigmatic. She mesmerised Avril, raising her hands, calling to her, and then Avril groaned aloud, her fear jerking her awake, and found herself tossing and turning in the swaying hammock, back in the rainforest, feeling that something was wrong.

Directly above her was the same pitch-black darkness broken up by tiny glittering patches, the trees forming tunnels up to the stars with the odd cloud, faintly illuminated by pale threads of moonlight, drifting across gaps in the forest canopy and making the sky appear to tilt slowly.

Turning her head, she gazed around the makeshift camp, saw Alex, Antonio and Father Benedict sleeping in their separate hammocks, the Indian porters, men and women, fearlessly sleeping on mats rolled out on the damp earth. She tried to see between the trees, but the darkness was almost total, offering only the haunting sounds of the birds and animals deep in the rainforest: the odd jagged, staccato cry, a distant, hollow growling, the sudden screeching of a large group of angry monkeys, branches breaking and fruit falling to the ground. Near the camp it was different: there were no large animals there; instead there was constant rustling, the snapping of twigs, the sound, whether real or imagined, of slithering and sliding.

Avril shivered, thinking of snakes, of furred sloths and hairy spiders, and was unable to stop scratching herself as she arched her spine in the hammock. Then she heard something different, something louder and closer, so close it made her twitch and sent a chill down through her.

Jerking her head around, hearing the sound from another direction, she saw nothing but the darkness beneath the shivering trees, and then, almost instantly, but from the opposite direction, heard the bizarre sound again. Terror slashed through her, turning her even colder, making her tremble, when she heard the sound again, then again, yet again, now emanating like a ghostly chorus all around her, the sounds – for now there were many – obviously coming from different sources and seeming to call out to one another and then intermingle.

Not an animal sound – a human sound! – imitating some kind of animal… or like a child blowing through a small horn: a sort of hollow, high-pitched, quavering cry that was now rebounding spectrally, with a regular, eerie rhythm, from one side of the cleared area to the other, as if the camp was completely surrounded by creatures who, whether human or inhuman, were calling out repeatedly to one another in that weird, frightening manner.

Panic mesmerized her, letting her move only her head, looking left and right, between her feet, in all directions, to where the strange calls seemed to be coming from at ever increasing intervals.

Human beings? Alien creatures? The sounds were well above the ground – five or six feet off the ground

– so, yes, they were possibly human, though this supposition didn’t help her much. And then – oh, dear God! – she heard and saw movement: some bushes springing apart, something racing around the clearing, someone

running the other way… Yes, human beings, shadowy forms, all suddenly racing to and fro around the dark perimeter of the makeshift camp.
Eyes! (*Could she see eyes?*) She thought she was going mad. The terror made her burn as she stared left and right, again between her own feet, and saw the eyes moving around her, eyes surrounded by luminous rings, the paint looking like phosphorescent circles that flew to and fro as the men (if indeed they were such) surrounded the camp. And then –
Please, God, no! –
– she heard a rushing sound directly behind her and violently jerked her head back, letting it hang down over the end of the hammock.
He was towering above her, a tall, black-skinned barbarian, his body all muscle and bone, his sweat glistening in a beam of moonlight, the luminous circles around his bulging eyes, the rest of his face painted in a wide variety of colours, his head covered in feathers and leaves, his teeth bared in a demoniacal snarl as he raised a machete above his head.
Avril's own screaming slapped her awake, making her jerk upright, glancing wildly about her as bushes parted and sprang back together and the floating, luminous eyes disappeared like lights being switched off.
Everyone else had also woken up – her screaming had done that – and she gripped the edge of her hammock, shaking badly and ill with fear, as Alex rushed up to her, followed by Antonio and Father Benedict, Alex holding her wrists and whispering to her, asking what had happened, while the others stared at her in alarm and, behind them, the Indian porters chattered excitedly to one another. Avril tried to explain, stuttering and shaking as she did so, and eventually managed to get it all out and swing herself off the hammock, determined not to sleep again that night and wanting to feel Alex's arms around her, as they were at that moment.
'It was the Yano!' Father Benedict exclaimed. 'It had to be! *It was them!*'
'Be quiet!' Antonio snapped. 'Don't mention them again. If the porters even suspect it was them, they'll panic and leave. I'm going to tell them you had a bad dream, Avril, so please don't contradict me.'
'He – the one above me – was going to kill me with his machete.'
Avril was shocked to hear the trembling of her own voice, ashamed to hear her own fear.
'No,' Antonio said. 'He only wanted to frighten you. If he'd wanted to kill you, you'd be dead by now. They want to frighten us all.'

He turned to the Indian porter, gesticulating and speaking sharply, lying about Avril's 'dream' and telling them to go back to sleep. At first they were uncertain, then puzzled, then amused, and finally one of them jabbed his finger at Avril and made a grinning remark, at which the others burst into laughter and returned to their mats.

Avril refused to go back to her hammock, so Alex sat beside her on the ground, both leaning against a tree trunk, with a blanket over them to keep out the cold. Avril shook for a long time, but eventually managed to control herself, feeling warmer and more secure in Alex's arms. Antonio had returned to his hammock, but Father Benedict was kneeling beside them, drinking some *caipirinha* from his hip flask and then pursing his lips. He glared through the moonlit darkness at Avril and then shook his head.

'You think tonight was bad?' he said. 'Then just wait until tomorrow. Now that they've found us, as clearly they have, they won't leave us in peace. First they'll try to drive us crazy and then, when we've no resistance left, they'll just come and take us. Tonight was just the beginning.'

Avril huddled up close to Alex, taking comfort in his arms, still frightened and feeling like a child, now dependent upon him. She slipped in and out of sleep, the priest's words refusing to leave her, repeating themselves insidiously in her head as the night slowly passed.

When dawn came, she felt dazed, disconnected from those around her, eating her breakfast with little enthusiasm, but relieved to see daylight. Then everything was packed away, Antonio gave the command to move out, the Indian porters piled the bundles and boxes on their heads, and eventually everyone followed the guide through the undergrowth, away from the clearing.

'Today,' Father Benedict whispered, wiping his cracked, shivering lips, 'is the day we'll all learn to pray. Because today will be hell.'

Chapter Six

He was right. This time they progressed easily, advancing with little delay, the guide sheathing his machete because the forest floor was clear, with the lower layers of the trees quite high above them and the air reasonably cool. But then the heat came, building up beneath the trees, turning the morning dew to steam and the crisp air to stifling humidity, making Avril sweat while

her thoughts reeled towards catatonia.

She held on to her senses by keeping her eyes fixed on the others – Antonio just behind the guide, looking surprisingly cool; Father Benedict looking weary, but managing to walk straight; Alex remaining by her side and trying to combat his natural frailty, making her heart quicken when she saw him, her love pouring out to him. But then, with the heat and her exhaustion, the latter arriving remarkably quickly, came a relentless, frightening feeling of unreality, which left everyone (she assumed) as unprepared as she was for the demented screaming that tore through the forest's silence and stripped her nerves bare.

Avril briefly lost her senses, the fear automatic and blinding. She felt a hand, someone's hand, Alex's hand, on her elbow and was pulled aside (*What's he trying to hide from me?*) as the demented screaming grew in intensity.

Jerking her elbow free, she scanned the gloom, the scattering porters, and gasped, shaking suddenly, her heart beating too quickly, when she saw the female porter, brown-skinned, her long black hair whipping, being crushed in the coils of the giant anaconda that had slithered out of the bulrushes of a nearby várzea lake over which, like solemn monks, the trees were bowed, their trunks beautifully decorated with mosaics of peporamia and reflected in water as still as glass.

It was a scene so beautiful and terrible that it would change her forever, stripping away the remnants of her childish belief in order and leaving her with nothing but the breach that only true love could fill. The horror and the beauty, the lake and the scene beside it: Avril stared dumbly, disbelieving, knowing only what she was seeing: the young Indian woman, her long black hair whipping across her face, one exposed arm waving frantically, her whole body and both legs imprisoned in the giant snake's body, a thirty-foot anaconda, its lower half crushing her, pulsating as it tightened, coiling around her and dragging her gradually breaking bones back down to the lush vegetation of the lovely várzea lake. The girl kept screaming – an inhuman sound – and waved her free arm, but then she choked into silence as the monstrous reptile slid back into the water and took her down with it.

Bedlam reigned as the porters panicked, shouting and frantically gesticulating, dropping to their knees and letting the supplies fall to the ground, clearly getting ready to run but being stopped by Antonio who, with that experience gleaned from years on the plantation, bullied and cajoled them into submission and pushed them onward again.

'What…?' Avril began.
(*Was that her own voice? Not really*.)
'Shut up!' Antonio snapped, 'Don't say anything.

Please God, just keep walking.'
And so she kept walking, trying to control her shaking limbs, avoiding Alex's fraught gaze, watching the priest sip from his hip flask and hearing his constant, obsessive monologues as he talked to himself, only truly aware of her own increasing fear as the heat suffocated her.
Yes, the jungle was a furnace – or, more accurately, an oven – and as they skirted the várzea lake and followed the water to its babbling source, she felt that she was being buried alive in the lush, green vegetation.
The source of the lake was a rock-strewn river, a tributary of the Rio Branco, a curving stretch of black water that briefly divided the dense forest and let the sunlight pour down between the trees in oblique, wavering lines. The morning had almost passed, the sun stood high in the sky, and the sunlight, now so rare, reflecting off the dancing water, dazzled their gloom-expanded pupils and made them half blind. Avril blinked and rubbed her eyes, saw the trees of the far bank, looked again and saw a long line of Indian warriors, blinked again and saw nothing. She shook her head from side to side, recalling the Indian poised over her hammock, assumed she was imagining things and again scanned the far bank and,

as a black figure melted into the forest, heard a grunting sound beside her.

Turning her head, she saw a spear, heard a whimpering become a groan as the wounded porter stumbled backwards, his hands groping at the spear sloping down through his stomach and emerging from one side of his spine, just above the left buttock.

Managing to grab the spear, he screamed, another quavering, inhuman sound, and then he suddenly rushed forward, as if pulling himself by the spear, and seemed to glide through his own blood as it squirted over his fellow porters, and then, as he plunged headfirst into the river, Avril looked away.

At that moment all the other porters, men and women, were galvanized into action, shouting out in terror, dropping their bundles and boxes and fleeing back into the forest. Only the guide remained, bawling angrily at them while waving his machete – but even as he did so, the water behind him started bubbling and then exploded into a frothing mass, the white foam streaked with red and silver as a shoal of piranha fish savagely attacked the man who, speared and bloody, had fallen into the river.

The water boiled in terrible fury, blood and foam splashing over the muddy bank, the piranhas forming a frenzied mass that resembled a giant, heaving lung as their razor-sharp teeth stripped the flesh from the man's bones and his skeleton, first the ribcage and then an arm, was released to float off downstream with a shoal of piranhas still tearing at him and loose bones drifting free.

Avril had to look away, her skin rippling with revulsion, and found herself staring at the far bank, half expecting to see the Yano warriors again. Seeing only the line of trees, the ominous darkness beneath them, she stepped forward when the guide moved

towards the river, automatically following him. Then she heard screaming behind her, a shocking wail of human suffering, and as she looked back over her shoulder, her whole body twitching violently, she realized that it was one of the Indian porters who had fled into the forest. There was another, different scream, then another and yet another, as the porters, men and women, were butchered by the Yano warriors.

Even as Avril started sobbing, as the fear made her feel faint, Alex grabbed her by the hand and practically dragged her to the river, following the guide, Antonio and Father Benedict, all of whom were already knee-deep in the water, their bodies swaying from side to side as they waded against the strong current.

'The fish!' Avril heard herself shouting hysterically. 'Oh, my God, the piranhas!'

'It's all right,' Alex told her. 'The piranhas are drawn to the smell of blood. That whole shoal will be following the bloody corpse of that poor porter as the current carries him downriver. It's safe, Avril. Let's go!'

The water came up to her waist and beat against her with some force, breaking around her in blackly glittering eddies and then flowing on. She held Alex's hand, staring nervously at the far bank, still expecting to see the fearsome Yano warriors emerge from the trees. Mercifully, they did not appear, but she heard another shocking scream behind her, emanating once more from the forest they had left behind, as, she assumed, some of the Yano tortured one of the captured porters.

Another blood-chilling scream made her wince, turning her head as she did so and glancing upstream to where the river, flowing towards her, emerged from a sharp, tree-shrouded bend. Around that bend came

two alligators – at least that's what she thought they were – but even as she cried a warning and wildly pointed at them, the log-like objects floated closer, being carried on the current, and then, to her horror, could be seen as what they really were: two of the butchered Indian porters, a man and a young woman, their skin hanging in strips from gleaming bone, spreading pools of blood forming garish patterns in the water around them.

Avril almost retched but managed to hold it in as Alex tugged at her hand, urging her towards the opposite bank, shouting that they had to get out of the river before the piranhas were attracted to the two dead and bloody Indian porters. The very mention of the dreaded fish instantly energised Avril and as she waded away from the drifting corpses she saw a triangular-shaped silvery mass, another shoal of the flesh-eating piranhas, racing out from the shadows of the bank upstream and heading straight for the bloodsurrounded porters.

Panic propelled her forward, gave her the strength to move faster, and with everyone shouting at her – Father Benedict and Antonio, the Indian guide and Alex – she was soon clambering up the muddy bank and falling, with her breath coming in heavy spasms, into Alex's waiting arms. The river behind her hissed and boiled, became a cauldron of blood and noise, but she only glanced fitfully at it, not wishing to see the horror, and even as the piranhas were stripping clean the bones of the corpses, she found herself heading, with the rest of her much diminished party, into the strangling humidity of the forest that now belonged to the Yano.

Chapter Seven

It was another world, a darker and even more alien place, the heat pressing down as an almost physical presence while the light, grey and shadowed, seemed to shift all around them, expanding and contracting reality in some

indefinable manner. It had been raining and the trees were soaked, the rain turning to steam, and this steam drifted lazily to and fro to make them sweat all the more. The ground underfoot was marshy and alive with numerous insects, including large stinging ants and a remarkable variety of spiders. Avril carefully watched the latter, her flesh crawling like the ground itself, shocked at the size and quantity of the spiders, wondering what they had come from. Also, there were snakes, hissing and slithering through the wet leaves, not attacking but appearing to follow them as they forged on ahead.

'It's the Yano,' Alex said. 'They control the animals and insects and observe us through them. We didn't lose them back at the river; they're watching us right now.'

'Faith,' Father Benedict said, an uncommon firmness in his voice. 'They can't defeat us if we have faith and hold strongly to it.'

Yet faith was hard to come by in this soggy, brooding forest where spiders as large as dinner plates kept crossing the ground in front of them, and snakes, some small, others thirty feet long, slithered through the undergrowth on both sides as if keeping pace with them.

Avril's initial horror eventually turned into acceptance, a protective feeling of unreality, as if what she was seeing was a dream that could not really touch her. Certainly time passed this way, the afternoon fading quickly, the grey light becoming darker every minute as the unseen sun went down. A different fear now attacked her, the draining fear of the unknown, and she inched a little closer to Alex who was walking beside her.

'Are we close?' she asked.

'We've arrived,' he replied. 'Right now, the Yano are all around us.'
And indeed this was true, as they all brutally discovered, when, not five minutes later, as the greyness turned black, the guide hacked through dense foliage and they emerged to another várzea lake and saw, hanging upside-down from a tree on the muddy bank, another of the Indian porters who had fled.
It was a large Cecropia tree, its trunk hollow, filled with fire-ants, and the

Yano had smeared honey on the head of then alive porter and, after cutting a small slit in his belly, applied the same honey to that open wound. The man's death would have been hideous, a catalogue of agonies beyond description, and even now, with thousands of ants swarming over him, the frozen contortions of his body and the anguished lines of his facial muscles were eloquent testimony to the living hell he had been through before death released him.

The Indian guide stepped back, letting his machete fall to the ground, flinging his right arm over his eyes as he let out a quavering groan of horror. Then he turned away and fled, running around the still lake, suddenly stopped and jack-knifed, yelping in terror as he did so, but then straightened up again and staggered sideways with a long lance sticking out of him. The lance was quivering up and down, piercing his stomach at an angle, and as he screamed and tugged at it, his pierced stomach pumping blood, the weight of the weapon pulled him forward, then made him spin and fall down, the lance breaking off as he struck the ground and rolled onto his back.

Though darkness was falling quickly, the Yano warrior was discernible, standing at the far side of the lake and staring directly at them.

Avril studied him in silence, her mind reeling with shock, but then the man on the ground screamed and she found herself running towards him. Alex and Antonio raced after her, calling out her name. The wounded man screamed again, the Yano warrior disappeared, and someone managed to grab Avril, tugged at her, jerked her back, and as she fell to the ground, she heard the man screaming once more in the most awful terror.

Rolling over, though under Alex, who was attempting to hold her down, she peered through the deepening darkness and saw the wounded guide waving frantically, his lower half disappearing down the jaws of an alligator that was dragging him backwards through the bulrushes and into the lake. Avril couldn't look away – she was riveted by that shocking sight – so she just lay there and watched, seeing everything clearly: the darkness taking command, a patch of moonlight on the water, the bulrushes parting as the alligator backed through them, its jaws crushing the Indian guide as he offered a final scream and then was dragged down the muddy bank, into a pitiless silence.

Avril sighed and sat upright, numbed by dread and exhaustion. She let Alex pull her into his embrace and rock her gently from side to side.

'Terrible, terrible,' she heard Father Benedict murmur. 'This isn't like the

normal rainforest… and those Yano tribesmen aren't human.'
'I've lost all sense of direction,' Antonio said, 'and the compass doesn't work anymore. No north or south, no east or west: the needle just spins.'
'The Yano are all around us anyway,' Alex said, 'so we've no choice but to just sit it out.'
No north or south, no east or west… Hearing those words reverberating in her head, Avril understood exactly what they meant. This forest was unearthly, a soggy, humid hell, steaming and dripping and deceiving the eyes, playing tricks with shadow and light, rendering time meaningless. *No north or south, no east or west*: just the gathering darkness, the metamorphosis of sun to moon, the ghostly materialization of the stars in the distance, viewed obliquely through a gap in the forest canopy not too far away. She kept staring at that gap, no longer caring about the Yano, realizing that she had automatically started stroking the amulet and that the ground, warm and yielding beneath her, had started to shake.
Father Benedict's head jerked up. Antonio and Alex stared directly at her. She stared back and then returned her gaze to that patch of sky in the distance. Then she heard the drums, muffled at first but swiftly becoming louder, and as the ground beneath her shook, distinctly, as in an earthquake, she saw a single light rising from the rainforest and then descending, forming a languid, elegant arc that took the shape of an immense question mark.
'There they are,' Alex whispered.
First one light, then another, then three or four more, all ascending from the rainforest, rising as if in slow motion, flaring outward in brilliant yellows and purples and blues, expanding and spinning and looping over to descend again, the ones falling passing those soaring majestically skyward, their dazzling luminescence erasing the stars and painting the night many colours.
'That's it,' Alex said. 'That's where we're going. So let's get to our feet.'
They moved on, leaving the várzea lake behind them, trudging wearily or fearfully (there was no way of telling) through an eerie blue darkness that seemed to glide like smoke, often flowing around mosaics of shadow or tree trunks shaped like gargoyles. The ground was still warm and marshy, muffling the sound of their footsteps, springing beneath them with the resilience of a mattress filled with feathers and eiderdown.
Avril felt that she was walking on air, in the sky, above the clouds, and when she looked around her, through that mysteriously shifting blue darkness, her

feeling of being afloat became that much stronger.
No north or south. No east or west. No way of telling what time it was – if, indeed, time still existed. Yet she sensed that she was being watched – not by Alex and the others, but by eyes that were moving in around her and silently pacing her. The hairs on her neck stood up, a ripple of dread passed through her, but she glanced at the sky, at that approaching break in the forest canopy, to see the lights rising and falling in sublime, silent splendour. This time, instead of frightening her, the lights seemed to offer comfort, and so she touched the amulet on her throat and felt a sharp, tingling shock.
The Yano drums were still beating, their insistent rhythms becoming ever more hypnotic, the noise growing louder every second and starting to make the trees shiver. Avril felt her head tightening, her thoughts streaming away from her, and she reached out for Alex's hand and then saw the night changing.
The break in the forest canopy was still a fair distance ahead of them, the lights more clearly visible as they rose and fell before the stars, turning that particular patch of nocturnal sky into a startlingly vivid circle of many colours. And now, straight ahead, in the area beneath those spinning lights, rose a large, fan-shaped, pulsating glow that made the tree trunks and tangled liana shimmer.
Tree trunks? Or human beings? Avril blinked and rubbed her eyes. She looked again and saw that great dome of shimmering light expanding as other lights, much smaller, silvery pellets on pulsating yellow, grew bigger while gliding through the trees, coming directly towards her.
Avril froze – they *all* froze – and just stood there as the lights surrounded them, drifting languidly through thin air, rising and falling on invisible waves, their outer edges spinning rapidly, all the colours of the spectrum, around inner cores that resembled the black pupils of huge, staring eyes.
Avril studied them, fascinated, feeling awe rather than fear, and then noticed that their dark cores, which at first had appeared to be opaque, now, up close, looked like the entrance to narrow tunnels that stretched obliquely up to the sky and beyond, to the stars.
The lights spun and bobbed around her, black pupils revealing the cosmos, soothing her passage into another world beyond time and space. She felt divorced from herself, knowing enchantment instead of dread, and moved forward again, following Alex's hazy outline, towards that great, fan-shaped,

pulsating glow beyond the trees straight ahead.
Wondering what Alex was thinking, where Antonio and Father Benedict might be, she glanced down at the ground and saw a mass of seething life: thousands of giant insects and spiders and rodents, scorpions and snakes of every kind and gleaming black beetles, all advancing with her, heading towards the shimmering dome, neither touching her nor causing her revulsion as they would have done previously. They were being drawn towards the light, just as she was being drawn towards it, and she viewed them with eyes no longer shocked but now able, or willing, to recognize the beauty within the horror.
The ground, which had been warm and soggy, now seemed incorporeal: the mass of insects and other creatures had turned into a shifting sea, and it seemed, because her feet could feel nothing below them, that she was walking on air.
The fan of light had become enormous, a great dome straight ahead, its yellow striations beaming obliquely through the shimmering trunks of the trees and blending with the numerous smaller lights that were spinning and bobbing around her. It was like being inside a rainbow, in a multi-coloured, enchanted garden, and when she looked at the spinning lights, and saw the distant stars through their dark cores, she felt herself being drawn up towards them, her soul leaping to freedom.
Something touched her right hand – it was Alex, wanting to hold her – and as their fingers entwined, as they moved closer to one another, as they approached the forest clearing in which the great dome of light was rhythmically pulsating, as the edge of the light touched them and seemed to make them dissolve, she felt an affirmation of faith, her former doubts dropping away like unlocked chains, her love leaping on wings of rapture to wrap itself around Alex and carry him, enfolded and protected, to the shimmering light's dazzling vortex.
She lost Alex in there. He released her hand and hurried on. She blinked and rubbed her eyes, overwhelmed by what she was witnessing, and then, stepping forward, saw Alex and heard him, his voice exploding out of an abrupt, stunning silence and reverberating, as if magically amplified, through the dream she was living.
'*Peruche!*' he cried out.

Chapter Eight

Father Bendict heard ‘ *Peruche!*’ and was startled back to awareness, shaking his head to clear it and squinting sideways at Antonio, then ahead through the incandescent, dazzling light. He no longer felt afraid, but merely filled with curiosity, still unable to comprehend this new reality, wondering if he was dreaming. Yet he had just heard Alex shouting – shouting the name of old Peruche – and as the silence dropped abruptly and the drumming stopped, he saw Antonio nearby, not moving, simply staring, then followed his friend’s gaze and held his breath at what he saw just in front of him: two silhouetted figures, one standing, the other seated, both distorted in the brilliant, pulsating light, neither saying a word.

‘Oh, dear God,’ Father Benedict said.

Scarcely able to accept what he was seeing, he turned away in confusion and thought he saw, just outside the immediate vicinity, not more trees but unobstructed, star-flecked sky and, on either side, at the edge of the bizarrely illuminated forest clearing, vast stretches of featureless darkness where the forest, by normal logic, should have been.

Even more confused, a little dazed, he looked down at his own feet and saw, instead of solid ground, a shifting mass of forest wildlife – insects and spiders and beetles and snakes – a sea of life on the move, neither touching him nor frightening him, simply existing, like himself, in the kaleidoscope of the shimmering, prismatic air.

Slightly stunned but unafraid, he glanced across at Antonio, wondering what he was thinking as he stood there, staring silently in front of him; yet even as he studied him, Antonio sank to his knees, then stretched out on the ground and curled up like a child in its bed, oblivious to that shifting mass of insects, spiders and snakes which, like a wave in slow motion, flooded over him and soon covered him completely.

Since what he was seeing seemed perfectly natural, Father Benedict was not concerned, so he stepped forward again, feeling as if he was walking on air,

and eventually stopped close to the silhouetted figures who were, he felt, awaiting his arrival.

Avril came up on his left, the light making her dark hair luminous, and then Alex was in front of him, going down on one knee, hazy and unreal in the streaming, glittering radiance, his gaze focused on the figure seated in front of him: the old Indian, Peruche.

Father Benedict also went down on one knee, hardly knowing what he was doing, his thoughts vaulting back to the days of his mission, to when he still possessed the remnants of his faith and regularly visited the plantation. Yes, he had been a real priest then, indeed was *still* a priest, and had involved himself deeply in Alex and his peculiar environment. Frank Poulson had been part of that, the black scar on Alex's childhood, and Peruche, also, had been part of it: a loving, if exotically different, guide through the thickets of childhood.

He, Father Benedict, the priest tormented by doubts, had likewise tried to guide Alex, his surrogate son, the child he'd never had, the personification of the faith that he represented but could not quite accept
– and had, in so doing, often resented the old Indian's teachings, thinking him either a pagan or a charlatan, but either way spiritually dangerous. Yet Alex had learned from him – not only magic, but virtue and strength – and now knelt before him in a dazzling haze, as if their parting had never been.

Was this Peruche some kind of ghost? Was this luminous light of the Otherworld? Father Benedict wondered about this, his thoughts drowning in confusion, and then he glanced at the figure who was standing just behind Peruche, blinked and then looked again and recognized the young Indian worker, Mengrire.

'I can hardly believe you're still alive,' Alex said to Peruche. 'We all thought you were dead.'
'No, my young white friend,' Peruche replied. 'Right now, I am very much alive – but alas, my mortal life must end soon.'
'I don't – '

‘I’ve come here to meet my end – and you, to meet your beginning.’
‘My beginning?’
‘In renewed faith or blasphemous disbelief. What transpires here will decide which.’
Staring at the young Yanoama Indian, Mengrire, Father Benedict saw the ugly scars all over his body where the Yano had tortured him. Mengrire was staring straight ahead, as if he hardly knew they were present. He was holding an unusual machete, its handle embedded with gemstones.
‘*Como esta*, Mengrire?’ Father Benedict said to him. ‘I’m delighted to see you again, but what are you doing here?’
‘He can’t talk,’ Peruche said. ‘The Yano tore out his tongue. He is here because I called him to my side by using the wind.’
‘And what do you want with him, Peruche?’
‘I’m too old to carry what he holds in his hand: the jewelled sword which, when turning to flame, will open the Gateway to the Otherworld. And through that Gateway, my friend, you must go before this night has ended.’
Wondering what Peruche meant by that remark, Father Benedict looked behind him, through that iridescent light, and saw that the sea of insects, spiders and snakes had stopped moving, but that it still covered the body of the supine Antonio like a thick, living blanket. Strangely unaffected by this sight, he turned his attention back to Peruche who, sitting there on the ground in front of him, was also bathed in the radiant light, his face even more wizened than before, his body scarcely more than skin and bone.
‘Your words are just confusing me,’ Alex said. ‘Where are we? This isn’t the normal rainforest. Where are the Yano?’
‘You’ve arrived at your destination,’ Peruche replied. ‘You’ve found exactly what you were looking for, but do not recognize it. You are illuminated on the rim of the Gateway to the Otherworld and must either venture into it or turn away, thus deciding your fate.’
‘The Gateway? I can’t see a gateway. I can only see the brilliant light, a star-filled sky beyond it, what seems like great darkness on either side. I think the light is playing tricks with my eyes, but that’s all I can see.’
‘What you see is the true reality. You are, indeed, at the Gateway to the Otherworld. There are many such gateways scattered all around our world: small areas where time and space cease to have meaning and through which lies the Otherworld, the Oneness of the Eternal All, where the finite meets the

infinite, where the past meets the future, and where good and evil wage an eternal war which, though necessary to balance the universe, tears the hearts of we mortals. This light illuminates the Gateway. The mortal world is behind you. The star-filled sky you see behind me, and the darkness on either side of it, represent the boundaries of your world and the beginning, or entrance to, the Otherworld.'

'So where are the Yano?'

'Behind you – in the rainforest. The Yano guard this particular Gateway, keeping mortals at bay, acting on behalf of the forces of darkness who came here long ago. They're right here by the Gateway, existing only to practice evil, either killing or torturing those they capture, occasionally enslaving them.'

'They deliberately let us come here,' Father Benedict said. 'There must be a reason.'

Peruche's withered face revealed nothing, his ancient body as light as a feather, seeming to hover magically above the ground.

'The Otherworld, or the Oneness,' he repeated, 'is where the finite meets the infinite, where the past meets the future, where evil meets good, and where you, the witnesses, the bridges between one world and the next, must choose between right and wrong, good and evil, not only for the sake of your individual souls but also for the struggling soul of all humanity. You have been called here for that purpose, to be tested in the flames, to choose at a terrible cost which way you will go. Thus, just as Abraham was asked to sacrifice his own son, so, too, will you have to make a great sacrifice in order to earn your redemption. The Yano, who are behind you, but cannot be seen while you're in this holy light, allowed you to survive and reach this place because they know you are needed.'

Father Benedict looked around him, first at Alex and Avril – both of whom were kneeling just in front of him, their eyes fixed on Peruche – and then past Peruche at the star-filled sky hazed by the dazzling light, and, finally, at the frightening darkness on either side where silence reigned over the Nothing. Shivering, he withdrew into himself, casting his mind back to the plantation, remembering the day he had sat with Alex in front of Peruche, listening to the old Indian's description of this very place. At that time he had refused to even consider the possibility of such a place, yet now here he was in this holy light, surrounded by the miraculous.

He glanced around him again, at the smaller lights within the shimmering globe, watching them bob up and down while spinning fiercely, their outer rims all the colours of the spectrum, their inner cores, like huge pupils, actually acting as doorways to the stars that formed part of the Otherworld. So, staring at them, he recalled Peruche's words: '*The lights represent the Good. They constantly wage war with the forces of darkness. The Yano, though mortal, are the slaves of the Dark Forces and exist on the perimeter of the Gateway that leads to the infinite. The lights, which we see rising and falling, pass in and out of the Gateway which separates this mortal world from that place where time and space have no meaning…*' And so, here they were, on the glowing edge of the mortal world, about to either turn back or leap off into the boundless unknown. Father Benedict, seeing the lights on all sides, was reluctant to make that leap.

'Now that we're here,' he heard himself asking Peruche, 'what happens if we decide to turn back? Will the Yano then murder us?'

'No, priest, they'll let you go. By turning back, you'll have betrayed your faith and, in so doing, given victory to the forces of darkness and let them enter your heart. This is why they've let you come this far. Because you represent the Good, and because, if you fail, the forces of darkness will have captured you soul

– exactly as they've captured the lost soul that you've come here to rescue.'

'Laura Wellman?' Alex whispered emotionally.

'Yes, Laura Wellman, she who was destined to bring you here and compel you to choose.'

Father Benedict felt Alex's pain and Avril's all too human resentment. He saw them glancing at one another, both slightly dazed, yet still clinging to the feelings that had sustained them in the material world. They could not let one another go, nor leave the past to bury itself, and their mutual trust, through which doubt flowed like a river, was now about to be tested.

Their trust – and his faith. His belief in God and love, having betrayed the former for the latter and now possessing neither.

Father Benedict shivered, his terror eating at him, the radiant light compelling him to stare into the prism of Judgment Day. That prism was Peruche's ancient face, now hazed in the shimmering light, being subtly altered and distorted as he spoke again.

'Laura represented humanity in its many imperfections, confused and

thinking herself a sinner in need of redemption. You, Alex, represented perfect innocence, the undefiled child who, like all children, eventually lost his innocence and the magic that innocence had embodied. You, Father Benedict, were the disciple who betrayed his Lord, the one who, like the fallen angel, Lucifer, surrendered to vanity and lust, thus being condemned to wander in darkness and the pain of self-hatred. Together, all of you were one, working through one another, all part of the goodness that in various ways was corrupted in order that it might find greater purity in the light of redemption.'

'And Laura?' Father Benedict asked.

'Laura is now in the Otherworld, her soul enslaved by the forces of darkness, and in order to set her free from that enslavement, you must first free yourselves. You have come here, where time and space no longer have meaning, where past and future exist in the one eternal present, to represent humanity, its whole history of doubt and fear, and in so doing either ensure that the Good shall endure against evil or that evil shall have dominion over those not yet born. The war between good and evil goes on throughout eternity, and you, briefly plucked from time and space, must commit yourselves to it. You are here for that very purpose. You are here to make your choice.'

Father Benedict glanced around him, again wondering if he was dreaming, the light dazzling his eyes, enclosing him in its dome-shaped radiance, holding back the darkness on either side and the hazed, star-filled sky. He felt divorced from reality, betrayed by his senses, the ground beneath his feet as insubstantial as air, the light distorting all he surveyed, the carpet of insects and other creatures perfectly, unnaturally, still, as if indeed they had been frozen in time and space and would only return to life when he awakened to the real and familiar.

'So Laura's lost in the Otherworld?' he heard Alex whispering, his voice trembling between grief and simple confusion. 'Does this mean she's dead?'

'Dead?' Peruche replied. 'Of *course* she's dead! And her soul is crying out for release from the first abyss of the eternal darkness. She cries out but you don't hear, because you gave away what you should have kept: the sacred amulet that I gave you in trust and which now rests on *her* throat.'

His rheumy gaze was fixed on Avril, making her flinch, her right hand automatically going up to her throat, her fingers covering the amulet. Peruche

stared at her a long time, his eyes opening and closing repeatedly, before turning, with a visibly weary movement, to concentrate on Alex.

'When you gave the amulet away, you also threw away your moral strength: that virtue which, by being based on total innocence, opened you up to the magic powers of the Good and protected you from evil. Thus, when you gave the amulet away, you became sick and self-destructive, letting vain dreams and hopeless passions rule your heart and make you, like the priest, lust for the gratification of base desires that could have no positive consequences. You and the priest are brothers, two sides of the same coin, both victims of the woman who had only one purpose: to seduce you into coming to this place and find either eternal damnation or the healing light of redemption. As I told you in the plantation, her coming was preordained, and her obsession with evil, which drove her into the arms of the Yano, has inevitably cast her into the first abyss of the eternal darkness from which she can only be rescued by your subsequent actions. She led you here and now you must release her… or condemn her to hell.'

Father Benedict despaired, now understanding what he had done, his heart breaking when he saw a door opening to reveal his great sin. He could still not fully accept that he had done it, but he knew that sooner or later he would have to face it or lose his soul entirely.

Yes, all of it had truly happened and now he could clearly see the consequences: Laura's contact with the Yano had been her first step through the Gateway, her rape and humiliation taking place there, just beyond the shimmering light where time and space found oblivion. They had impregnated her by the Gateway, where the war between good and evil constantly raged, and then cast her back into the mortal world where their seed would find its fruition. The forces of darkness *did* rage on Earth, entering and leaving through various gateways, and here, in the rainforest, a vast, unexplored territory, they had taken up residence in the hearts and minds of the unfortunate Yano and, through them, were hoping to spread their blasphemous gospel to the rest of mankind.

Laura *had* been possessed by them, impregnated with their evil, and then, after murdering her own child in a desperate, pitiful attempt to destroy that evil, had committed the most unpardonable sin of all, thus innocently condemning herself to the first abyss of the bottomless hell of the Otherworld.

Yes, Father Benedict despaired because he, too, had been tricked, his own crime a re-enactment of Laura's, the seal of doom on his soul.
'Why grieve?' Peruche said. 'Is that all you can do? I thought you had come here for more than that: to purge your separate souls, that single, human soul, and, in setting Laura Wellman free from the abyss, enable both of you to find redemption. Yes, you and young Alex… raised on high before God.'
'I can't… I just can't… admit the truth.'
'Then she is doomed – and you will be.'
Suddenly, Mengrire hurried forward, snatched the amulet from Avril's throat and darted away again. He dropped the amulet in Peruche's lap, glancing down as it was picked up, then resumed his rigid stance behind the old Indian, his machete slanting across his chest, one hand firmly gripping the jewelled handle, the other holding the blade.
Peruche held the amulet up in front of Avril and waved it gently from side to side, watching as her eyes moved left and right, growing bigger each second.
'You, too, have a purpose,' Peruche told her. 'Now stand up and walk past me and, unprotected, follow Laura Wellman's despairing cry into the unknown's great darkness.'
Father Benedict jerked upright, his heart lacerated by the sounds that reverberated in his head: the unmistakable sounds of Laura Wellman in torment, crying out words he could not clearly hear but which he nevertheless understood perfectly: words begging for help.
'*No!*' he heard himself shouting – and heard Alex shouting the same – and then Avril jumped up, her taut body washed in white light, and rushed away, passing Peruche and Mengrire, to disappear, with a startling, remarkable abruptness, outside the great dome of light.
Almost simultaneously, before Father Benedict could react, Mengrire stepped forward until he stood beside Peruche, then raised the jewelled sword above his head and spun it around. Its reflected light was blinding, the striations cartwheeling, and then the sword became a pillar of fire.
The dome of light blinked out, plunging them all back into darkness, and as Father Benedict stood up and saw Alex doing the same, then starting to run, he beheld a stunning sweep of sky, the stars multitudinous and brilliant, not diminished by three vast moons, the light of which beamed down through the night: over an immense, featureless, flat plain, over Mengrire's flaming sword, and, most terrifying of all, over the mass of Yano warriors who,

painted and feathered, seemingly oblivious to everything, were advancing in a lengthy semicircle, jabbing at the air with long lances, their shields forming a solid wall.
At that moment, Father Benedict fused with Alex, sharing his every thought and emotion, and turned to scan the vast, flat plain towards which Alex had run.
Avril was there, not far away, stretched out on the ground, face down with hands folded beneath her forehead, not moving at all, her white clothes fluttering in what seemed to be a modest breeze, the moonlight illuminating her dark hair where it blew out above her.
Nothing else: just Avril, lying unconscious on that alien plain, the sky filled with stars that looked like silvery fruit, the three moons like huge eyes staring down at her.

Chapter Nine

Stunned, Alex stared at her, hardly knowing what he was seeing, wanting to run forward and help her, but instead turning his gaze to where fresh pillars of flame illuminated in long strips of flickering yellow light that fearsome mass of advancing, chanting warriors, all of whom had painted their faces in various demoniac ways, emphasizing the wildness in their eyes and their bared, gleaming teeth.

Not understanding where he was, Alex turned away from them, unable to reconcile this immense space with the rainforest through which he had just ventured before finding Peruche.

Where was Peruche now? Where had Antonio gone? He looked across the featureless plain, still stunned by its absolute emptiness, and saw Avril as a fluttering white object in the encompassing darkness that only ended where the starry sky began, its chunky stars and three limpid moons looking too close for comfort.

Hearing the Yano warriors behind him, he suddenly started running (as Alex or Father Benedict; it made little difference now), wanting to fling himself across Avril before the warriors reached her.

The Yano chanting was very loud but magically enclosed in an outer silence, and then, out of that silence, came the sound of rushing water, and he looked back over his shoulder, stopped with shock and turned around, saw a waterfall pouring down out of somewhere high above, out of some invisible source located mysteriously in thin air, to form a river that flowed obliquely across the ground just behind him, creating a natural barrier between him and the advancing Yano warriors.

What he was seeing was a miracle, either a mirage or a trick of time, and now, as he stood there, staring dumbfounded across the river, he heard a sound that chilled his blood and broke his heart simultaneously: the voice of Laura Wellman, now shrieking, now calling out for help, now sobbing and groaning and choking in anguish and despair.

'God, oh my God!'

Looking across that rushing river, he saw the rainforest reappearing, lights rising and falling above the trees to illuminate the Yano. There was something unreal about them, they seemed slightly incorporeal, but the sound of the drums was clear enough, their pounding fast and vicious, and even as his head tightened and Laura's wailings tore at his heart, he saw that the Yano had changed, that they were mingling with one another, some dancing, some chanting, spears swinging, shields clashing, and then – *oh dear God!* – he saw Laura stretched out beneath them, her body smeared with blood and mud, her long red hair tangled over her face, some of the warriors leaning over her and holding her down while others, their bodies gleaming with sweat and warpaint, brutally had their way with her.

Father Benedict and Alex wept (now one and the same, they shared the same grief) and even as their tears flowed, dropping into the rushing river, the water, as if anticipating that they were considering swimming across it, abruptly parted near the middle, boiled and roared in furious fountains, as a giant anaconda, wrapped around a struggling alligator, shot up into the air, twisting and writhing as it crushed its victim, and then both fell back down, one snapping and whipping its tail, the other tightening its killing grip, and crashed back into the turbulent water to continue their fight to the death. Then

the whole river went wild, turning into a nightmarish scene, filled with extraordinary beasts – six-legged lions and calves, flying eagles with human heads, a lamb with seven horns and seven glittering eyes, giant doubleheaded serpents and grotesque, jawless crocodiles, and manatees whose bodies were no more than bloody rib cages where the bloody teeth, also tearing at sloths and anteaters and deer and pumas, had stripped the flesh clean off the bone while the piranhas, massed together in a frenzy of bloodlust, devoured entrails and brains… all of this in the river that ran past the muddy bank upon which, her cries rising above the bedlam, Laura was being abused.

Father Benedict and Alex, now one, trembled in mortal terror, aware that they were witnessing the first abyss of the eternal darkness from which, if they had the courage of faith (the faith they had both renounced) they could possibly rescue Laura Wellman and thus set her soul free.

Yet how could it be done? Could faith renounced be taken back?
Alex turned to the front again, leaving Father Benedict behind him, and seeing Avril lying there, face down on the flat plain, immediately ran towards, now under a vast star-flecked sky of the most vivid hues.
He saw another man, himself, perhaps his reflection or doppelganger, at the far side of the outstretched Avril, racing towards him.
Shaken, he slowed down, as did his opposite number. He lowered his hands, as did his opposite number, then started running towards himself again, his approaching self terrifying him.
A lone comet crossed the sky, casting its light upon the plain, and he stopped running, staring wildly at himself, afraid to go any farther. He looked straight at himself, at that reflection in thin air, and then felt the ground shaking beneath his feet and heard a deep, muffled thunder.
Panic-stricken, he rushed towards Avril and then ran through his other self, his reflection, his doppelganger. When he stopped running, his stomach lurching, and spun around on one heel, he saw that where he had just been – and where Avril had been lying – had since become the near edge of an enormous black hole filled with bright stars and giant, spinning moons. Avril was gone – she was nowhere in sight – and he found himself looking *down* at the sky, which seemed to go on forever.
Seeing that dizzying sky below him, he felt the ground shake again, heard the

muffled bass rumbling, and found his eyes drawn up to that other sky where the three limpid moons, each ringed with pulsating crimson rays, began moving apart and then slowly crossed the sky until they were above the enormous, star-filled hole that had formerly been the flat plain. And then, as he stood there, his senses reeling at what was happening, some of the stars below him started flying up towards him, rapidly growing larger, their cartwheeling striations fencing with one another, the light exploding in silvery waves, and then they rushed out of the Nothing where the Earth should have have and ascended as fiercely spinning, multicoloured discs to the sky directly above where, after forming elegant arcs, they started falling again, dropping back down to the sky below as others ascended.

He stood on the rim of the Gateway, looking down through boundless space, then looked up and saw the same space beyond another brilliant, alien sky. The smaller lights rose and fell, passing in and out of the Gateway, going to and fro between the World and the Otherworld in this zone where time and space had been rendered meaningless and all things became one.

His human self should have been dwarfed, his emotions overwhelmed and then obliterated, yet when he thought of Avril and Laura, two women, one soul, his pain was like the cry of all the world, rising up from some buried dungeon of the self and squeezing the life from his heart. The Otherworld was love and pain, the rose wrapped within the thorns, and he gazed at the sky above, saw moons shifting and colliding, saw beautiful stars exploding to become even more beautiful rainbows, and understood that destruction and renewal were the bricks of all life, and that just as the faiths of childhood had to wither before maturity, so, too, could the sorry wisdom gleaned from experience turn into faith.

Then he saw Avril. She seemed to be floating on air. She was still lying horizontally, her forehead resting on her crossed arms, her face, which before had been turned down to the earth, now turned down towards that awesome, alien sky at the other side of the Gateway. She was just lying there – on nothing – the smaller lights rising and falling around her, the lush stars and shifting moons spreading out below her in that vast, boundless void. And at the other side of the black hole (a hole or invisible surface?), a good distance away, where the rushing river had been, flowing past Laura and the barbaric Yano warriors, was nothing but another dark plain that seemed to go on forever.

Swallowing his fear, he started forward, determined to risk all in reaching her – started forward off the rim of the black hole and stood over the sky below. Yes, he was standing, stepping tentatively across the stars, out over that vast void in which the great moons wheeled, feeling himself to be less than a speck caught between hell and heaven. He kept going, a sleepwalker, aware of himself as someone else, heading straight for the now unconscious, white-clad figure of the woman he loved.

The smaller lights rose and fell about him, beautifully coloured and radiant, forming elegant arcs high above his head before descending again. He did not dare look down – that endless drop would have raped his senses – but instead kept his gaze fixed on Avril as he gradually approached her.

She still appeared to be lying on thin air – just as he felt that he was walking on thin air – and indeed, when he drew close, when he could actually make out her features, he noticed that her limbs and clothes were slightly flattened beneath her, as if she was truly lying on something solid but invisible – though the lights still rose and fell with unsurpassable grace all around her, passing easily, with no sign of obstruction, from one world into another and then back again.

Eventually reaching her, he knelt beside her to roll her over, but just then the ground (what ground?) shook and a deeper darkness surrounded him and he raised his head and gazed across the darkened plain as if he had sensed what was coming.

He saw it: a white horse, racing out of a rolling darkness, galloping across that boundless plain with a deeper darkness following it, blotting out the stars as it advanced from boiling black clouds. The horse was snow-white and magnificent, its mane whipping out behind it, steam emerging from its nostrils as it left the dark plain and galloped across the hole above the stars as if running on glass. It made no noise at all (though the darkness behind it seemed to rumble) and as Alex rose to his feet in wonder (and wondering what was shaking beneath him) he saw another horse, emerging miraculously from the east, a flaming red horse that sprang out of that endless darkness and also headed towards him. Glancing west, he saw another, a magnificent black horse emerging from blackness, and then, as if by instinct, he glanced to the north and saw yet another horse, a spectral, off-white beauty, bursting out of a boiling darkness that advanced from a lighter darkness and galloping with the black clouds pursuing it across the great, star-filled Gateway.

Alex dropped to his knees again, resting his hand on Avril's head, then looked east and west, north and south (if such existed), and then heard his own voice, also the voice of Father Benedict, whispering the only words he could think of as the horses galloped towards him:

' And I looked, and behold a pale horse: and his name that sat on him was Death, and hell followed with him…'

So saying, he shivered, and rolled Avril onto her back, and when he had done so, found himself looking down upon Laura, her flaming red hair entangled across her face, her eyes closed, her suntanned skin smeared with blood and mud.

She was obviously dead.
Alex groaned, as did Father Benedict, both inhabiting the same skin, and then looked in every direction, at the four horses galloping towards him, and saw the great darkness rolling over the wondrous animals and then pouring over the rim of the Gateway to swirl around the lights that rose and fell in serene, silent splendour.
Yet his skin crawled with revulsion, he felt the evil coming towards him, and he knew that he was witnessing the forces of darkness moving against what was good. Lightning daggered out of the sky – the sky above and the sky below – and then he heard the roaring thunder, the terrible sound of dividing firmament, and then the moons became as blood and the suns as black as pitch, and the stars below seemed to roll back as the forces of darkness invaded them.
He knew they would come for Laura and carry her off in that approaching darkness, that they would cast her from this terrible abyss into hell's deepest pit; and even as he looked about him and was tempted to flee – seeing the black clouds rolling towards him, coming at him from all sides, bolts of lightning daggering through them, flames and smoke belching from them – the ground around her cracked and split – a solid ground that had just materialized – and the earth upon which she was suddenly lying began sinking beneath her.
Someone screamed Avril's name and Father Benedict jerked his head up, seeing Alex at the other side of the splitting earth, reaching down to Laura.

‘Avril!’ he screamed. ‘*Avril!*’ And then reached down to Laura, his eyes wide and distraught, his jaw opening and closing mechanically, his hand falling too short as the ground upon which she lay shifted and took her out of his reach. ‘Avril!’ he screamed again. ‘*Avril!*’ And then stared wildly at Father Benedict, oblivious to the boiling black clouds that were swirling over his head.

Their eyes met for a brief moment, both dazed, uncomprehending, and then the clouds rolled over Alex as the flames pushed him back and Father Benedict, towards whom the broken earth was now advancing, reached down to grab Laura.

He was close, but she was sinking, something roaring beneath her, the red hair tangled across her closed eyes as flames leapt up around her. Father Benedict clawed at her, his fingers opening and closing frantically above her; and then, as she sank deeper, as the greedy flames licked at her, he felt the full weight of his guilt – of the dreadful deed itself and his refusal to face it – and he accepted how she had died, and the abominable trick that had been played upon both of them, and knew that he must now pay the price or forever be damned.

Father Benedict was devastated, his spirit destroyed by guilt and grief, then he felt himself picked up and hurled backwards through swirling waves of heat. He struck the ground and rolled over, choking on loose soil and grass, saw tall trees directly above him, a few sections of starry sky, then heard the crackling of flames and smelt smoke and forced himself to sit upright, wondering what had actually happened and where he really was.

Chapter Ten

He was back in the forest clearing, Alex lying unconscious beside him, his blond hair disarrayed, one leg bent at a peculiar angle. Peruche was nearby, stretched out on his back, close to what appeared to be a heap of smouldering rags near some still-burning bushes, the whole clearing surrounded by a large ring of charred, depressed earth where the edge of the dome of light would have been. Antonio was just outside the perimeter of that charred ring, sitting up and shaking his head, his body no longer covered in insects, the ground around him perfectly normal. There was no sign of the Yano – they might never have existed – but then, when Father Benedict studied the clearing once

more, he found to his ineffable horror that there was also no sign of Avril.

‘Oh, dear God,’ he whispered.

Alex groaned and opened his eyes, tried to move and gasped with pain, fell back and looked around as best he could by just moving his head. Father Benedict went to him, smiled at him, examined his leg. He saw that it was broken and told him so as Antonio joined them. Alex cursed in frustration, though he was clearly still dazed, and Father Benedict, with Antonio, helped him sit upright against a tree trunk, wincing each time Alex winced, murmuring comforting words.

‘What happened?’ Antonio asked. ‘What did I sleep through? I dreamt that I was lying there covered in insects and other creatures, and that you two and Avril disappeared when that great dome of light blinked out. Now old Peruche’s lying there, apparently dead of natural causes, and Mengrire seems to have been burned to a cinder where those bushes are still smouldering. What happened? *Where’s Avril?*’

Alex’s whole body stiffened as he stared around in rising dread, then mumbling some inaudible prayer he returned his gaze to the front. Father Benedict held his gaze, unable to tear his eyes away, remembering what they had shared in that world beyond the Gateway, the Otherworld, when he, as Alex tried to rescue Avril, had likewise tried to pull his beloved Laura out of the consuming flames of the abyss.

Laura and Avril: had they been one and the same? Had they, in that place where time and space had no meaning, been fused together as one soul (as all souls must finally be one) in order that he and Alex, two wanderers from the right path (joined together briefly as one and the same in the Otherworld), could choose between fleeing from the truth or finally facing up to it, no matter the cost?

Father Benedict looked at Alex, seeing the world’s pain in his blue eyes, and also, in that pain, seeing the steel of accusation, the dawning of a truth that had been glimpsed in the Otherworld, and now, irrespective of the possibility of more pain, would need to be confirmed in this mortal world.

‘I know where Avril is,’ Alex said. ‘Damn you, Father Benedict, I know. But this question I have to ask you right now: *What really happened to Laura?*’

And there it was: the question that Father Benedict had dreaded, ringing like a bell of doom in the silence of the forest clearing where the darkness was giving way to dawnlight and dew glittered like nature’s tears. He glanced desperately around him, wondering if he could find the courage, the soaring trees and tangled lianas seeming to press down upon him, the weight of the guilt and grief crushing him further, squeezing the breath from his lungs. He rocked back on his heels, covered his face with his shaking hands, almost wept, but managed to contain it and then lowered his hands to his side. He glanced once at Antonio, hoping to steal some courage from him, and then, taking a deep breath, licking his dry, shivering lips, he forced himself to stare straight at Alex and tell him the truth.

‘I killed her,’ he said.

Chapter Eleven

The dawn light was breaking through and the rainforest had fallen silent when Father Benedict, his guilty eyes fixed upon Alex, offered his final and most shocking confession, his words cleaving the chilly air.

‘I killed her,’ he said. ‘With my bare hands, I killed her. I killed her because I loved her, because I feared for her soul, and because she begged me to prove my love to her by putting an end to her misery… And I did what she asked of me. Laura never really returned to the Yano camp; I killed her and buried her.’

Leaning forward, he pressed his hands against his temples, as if trying to crush his own skull, while Alex simply stared at him, too stunned to respond, scarcely able to believe what he was hearing, let alone take it in. The tree trunk was rough against his spine, the soil beneath him damp and cold, and he saw lines of grey light beaming down through the high, close-knit trees. He wanted to get up and run away, to feel the cool air slapping his face, but

when he thought of where Avril was, and listened to the priest's words, he knew that he would have to sit it out until the nightmare completed itself.

He said nothing, did nothing, letting his former friend suffer alone, staring at him as he visibly shivered with his terrible anguish. Alex was not moved by pity, instead letting his rage run, then encouraging that rage to turn to the contempt that alone could protect him. There could be no forgiveness, neither for friendship nor for love, and as he watched the priest suffering, he kept thinking of why they had come here, of his own guilt over Laura, reminding himself that Avril was lost in the Otherworld to which Laura had brought them.

He said nothing, did nothing, letting his contempt defeat his pain; but as the priest paused for a moment, wiping his eyes with a shaky hand, Antonio moved closer to him, kindly murmuring words of comfort, and then slid his arms around the priest's shoulders and gave him a hug.

'It's okay,' Antonio said. 'It's all right. It's all over now.'
He glanced pleadingly at Alex, but Alex pointedly ignored him, instead keeping his eyes focused on Father Benedict as he sat up, took a deep breath and straightened his shoulders, a grey light falling over him.
'Oh, God, Alex,' he said. 'Please try to understand. You have to try imagining how much I loved her and what her suffering did to me. Her suffering was terrible, beyond endurance for both of us, and what I did, in the light of what I knew, I did as an act of pure love, seeking God's mercy.'
Putting his head back, he looked up at the sky, as if hoping to find Laura's face there.
'Oh, my boy, you should have seen her. I mean after her dreadful ordeal. When she emerged from the rainforest and fell into my arms, after her rape by the crazed Yano and her subsequent experiences beyond the Gateway to the Otherworld, she was, at least by normal standards, an utterly destroyed human being, pregnant with what she believed was Satan's child and, because of that, rapidly surrendering to madness.'
He shook his head from side to side, displaying his bottomless, tormenting grief, then returned his gaze to Alex, his eyes wet, but not weeping.
'As I've already told you,' he said, 'I tried to save her from herself – hiding

her away in that Indian village, looking after her all those months, even personally supervising the delivery of her child, all the time trying to talk her back to sanity – but then, when she drowned the child, when she realized what she'd done, she give in totally to a madness that was based on incurable remorse. For indeed, if she'd feared the baby – or at least feared what it might be – she found out, when she killed it, that her love was even stronger than her fear, and that no matter how long she might live, she would never be able to forget her awful deed, nor forgive herself for it. In a sense, then, when she buried that dead child in the rainforest, she also buried her mortal self.'

Father Benedict leaned forward and hammered his fist into the earth. He kept pounding at the earth like someone trying to smash his reflection in a mirror, until Antonio, again slipping his arm around his shoulders, pinned his hands to his sides. The priest nodded and sighed, acknowledging what Antonio had done, and eventually, when he seemed to have calmed down, Antonio released him.

When he looked up, his eyes tormented, Alex felt shame lance through him, remembering that this man had once been like a father to him, remembering his own pain over Laura's disappearance, remembering, also, why they had come here and what had happened to Avril. Yet he still tried to harden his heart against the priest's suffering.

'Oh, Alex, the madness! You have to understand her madness. It came out of her like flame from a spit and soon scorched me as well. And just as she was mad with grief and fear, so too was I mad with my love for her. A love that grew stronger and more unreasonable every day, because every day I was forced to observe her increasing helplessness, both mental and physical. Yes, I cared for her and tried desperately to understand her, and in doing so surrendered to the reasoning that only the mad can know. Yet the reasoning of the mad has its own peculiar logic, and so, in that mud hut, in the daily squalor of her base existence, I found myself agreeing with her when she told me that her life had to end.'

Alex briefly closed his eyes, travelling back down through himself. Finding a glimmering of sympathy in his depths, he came back up to his surface, opening his eyes to the priest and looking at him with his thoughts well concealed.

'Madness,' the priest said. 'An insanity based on love. The kind of love that raises a man from his body to a realm of transcendence. And so I listened to

her, holding my breath at each nuance, and eventually came to understand that her grief and fear were like the fires of hell to her. Yes, though having drowned her child in a perverted sacrificial act, she still believed she was possessed by Satan; believed it even more because she'd developed the conviction that if, as she sometimes thought, her child might in fact have been normal, not Satan's child, then Satan, in his diabolical cunning, had tricked her into committing the fratricide, thus truly stealing the very soul that she believed had already been stolen.'

He nodded a few times, as if confirming to himself that this was true, then looked up at Alex, his gaze steady, if dim and unfocused.

'Do you see what she was doing, Alex? Can you comprehend such a need? She'd lived all her life with the conviction that she was possessed, and now, either way, no matter which way she looked at it, she would always find the proof for that conviction and suffer accordingly. And so, dear God, she suffered, and finally came to the end of the road. And knowing that I, loving her, couldn't bear to watch her suffering, knowing also that I wanted to pay for the sin of loving her, both emotionally and physically, she begged me to prove my love to her by putting her out of her misery… by killing her, as she could not find the courage to do it herself, and then burying her – about this she was most adamant – beside her dead child.'

The grey light brightened slightly, bringing warmth but little reality, simply catching the priest in a misty dawn in which no birds were singing. The brief silence was acute, appearing to vibrate between them, and when the priest next spoke, squeezing his temples between the fingers of both hands, his voice was almost devoid of human timbre, at once sepulchral and tragic.

'So,' he said, 'she wanted to die, to make atonement for her sins, and also, I believe, to escape the anguish of her mortifying guilt. And I, her lover, convinced that her case was just, believing that whether or not she had been diabolically possessed, her suffering at the hands of the crazed Yano would not be forgotten, and that her sanity, in retreat from guilt and horror, would never return – yes, I, a priest, in an anguish equal to her own, held her in my arms one last time and agreed to do as she asked.'

He lowered his face to his upturned hands, sniffing a little, his body shaking, and eventually, taking another deep breath, raised his shoulders, straightened his spine, and kept his gaze steady.

'Laura didn't return to the Yano. What I told you was a lie. I took her into the

rainforest and there, to prove my love to her, I slit both her wrists, hugged her and kissed her, and let her bleed to death in my arms, talking to her the whole time. Then, as she had requested, I buried her where she was lying, in that very same patch of earth in which her dead baby lay. I killed Laura to release her from the demons that she thought were possessing her. I tried to free myself by setting her free… and I found only hell.'

Alex closed his eyes again, travelling back down through himself, searching for the innocent love he had known a few years ago. He saw the broad swathes of the river, the trees and shacks of the plantation, the awful room in his father's house where the blood had flowed too freely, the more placid and modest buildings of the mission at the edge of the forest. Seeing those, he saw his childhood, all the dark days he had numbered, all the pain and confusion he had suffered when his mother died and his father, in the bitterness of his personal failure, had treated him cruelly.

Who had rescued him from that suffering? Antonio Bozzano and old Peruche… and, later, this priest, Father Benedict, with his humour and affection. And then Laura Wellman: her seductive witchcraft, eventually driving him close to suicide… Who had rescued him and offered him comfort, if not this same priest?

Yes, the priest had looked after him and even suffered for him; and if indeed he had lied, or at least withheld the truth, he had done so in the hope of preventing the further pain he believed the unvarnished truth might lead to. That pain had not been avoided – Alex could feel it right now – but when he opened his eyes and saw the face of his old friend before him, the innocent love that he had thought was gone forever rushed back to envelop him.

He leaned forward, as best he could, feeling the pain in his broken leg, to reach out with a wavering hand and gently squeeze the priest's shoulder.

'Oh, Father Benedict,' he said. 'My good friend… It's all in the past now. Forget it. Let's live again.'

The priest quivered like a bow string, sniffed back threatening tears, sat upright, closed his eyes, took a deep breath, and then nodded his head in a grateful manner, a slight blush on his cheeks. He raised his right hand, let it lie on Alex's hand, opened his eyes again and smiled, his haggard features brightening with relief.

'Yes,' he said, 'it's over, thank the Lord. At last it's all done.'

'No,' Antonio said. 'Not quite done… I think Peruche's alive.'

Chapter Twelve

Alex looked across the clearing to where Peruche was spreadeagled. He saw one withered hand upraised, the sacred amulet, dangling from crooked fingers, being swung from side to side like a pendulum.

While Antonio hurried towards him, muttering a joyful imprecation, Alex glanced at the priest and saw his eyes brightening. Father Benedict started to say something, to put his feelings into words, but Alex simply shook his head from side to side and gave him a smile.

'Come here,' he said. 'Help me across the clearing. I have to talk to the old man.'
Father Benedict did as he was told, dragging Alex across the clearing, and Alex gritted his teeth until he was there and could steady his leg again. He leaned back against another tree, looking down at the spreadeagled Indian, but Peruche, even at death's door, hardly gave him a glance, instead turning his rheumy eyes upon Father Benedict and nodding judiciously.
'I've been waiting for you,' he said, speaking Portuguese. 'I'm dying and wish to finish it, but I can't let myself go until the English girl is brought back to this world. Do you understand, priest? The two women share the same soul. Beyond time and space this doesn't matter, but here, in the material world, Alex suffers because of it. And you, priest, whose faith was weak, who killed your woman out of love, have yet to regain the faith you lost when you shovelled the soil over her body, thinking, as you committed that gross stupidity, that you were doing the right thing,'
Peruche shook his head wearily, a look of disgust on his withered face, let the amulet swing from side to side and kept his gaze on the priest.
'You were cheated,' he said. 'The devil used your love to cheat you. By killing the American woman, you handed her over to the forces of darkness and also paved the way for your own downfall, which came soon enough. Yes, priest, you were cheated – they used the American woman to enslave you to them – and now you must reverse that position and regain your soul by defeating them. Do you understand, priest? Set the two women free and thus free yourself. Return to the Otherworld and face the forces of darkness and,

in so doing, release the woman you love from the abyss into which your love sent her. The two women share the same soul. They lie together in that fiery pit. Release the American woman, letting her enter the light of goodness, and the English woman will then return to her physical body and live out her natural span. Go, priest! Return to God and find redemption. Walk back into the Otherworld!'

He held the amulet up higher, still waving it to and fro, and Alex, observing Father Benedict's face, knew what he would do. The priest took a deep breath, but hesitated no more, reaching out with a shaky hand, removing the amulet from Peruche's fingers, and then, hanging it carefully around his own neck, climbed to his feet. He looked up at the sky, at the forest surrounding him, and then, without saying a word, returned his gaze to Peruche. The old Indian was pointing to where Avril had disappeared, and only when the priest nodded and turned away to cross the clearing did Peruche's hand fall back to his side, the fingers outspread on flattened grass.

At that moment, Peruche died. His body shuddered and then was still. And at *that* moment, Father Benedict walked over Avril's footsteps – and a great ball of fire, an umbrella of light, exploded over the clearing.

Alex closed his eyes, blinded, and felt the heat washing over him, then heard a crackling sound as the forest trees were ignited and opened his eyes again to see the flames flickering under dense grey smoke. The heat receded almost immediately, but seemed to suck the air up with it, and Alex gasped and coughed as smoke swirled around him and then mercifully passed on.

Antonio was lying beside Peruche, his hands cupped over his eyes, his body shuddering as the ground beneath him shook and a rumbling came from deep in the earth and exploded around them. The ground roared and split open, became a jigsaw of darting cracks out of which, as if emanating from hell, came yellow flames and foul black smoke. Alex thought he heard wailing, the anguished cry of human history, and then he stared across the clearing, through spewing flames and belching smoke, and was drawn forward, out of his physical self, to where the past met the future.

The forest melted away, the earth turned to molten lava, the sun, black as ash, hovered beside a crimson moon, while hail and fire rained from multiple skies as they rolled back like carpets. Beyond the skies was the cosmos, filled with stars and colliding planets, the debris from galactic explosions forming tunnels through time. He descended – and rose again – and was flung into the

light, and saw himself through all the ages of his life, returning after his dying.

He was young and then old, and then himself as he was now, and stood silently staring straight at the sun as it blazed down upon him. His dark-haired mother held him close, dressed in white, just like the sun, and then she vanished with a leisurely wave of her hand and left him in tall grass. He snapped off some grass and heard it cry out in pain, felt it squirming in his tightening fist, deliberately dropped it into the várzea lake and watched the fish swarm around it. The water rippled across his face, erasing the features of his reflection, and he reached down, touching his own reflected fingers, and felt the water surrounding him. It was deep and very dark, filled with life, without end, and a pale moon, its soothing light wavering, illuminated the cosmos. There were stars all around him, both above and below him, and he saw the forces of darkness and light sweeping through one another.

Father Benedict was in that maelstrom, being swept through eternity, first crushed and then stretched out between the forces of good and evil, his spirit spreading over the great void between heaven and hell. Above were cherubim with flaming swords, below were demons and ogres; thunder clapped and lightning flashed and fire flowed in winding rivers in which, their cries fearsome yet tongueless, the damned suffered endlessly.

Father Benedict rode the whirlwind, his body shredded and then devoured, his spirit reaching down in love and faith to pull Laura to safety. She was sleeping, unaware, existing neither here nor there, her long red hair sweeping out to disappear into the darkness, her body a pale flesh that flowed like a river, her eyes closed to the sky above and the mud below, to the light and the black pit.

She was there, as was Avril, both borrowing the same form, and the abyss, spiralling eternally beneath her, began sucking her down. Father Benedict had to face it – had to stare hell in the face, had to look into the eyes of Satan and see only God’s reflection, had to brave indescribable horrors and vileness in order to redeem his lost faith – and he did so, destroying his mortality, finding redemption in death, and then picked Laura up with his love and faith and carried her into the light.

Hell roared in its fury, hail and fire swept through the void, while the angels, resplendent in the light above, sang the songs of redemption. Alex came back, returning, observing the fading of the Otherworld, his heart bursting

with love, his spirit soaring, when silence reigned over chaos. Father Benedict had gone forever into that silence, his soul at last finding peace. The sun died to a cinder, the moon melted to dripping blood, the blood flowed across the floor and splashed on antique furniture, then congealed on the walls of that awful room in which his father had died. He saw them before that dying, since they all defied time and space: his father and Rollie Thatcher, Laura Wellman and Father Benedict, Mengrire shedding tears for his Indian girl before the blood stained their hands. They had lived – and still had life – and would never relinquish it, existing here, in Alex's mind, where time and space had no meaning, as he flew through his own pain, borne on the wings of his love, and descended back to the rainforest, to the reality of the material world… and saw the flames in the forest clearing becoming smaller and dying out, the smoke drifting like gauze and then gradually disappearing, and then heard the diurnal silence filling his ears with the song of the sheltered heart.

Chapter Thirteen

Alex opened his stinging eyes, shook his head, trying to clear it, then saw Antonio sitting up, also shaking his head, Peruche's dead body stretched out beside him, its weathered skin like ancient parchment. Avril lay not far away, face down on the flattened grass, her forehead resting on her crossed hands, the breeze rippling her white clothes.

She lay there without moving, the breeze making her dark hair dance, her spine rising and falling as she breathed slowly, evenly. Then her left foot kicked, her head shook, her hands parted, and she moaned softly and rolled onto her back and stared up at the sky.

Thus she lay in a drifting mist on the forest floor, sunlight touching her waking eyes.
'She's all right,' Antonio said. 'She's fine. I think she just needs a drink.' He turned his head to grin at Alex, then withdrew a familiar hip flask from his pocket, swung it to and fro in a teasing manner and grinned even more broadly. 'Here,' he said. 'I got it from Father Benedict – and he left enough for the two of you.' He threw the hip flask to Alex, expertly landing it in his

lap, then stood up, glanced at the exhausted Avril and then stretched himself. Alex sat against the tree, feeling the pain in his broken leg, his spirit soaring on the wings of his love as his faith was renewed. He stretched one arm and spread his fingers, watched the grass rise up to touch him, turned his head and poured his love at a flower and watched its petals unfold for him. He made the trees bend, made the branches shed their leaves, and only then, when the golden pollen was raining on Avril, did he lean back and smile. The sun hovered above the forest canopy and he called its light to him.

'I'll have to leave you for a while,' Antonio said. 'You can't travel with that broken leg. I promise to bring back some stretcher-bearers and all the comforts of home. You can survive here for a day or two: boil the water and peel the fruit. Father Benedict's gone, he won't be coming back, but at least you have Avril again… and that's more than enough.'

Looking across the clearing, Alex saw Avril crawling on hands and knees towards him, shaking her head to clear it, her lips tight and determined. The high grass bent before her, bowed respectfully as she passed, and as she kept inching forward, coming closer, occasionally rubbing dirt from her face, she seemed to take energy from the dawn light, her cheeks gaining a warm glow. She kept advancing until she reached him – the forest soaring high behind her, the dark clouds threatening rain, the lianas strangling the trees and themselves surrendering to dense foliage – and then she stopped, propping herself up on her elbows, and stared at him with puzzled eyes.

'What happened?' she asked him. 'I saw light… and then I must have passed out.'

'I'll tell you later,' Alex replied. 'We've got plenty of time.'

Avril crept into his arms and laid her head on his chest, and he sat there, stroking her dark hair, the tree rough against his spine, watching the white-andyellow flowers fall all around him to carpet the forest floor. Antonio picked up his rucksack, slipped the straps over his shoulders, and then, sniffing the fresh air, his *café-au-lait* face beaming, he put his right hand out, let it fill up with the falling flowers, then ceremoniously poured the flowers over Alex and Avril, offering nature's confetti.

'Peace be with you,' he said. 'I now go for the stretcher-bearers. You know? Those *ordinary* people – the ones just like us – those poor mortals who live only to die, defying their terror with love… those who measure God's justice.'

And with that, he grinned at them and turned away and walked back into the forest.

THE END Other ebooks in the ‘Otherworld’ series

Book One: *The Mission*
Book Two: *The Plantation*
Book Three: *The River* Acknowledgements

My thanks to the following people for their kind assistance during the writing of this book: Stephen Cobb, winner of the Anglo-Brazilian Society Award, 1980, for his general advice regarding travel through Brazil. J. B. Williams and C. A. Parrott of Journey Latin America for so quickly and efficiently arranging my trip to Brazil and the Amazon. Peter Kurtz and my British agents, Richard and Iris Gollner, for useful info and introductions. In Brazil: Jim and Elda Mulholland, Mike and Vanika Royster, Walter and, of course, Karin and Alexandria Zuhlsdorff, two beautiful ladies.

For general editorial assistance and moral support, my sincere thanks to Alan Earney, Sandi Gellis-Cole, Al Zuckerman and, again, Richard and Iris Gollner. Thanks, also, to Shaun and Tanya, my son and daughter, who, at twelve and nine years old respectively, printed this book out on my wordprocessor as I was correcting it. Finally, as representatives of two indispensable but rarely acknowledged aids to a writer’s career: John Munday, art director of Corgi Books, for more than once taking the time to share beers and chat about the pros and cons of book covers – one of this particular author’s pet subjects – and Naren Patel, my good friend and accountant, without whose expert guidance I would not have survived so many years in this precarious business.

The Lodestone

It is said that whoever holds the Lodestone will own the entire world…

It was originally the apex of the Great Pyramid of Egypt. Its function was to create fusion between Earth and the Cosmos. It holds the key to the infinite mysteries of the

universe. And it has been missing for centuries…
Wilhelm Zweig, ageing master-criminal, is determined to find it – and with it the key to immortality.

But in his way stands the legendary Count de Saint Germain, history's most mysterious figure, believed to be the protector of the magical stone. And against him is Gerry Remick, a young American with a passion for unexplained phenomena – and for Zweig's unhappy daughter, Ingrid.

Together, and relentlessly pursued by the evil Zweig, Gerry and Ingrid embark upon a dangerous quest for the
Lodestone, an epic journey that takes them through Europe and the Orient, past the sites of the Seven Wonders of the World, and on to a final magical confrontation on the summit of the Earth…

The Lodestone

Book One The Pure at Heart

Prologue

Escaping the February freeze of Park Avenue, New York, and entering the brightly-lit, warm splendour of the Waldorf Astoria hotel, the man travelling under the name of Christian Grabbe, which was but one of his many pseudonyms, felt instantly at home – and certainly looked it. Wearing an immaculately tailored Savile Row grey suit, with a Harvie & Hudson striped shirt and matching tie, and hand-made shoes from John Lobb of St Jame's Street, London, the man was slim, elegant and powerfully attractive in a very odd way.

Standing momentarily beneath a glittering chandelier and glancing quickly around the great lobby with his wintry-grey, almost silvery eyes, he was not unaware of the fact that more than one of the ladies seated beside the high pillars and under the potted plants had, while subconsciously adjusting their Arnold Scaasi evening dresses and Tiffany jewellery, turned their heads to stare at him with a combination of instinctive fear and helpless longing.

He stared back at some of them, offering a dangerously seductive smile, which, combined with his oddly mesmeric gaze, caused most of the ladies to breathe far too deeply, before blushing and demurely lowering their eyes.

Having thus amused himself, and seeing no potential threat in the Waldorf's busy lobby, the pseudonymous Mr Grabbe checked his Rolex wristwatch, noted that he was on time for his appointment, then purposefully crossed the lobby and took the elevator up, his presence in that enclosed space making the other passengers uneasy, some actually heaving a sigh of relief, without quite knowing why, when he stepped out at the twenty-seventh floor.

He checked the corridor, automatically, quickly, missing nothing, then walked to the door that had the number he had been given over the telephone.

His silvery-grey eyes were calm, his stance languid, as he rang the bell.

The man who opened the door (promptly, as Grabbe noted with satisfaction) was tall, broad, obviously not too bright, and wearing a black-leather jacket, fawn trousers, chequered shirt with no tie, and rather tasteless brownsuede shoes. He had a pugilist's scarred features, cold green eyes and tips too thin to form a proper smile.

'Grabbe?'

'Yes.'

'Come in,' the man said.

Grabbe stepped inside, heard the door close behind him, then saw two other men at the far side of the suite, near the window overlooking Park Avenue, framing the skyline of Manhattan, beside a table upon which rested a small silver box which, Grabbe assumed, contained a hypodermic, some needles and a goodly dose of the truth serum, Pentothal.

Grabbe glanced back over his shoulder. The big dummy who had let him in was resting with his back against the closed door, his right hand in a pocket which, by the look of it, contained some kind of pistol. Grabbe smiled and turned back to the front.

'I'm Grabbe,' he announced.

One of the men was a fairly precise replica of the muscle-bound Neanderthal who had let Mr Grabbe into the suite – but this one with curling golden locks instead of the auburn head-stubble of the heavily breathing ape now guarding the door – and the other was a male creature as wide as he was tall, which was not very tall at all, with his potbelly bursting his waistcoat and threatening to burst his pinstripe suit, and with thyroid eyes blinking repeatedly behind rimless spectacles which, as he repeatedly wiped sweat from his pale face with a handkerchief, kept slipping down his stubby nose.

'So,' the little man said, as if talking through his nostrils, 'you came.'

'Obviously,' Grabbe responded testily. 'You called, did you not?'

The little fat man blinked behind his rimless spectacles, wiped more sweat from his face with his already damp handkerchief, glanced once across the skyline in the direction of the Hudson River, then coughed into his free hand and managed to get his words out.

'So,' he said, 'you have brought the Tuaoi Stone with you?'

'Perhaps,' Grabbe replied. 'Perhaps not. Do you wish to forcibly search me?'

The Neanderthal man quivered, opening and closing his brutish fists, but the little fat man simply wiped his face again and took another deep breath.

‘Please,’ he said. ‘I cannot go back without it. And you *did* say you had it.’
‘I was informed that you were looking for it,’ Grabbe said. ‘That is why I am here.’
‘You sound German,’ the little man said.
‘So do you, Mr Kleist. And the man who sent you here, that mysterious billionaire, is, I believe, also German.’
Clearly startled by that statement, Mr Kleist wiped more sweat from his pale face. ‘How did you – ?’
‘One of the world’s most mysterious and richest men,’ Grabbe interjected, smiling icily. ‘But known to you and I as Wilhelm Zweig… And he wants the Tuaoi Stone. Doubtless for no other reason than to add it to his collection of other rare artifacts stolen from far and wide.’
The very small Mr Kleist, appearing to grown even smaller, licked his lips and croaked fearfully, ‘You should not know – ’
‘I do.’
‘How?’
‘That is not your concern. Just take it that I know how badly he wants the Tuaoi Stone – and that I’ve heard he’ll do anything to get it.’
‘Yes,’ Mr Kleist said, practically stuttering, studying his soaked handkerchief and then, perhaps disgusted by his own nervous sweating, returning his gaze to the disturbingly attractive Mr Grabbe.
‘So,’ he said. ‘You know how badly my superior wants it. And so… Do you *have* it?’
‘You will *pay* anything – or *do* anything – to obtain it?’
‘Yes,’ the roly-poly, sweating Mr Kleist said. ‘Anything. *I cannot go back without it*!’
‘In that case,’ Grabbe said, smiling chillingly, ‘I can give you nothing… Nothing but this.’
So saying he raised his right hand and spread his fingers in the air just as the heavyweight behind him jerked a pistol from his pocket, the other thug moved towards him, and the little man with the sweating face and stutter reached for the silver box on the table.
Ignoring the latter pair, Grabbe turned to the man behind him, his hand still upraised, then closed his eyes and quivered visibly, as if jolted by a burst of electricity.
Even as the heavyweight by the door was raising his pistol to take aim at

Grabbe, a hot bright light filled the room – so bright it was almost blinding – and the man with the pistol cried out in panic, let his weapon fall to the floor, then was picked up and slammed backwards into the door, as if hurled there by an invisible assailant.
He bounced off the door and was falling to the floor as the plaster exploded from the wall around him to fill the air with billowing clouds of dust.
'What?' Kleist shrieked. '*What*…?'
Jagged cracks were shooting out in all directions from the exploding plaster of the wall above the unconscious man as Grabbe, hearing Kleist's quavering, fearful words, turned back to face him, his brilliant gaze terrifying.
'*Mein Gott*!' Klein shrieked. '*Kill him*!'
Yet even as the panic-stricken little man was giving this command, the walls cracked and spat plaster, lightbulbs burst and ornaments exploded, then the windows were blown inward by a sudden, fierce wind that immediately filled the suite with flying shards of glass and a hurricane's howling.
Grabbe was still standing in the middle of that maelstrom, his body silhouetted by the rapidly fading light, the debris from the exploding walls whirling around him, while Kleist and the thug beside him, both slashed by flying glass, bled profusely and screamed in pain, doubling over for protection, then were picked up, hurled against the wall, and fell convulsing to the floor.
At that moment, the wall around the shattered window exploded, as if blown apart by a hand grenade, and the roaring wind rushed back out, sucking Kleist and his thug through the large, jagged hole, to fall screaming to the sidewalk of Park Avenue, twenty-seven floors below.
A few minutes later, when the manager of the hotel and some assistants burst into the room, they found nothing but one dead hoodlum in the drifting dust and debris of complete, inexplicable devastation.
They didn't find Christian Grabbe.

Chapter One

In his large, untidy bedroom, the walls of which were plastered with photographs of UFOs, ghosts, poltergeist occurrences and other paranormal phenomena, Gerry Remick was completing the packing of the large holdall resting on a bed littered with computer diskettes, cassette tapes, CDs of

classical and rock music, and a daunting pile of heavy hardcover books, most of which he had wanted to take with him for light reading but simply couldn't fit into the suitcase.

The true squalor of the room could not be seen since the curtains had been pulled across and the lights dimmed to enable Gerry to watch more clearly, as he packed, the TV screen's blurred image of a large gaping hole on the twenty-seventh-floor wall of the Waldorf Astoria hotel on Park Avenue, while a voice-over explained that a very bad explosion, the causes of which were unknown, had devastated a suite on that floor, killing the three male residents, one of whom had died in the actual explosion, the other two being blown out of the suite and crashing to their deaths on the sidewalk far below. 'Oh, boy!' Gerry exclaimed.
When the grainy image of the large jagged hole in the

wall of the great hotel had faded from the screen and the newscaster had reappeared to explain that so far there was no 'logical explanation' for the explosion, Gerry switched off the TV and spent a few minutes tormenting himself with the realization that he would simply have to leave behind most of his heavyweight tomes and settle for his paperback editions of *In Search of Schrodinger's Cat: Quantum Physics and Reality*, Koestler's *The Ghost in the Machine*, Fodor's *Egypt*, and Charles Fort's *The Book of the Damned*.

Feeling intellectually deprived, he closed the almost bursting holdall, lifted it off the bed with some difficulty, then opened the door of his room, took a deep breath and stepped out.

What he stepped into was the stunning main living room of his wealthy mother's luxurious suite in an exclusive apartment block on Central Park West, the panoramic windows overlooking the frozen lake in the park and the buildings of the East Side. The leaden sky's dim light was falling obliquely on the suite's magnolia-painted walls and extensive collection of rare paintings, and his mother was sitting in her favourite French Louis XV armchair, dressed in a sublimely understated Zoran pyjamapants outfit in mottled grey, matching cashmere sweater and stylish evening slippers. She had a small glass of dry sherry on the Chippendale table by her side and was

reading *The Collected Poems of Robert Frost*, from which she was only distracted when Gerry dropped his heavy holdall on the carpeted floor and lowered his shoulder-bag.

'Did you see it?' he asked, and then, before waiting for a reply: 'No, you didn't. You were reading that book.'

That made her look up, thin face framed by pinned-up silvery hair, pencilled eyebrows lifting sardonically over a steady hazel gaze.

'If *you* read books like this,' she said, 'instead of your awful rubbish, you might cease your adolescent behaviour and become a mature man.'

'Mature men are bores,' he responded. 'They don't see the real world.'
'Oh, God,' his mother said, 'not *that* again! Not that ridiculous Charles Fort theme.'
Gerry wasn't about to fall for that old turkey, having heard it too often. Charles Fort was the eccentric author of one of the books he had just packed – *The Book of the Damned* – a notorious work on bizarre phenomena for which there is no logical explanation. And while it was true that Gerry had a fondness for Fort's work, he was in fact more interested in the serious study of UFOs, the paranormal, the occult and, especially, the realities behind the myths of antiquity.
'I'm *not* a Charles Fort freak,' he insisted to his mother, feeling that he was wasting his breath but compelled to try anyway. 'He's merely one of my many interests. I'm into unexplained phenomena in general, and that includes the occult and antiquities – which is why, as you damned well know, I'm going to Egypt.'
His mother offered a familiar sigh of histrionic despair. 'At least you managed to carry on your father's interest in antiquities, even if distorting, with your infantile reasoning, everything you were taught.'
That one was below the belt. Gerry's father, Martin Sydney Remick, had been the Professor of Archaeological Studies in the Antiquities Department of Harvard University; and Gerry, while not following in his footsteps, had certainly not distorted his teachings. He *had* sidetracked a little, but not all that much, and he knew that his father, a good-humoured man, would not

really have minded.
‘Just because I was thrown out of – ’
‘You were such a nice boy, once. So clean and welldressed. I thought I would have a priest for a son, and then… I can’t speak of it.’
She shuddered melodramatically, making it clear that what she could not discuss (but would) was the fact that since his father’s death two years ago – a death that had shocked and hurt him much more than he would admit – Gerry had changed from a shy kid with an obsessive interest in religious matters into a rebellious bright spark who had been expelled from his father’s famed university for outrageous behaviour.
Clearly his mother had hoped that the dramatic change in him would pass away with time, but unfortunately such had not been the case. Formerly an intense young academic, he had become, instead, an oddball – odd at least in the sight of his mother, who even now was looking him up and down as if valuing merchandise.
‘Can’t you at least wear a suit,’ she asked laconically, ‘instead of those awful denims?’
‘I *like* denims,’ he replied, aware that he was shuffling his feet on the carpet like a nervous schoolboy. ‘And besides, I’m not flying first class. I want to meet the *real* people.’
‘The riffraff, you mean. Like that trash you meet in SoHo. Living in overpriced lofts and admiring themselves. I don’t know how you manage it.’
In fact, he didn’t associate with the upwardly mobile in SoHo, but with the much more colourful denizens of Times Square and 42nd Street, having decided, with the death of his father, that wealth meant nothing to him.
While he was honest enough to accept that he had justifiably been dismissed from Harvard for what they had accurately described as ‘habitual drunkenness, the possession of marijuana, and general behavioural patterns unacceptable to this fraternity’, he was not about to forget that he was still pretty bright and not prepared to take crap from anyone.
‘You once showed such promise,’ his mother said with ostentatious weariness, as, picking up her glass of sherry, she stared balefully at him. ‘*Now* look at the state of you. Your father would turn in his grave if he could see what’s become of you.’
Standing beside his suitcase, wondering how he could best take his leave, he

automatically gazed down at his own tatty denims and loafers, trying to work out what made them so offensive. However, even as he was doing this, he realized that what his mother was talking about was *not* his physical appearance, but the manner in which his education was, in her opinion, being squandered.

'Mom,' he said, trying to sound determined, 'I've got to go now.'

'Of course, dear,' she responded. 'If you must, you must. I just wish you were going to research the pyramids properly, rather than engaging in this unsavoury pursuit of nonsensical theories.' She sighed again, sipped her sherry, placed the glass back on the table. 'Why can't you decide on a career and put your education to some good use? I simply can't bear to see you go such a long way in pursuit of these ghosts of yours.'

'I'm *not* pursuing ghosts, Mom. I'm simply studying the more mysterious aspects of the Great Pyramid of Giza. It's reported to possess certain magical properties, and I want to find out for myself if that's true or not.'

'I say no more,' his mother said, always keen to have her say. 'Every man to his hobby. I just wish you would concentrate for once on what to do with your future. I mean, what's all this *for*?'

'You want me to get married and settle down,' he offered by way of a reply.

'Well, you *could* do with settling down a *little*.'

'I won't surrender my individuality to a bourgeois living death.'

'Don't you like it here, dear?'

'I'm still here, aren't I, Mom?'

'I *do* wish you would call me *Mother*,' she replied. 'I don't go well with apple pie.'

'Anyway,' he said stubbornly, 'before I leave, I just want you to know that while you were reading that obsolete poetry, the news on TV was revealing that an inexplicable explosion – repeat: *inexplicable* – blew out the front wall of one of the suites in the Waldorf Astoria hotel *and* two of the three people sharing the suite. Those two fell to their deaths, many floors below. *Splat*! On the sidewalk.'

'And the third one?' his mother asked in her practical manner.

He snapped his fingers at her. 'Also killed,' he said. 'They found him practically buried in the rubble of the room, which looked, as one observer put it, as if it had been torn apart by a tornado.'

'How unpleasant,' his mother said. 'But what's the point of this story?'

Gerry sighed with exasperation. ‘The point, *Mother*, is that the explosion wasn’t caused by a gas leak, by electrical malfunction, or by any kind of bomb or incendiary. In other words, the explosion was completely inexplicable – and, even more mysteriously, it didn’t affect either of the adjoining rooms. So, whatever it was that wrecked that room, it wasn’t anything known to rational science.’
‘I’m *sure* there’s a rational explanation for it, dear. Almost certainly a gas leak. You know how antiquated the plumbing and wiring in some of these old hotels are – and how reluctant the management would be to admit liability. The truth will be revealed in due course, I’m certain, and my bet is a gas leak.’
‘An explosion caused by a gas leak or electrical fault would *at least* have affected the adjoining rooms – and probably lots more. No, *Mother*, you can’t wriggle out of this one: that explosion was as unnatural as anything to be found in the works of Charles Fort. I only wish I could stay to investigate it, but I’ve got to be going now.’
‘I think that’s best, dear. The air of Egypt should do you good. It might even clear your head of all this nonsense, which *would* be a blessing. So, come and give me a goodbye kiss.’
Rolling his eyes, Gerry crossed the room, leaned over and kissed her on the cheek. ‘OK,’ he said, straightening up, ‘I’ll see you in four weeks or so. Look after yourself.’
‘*You* look after yourself. Watch out for thieves and beggars. And *do* be careful of involvement with those foreign ladies. I believe they’re not really – ’
‘Yes, Mom, I hear you.’
‘And you have your passport and credit cards?’
‘Yes, Mom.’
‘And you’re certain you’ve packed everything you need?’
He sighed again, loving her, wanting to strangle her.
‘Yes, *Mother*,’ he said.
‘Well, you *know* what you’re like,’ she said. ‘All brains and no commonsense, hopeless at human relationships and life’s little chores, such as dressing decently, conversing pleasantly, looking after your money and packing a holdall. You don’t belong in the real world.’
‘I’m not as inexperienced as you think,’ he insisted. ‘I can look after myself.’

‘Oh, yes,’ she said. ‘*Naturally*.’
At that moment, the doorbell rang, and when Gerry raised his eyebrows enquiringly, his mother stood up and said, ‘Well, *naturally*, darling, I arranged for the porter to carry your holdall down to the lobby.’
‘Mom, it’s only one holdall!’
‘That’s what porters are for, dear. And what’s he going to think if he sees my son carrying his own luggage? So don’t be silly. Let him take your suitcase down and find you a cab.’
‘God, Mom, you’re such a *snob*!’
‘We all have our place in life, dear, and you have yet to find yours.’
Shaking his head from side to side in disgust, and wanting even more to get out of this bourgeois mausoleum, he just stood there, brimming over with frustration, while his mother walked regally to the door of the apartment, opened it, and pointed silently at the holdall on the carpet. The porter nodded and stepped in, grinning as usual. He picked up the holdall and said, ‘On your way at last, are you, sir? You must be pretty excited.’
This sly reference to the fact that he had never before left the United States did not amuse Gerry, who simply glared at his mother while the porter picked up the holdall and walked out of the room. Gerry was about to follow him, but reluctantly turned back to his mother and let her kiss him on the cheek.
‘I can *really* look after myself – ’ he began to say, but was cut off in mid-sentence when his mother, smiling brightly, interjected with: ‘I know, dear, but certain standards must be maintained. Now have a good time, send me a postcard, and I’ll see you in four weeks or so.’ Then, still smiling brightly, she closed the door in his face.
‘The elevator’s here, sir,’ the porter said, sounding faintly amused.
Gerry took a deep breath, glanced along the corridor, then let his breath out in a lengthy sigh and walked up to the porter where he stood by the open door of the elevator. Ignoring him, Gerry stepped into the elevator, turned back to the front, and tried to keep his face expressionless as the porter carried his suitcase in, then pressed the button to close the door and let them descend.
‘So,’ the porter said, glancing sideways and grinning, ‘your mom tells me you’re off to Egypt to see the pyramids. That’s some trip to be making.’
‘My mother talks too much,’ Gerry responded as frigidly as he could manage, ‘but, yes, that’s where I’m going – for research, of course.’
‘Some research,’ the porter said, winking lewdly. ‘I bet those Egyptian

broads sure know how to shake it – and you'll be researching *them*, right?'
Gerry felt like shoving the porter's head through the meshed metal bars of the elevator and then shutting the door on it, but contented himself with the thought that the creep was a traitor to his own class, the working class, and should, instead of wearing that pansy uniform and tipping his cap to rich people, be out in the streets, encouraging the overthrow of capitalism by robbing banks and mugging Fifth Avenue shoppers.
Relieving his tension with this radical thought, he was even more relieved when the elevator glided to a stop, the door opened, and he was able to follow the porter into the lobby of the ground floor, then through the swinging doors, onto the sidewalk of Central Park West where the porter, after considerable effort, managed to wave down a cab.
'Well, sir,' he said, opening the rear door of the cab for Gerry, 'have the time of your life.'
'I will, thank you very much.'
Suddenly ashamed of the way in which, when angry, he would quickly adopt his mother's Anglified, glacial, superior manner of speaking, he took a few coins from his jacket pocket and pressed them into the porter's greasy palm. Then, before the bastard could count them and sneer, he slid into the cab, slammed the door and told the driver to take off.
Settling back into the seat, sighing with pleasure at the thought of what was to come, and contemplating the possibility of asking the driver to stop by the Waldorf Astoria to enable him to check the latest info on what had occurred there, he remembered that the coins he had pressed into the porter's hand had in fact been the last of his loose change. Immediately, without thinking, he leaned forward in his seat, tapped the window separating himself from the driver, and said, 'Hey, Mac, do you take the American Express Gold Card?'
Instantly, there was a squealing of brakes and the cab jerked to an abrupt halt, throwing Gerry forward as the driver's face, monolithic and unsmiling, turned menacingly in his direction.
Gerry immediately offered his most charming grin and spread his hands in a mock gesture of defence.
'OK, pal,' he said, 'just a joke! Now take me to Kennedy.'
The cab driver stared at him, lips pursed, eyes like stones, then took a deep breath, sort of *rolled* his broad shoulders, then turned back to the front, accelerated and raced along Central Park West, while Gerry, instead of

thinking about the great adventure to come, wondered if the brute would accept his wristwatch in lieu of dollars and cents.

Chapter Two

As she did much too often, Ingrid dreamt about brutal sex, about the violation of the female body, saw her father with his many women leering at her as he pawed them openly, then felt a great weight falling upon her as his mocking laughter rang in her ears. She became a child again, retreating into warmer memories, seeing her mother's glowing smile, then her tears, then her face in a coffin. Ingrid wept and was reprimanded, was beaten black and blue by her father, then turned back into a woman and was still being beaten and heard her own screams from far away, as if coming from someone else. She screamed again and then stopped, sobbed instead, started groaning, then dropped down through her pain into a well of despair – and was whimpering when she opened her eyes and escaped from the dream…

The morning light filled her room, beaming in through the window, falling obliquely on pine wardrobes, the grey carpet on varnished floorboards, the romantic novels piled on the low cupboard beside the bed, reflected off the mirror on the dressing table facing the window, back onto the crumpled white sheet over her body, where she lay gazing upward. She was thinking of her dream, one of many similar dreams, and silently saying her thanks that she hadn't cried out loud enough to be heard.

It was morning. Late morning. She had overslept on her last day here. Yawning, she sat upright, rubbed her eyes and blinked, then stared through the window at the placid, transparent, deep blue surface of Lake Geneva, with the majestic snow-capped mountains to the south, the lush vineyards and pastures to the north, all under a whiteclouded azure sky, turning silvery with sunlight.

She was tempted to make her way down to the shore of the lake, then board a boat and sail away, but she knew that her father's helicopter would come for her this morning, and that such an escape was therefore impossible. The thought of seeing him frightened her, but this sanatorium was worse, so she

gritted her perfect teeth, shook her head from side to side, and then slid out of the bed.

Still shaken by the knowledge that her screaming, if heard, could have led to her being incarcerated here again, she hurriedly disrobed and stepped into the shower, letting the icy water slap her fully awake. Refreshed, she stepped out, dried herself, then went to the mirror.

There were no bruises on her body, which was slim and well formed, but the young woman staring at her was the one she had seen in her dream, being ravished and punished.

In her worst dreams, she always was.
Hearing her own forlorn sigh like a breeze from far away, she sat at the dressing table and examined her still naked body, not pleased with what she saw. She had been in this particular sanatorium for six months, and every time she looked in the mirror she was shocked by the sight of herself.
She was hazel-eyed, auburn-haired and quite pretty, but irremediably marred by melancholy and fear.
Closing her eyes, she recalled her latest nightmare, chilled by her understanding of what it meant, but not able to cure herself.
She thought of her rich and powerful father, a bull of a man at sixty-two, and burned with shame at recalling his behaviour with his various women. Ever since she could remember, he had used those women to taunt her, deliberately pawing them and talking obscenely in her presence to shame and humiliate her. He had done it out of contempt for the memory of her mother, and in doing so had succeeded in breaking her like a twig in his huge hands.
Now, at twenty-seven, still a virgin and extremely timid, after five years of being in and out of various sanatoriums, she knew exactly what she had become… a woman defeated.
The nightmares, she knew, represented her fear of sex, as well as releasing the revulsion she felt for her father, since what she *suspected* he had done to her mother was worse, infinitely worse, than his crimes against her.
Opening her eyes again, she saw herself, a pale ghost in the mirror. She wanted to escape, to flee from this awful place *and* her father, but knew it was too late for that now, that she hadn’t the will.

She was trapped by her fear of him.
Shivering, she proceeded to dress herself, then applied the minimum of make-up to her pale, frightened face. When she had done this, she carefully piled her long auburn hair on her head, pinned it into place, put on her flat-heeled shoes, then glanced distractedly around her.
Apart from her many romantic novels, which she was leaving for the next patient, she had cleaned the room out completely in preparation for her departure, and her suitcase, packed tight but still open, was resting on the low wooden rack. Satisfied that she had done everything necessary, she removed the last of her things from the dressing table, divided them between a small zip bag and her leather shoulder-bag, placed the zip bag in the suitcase, locked it, and then left the room.
This Swiss sanatorium was for wealthy patients only, and this particular wing, with private rooms and relative freedom, was for those who were deemed to be on the mend and ready to leave. The rooms were comfortable, the corridors bright, the floors covered in fine carpeting, and as she walked in the direction of the manager's office, she glanced out through the panoramic, metal-framed windows and saw the boats cruising on a shimmering Lake Geneva, minute in the vast expanse of mountain and vineyard and pasture. The very beauty of the place was a mockery to her sense of oppression.
Arriving at the closed door of the office of Madame Boullard, and thinking ruefully of how only a sanatorium for the very rich could blandly call its supervisor a 'manager' (as if this clinic for the mentally disturbed was actually a hotel), she pressed the bell beside the door and then heard a female voice telling her to enter. She did so, closing the door behind her and crossing the broad expanse of luxurious carpet to where Madame Boullard was sitting behind her large desk, the panoramic window behind her again framing the lake and mountains, as well as overlooking the expansive lawns and, farther back, the helipad where the richest of the very rich patients were usually brought in by private helicopter, well away from the public gaze.
Indeed, even as Ingrid stopped in front of the desk and glanced past the stern face of Madame Boullard at the green lawns and blue lake, she saw the sun reflecting off a helicopter which, though still in the distance, was obviously heading for the sanatorium to take her on the first leg of her journey back to her father – the thought of which merely deepened her fear and foreboding.
'*Bonjour*, Madame Boullard,' she said, turning her attention to the heavy-set,

neatly dressed, grey-haired Frenchwoman who, with fat hands folded on the desk, was staring up sternly.
‘*Bonjour*, Fräulein Zweig. I trust you slept well last night and are prepared for your journey?’
‘*Oui, Madame*. I feel fine.’
Madame Boullard did not invite her to sit, but merely unfolded her fat hands, leaned back in her chair, and stared at her with a well-furrowed brow and pursed, disapproving lips.
‘So,’ she said, ‘the time has come for your departure. I hope I am not making a mistake in recommending your release.’
‘*Non, Madame*, you are not.’
‘You have been here for six months. Your behaviour has not been excellent. Nonetheless, with proper treatment and God’s help, you have shown a little improvement.’
‘*Oui, Madame*. *Merci*.’
She felt awful saying it, despising her own cowardice, hating and fearing this woman as much as she did her father, recalling the humiliations and punishments that the bitch had put her through, taking pleasure from the agony she bestowed in the name of a cure. In fact, when Ingrid looked directly at Madame Boullard’s humourless face, she almost choked with nausea.
‘Your father is a wealthy and powerful man,’ Madame Boullard said, ‘and expects to get what he has paid for – which, in your case, I believe he has. When you first came here, you were sick, a kleptomaniac, always weeping. The kleptomania was your immature plea for attention, the constant weeping a manifestation of your refusal to accept the adult world. I believe you now know better. You have accepted reality. The anger and fear that motivated you, the frequent nightmares you suffered, were all caused by resentment of the very privileges that your father could give you. That anger and fear have been removed, thus dispelling your nightmares and, in learning to respect your father, you have hopefully also learned to respect yourself. I hope you are grateful, Fräulein Zweig – ’
‘*Oui*.’
‘ – and will not disappoint your father or myself by abusing your freedom.’
‘*Non, Madame*. I will not.’
Aware of how close she had come to giving away the fact that her nightmares

were still tormenting her, but pleased that she had been able to hide that truth for so long, Ingrid glanced out the window, watched the helicopter approaching, and was only distracted from it when Madame Boullard stood up, looked back over her own shoulder, then walked around the desk.
'So,' she said, 'the helicopter has arrived. You have packed your belongings?'
'*Oui, Madame*.'
'Excellent. I will have the porter sent to your room to collect your suitcase. When he collects it, please follow him to the helipad – and leave your room unlocked.'
'*Oui, Madame* – and thank you.'
She was just about to hurry out of the office when Madame Boullard's voice, softly malicious and precise, made her stop on the spot.
'It is strange, is it not, that your father has not visited you once during the whole of your six months in this establishment?'
Ingrid bowed her head to hide her burning cheeks and humiliation.
'He is a very busy man, *Madame*.'
'Apparently so,' the old bitch replied. 'He certainly has an extraordinary reputation – controversial, in fact.'
'Controversial, *Madame*?'
'Yes. Is it not true that he has been described as one of the richest and most mysterious men in the world?'
'I wouldn't know, *Madame*. I rarely read the newspapers.'
'And that he engages in international dealings of a dubious nature, including – '
'I really couldn't say, *Madame*.'
Ingrid kept her gaze focused steadily on her own feet, feeling the rise of nervous tension, her cheeks still burning brightly. Madame Boullard was silent for some time, obviously studying her, trying to read her, then she sighed, as if weary of Ingrid's presence, and spoke softly again.
'So,' she said, 'the great man was too busy to come and visit you during all this time. He must be very busy *indeed*.'
'*Oui, Madame*.'
'Are you looking forward to seeing him?'
'*Oui, Madame*.'
'I don't think so, my dear.'

Madame Boullard sighed again, then reached out with one fat hand, pressed her fingers under Ingrid's chin and forced her head up, making Ingrid look at her. She studied Ingrid for some time, smiled in a mocking manner, then eventually removed her insulting fingers and stepped back a little.
'So,' she said. '*Au revoir*.'
'*Merci, Madame*. *Au revoir*.'
Madame Boullard responded with a glacial smile and a self-satisfied nod of her head, then held out her hand. Ingrid shook it, aware of its sweaty warmth, then let go, offered a slight curtsey, and gratefully hurried out of the hated office.
Returning to her room, she took a deep breath, glanced at the lake and mountains, then sat on the edge of the bed and waited in a trance of growing dread for the porter's arrival. He came soon enough, a familiar face, a kindly man, and when he picked up her suitcase and had walked to the door, she stopped him, pressed some francs into his hand and then pushed him away.
'Please go on ahead of me,' she said. 'I'll be there in a minute.'
'I'm supposed to escort you out, Fräulein Zweig.'
'It's alright. I won't be long.'
The porter smiled and nodded, then walked off along the corridor. Ingrid, turning back into the room, stood on tiptoe, reached up to the top of a wardrobe, and pulled down a packet of cigarettes and a box of matches.
It was forbidden to smoke in the sanatorium and for that very reason, although she didn't normally smoke, Ingrid had made it a point to do so secretly at least once or twice a week. So she lit a cigarette, threw the packet into the wicker basket at her feet, then, inhaling deeply, stepped up to the window and exhaled as she surveyed the great lake and the stunning scenery around it.
Suggesting freedom, it was her prison, incarcerating her hopes. Unable to look any longer, she removed her troubled gaze, studied the lawns of the sanatorium, focused on the helicopter that was roaring beyond the mowed grass, then exhaled another cloud of smoke and turned away from the window.
Glancing around the small, comfortable room, she thought of how she had come here six months ago, weeping hysterically, crying out for her dead mother, cursing the father who was paying for her treatment, and shredding her own clothes the first night before they rushed in to strap her down.

She had not been here before, but she had been to other sanatoriums, and each, though for the rich, wrapping human pain in luxury, had its own particular brand of horror to add to her own… Gleaming hypodermic needles; Valium washed down with water; nights spent in torment or delirium before awakening to further punishments. Nurses, male and female, some brutal, some kind, others simply indifferent in the face of the traumas of the wealthy with their strident demands… It hadn't mattered much to her – it was by now a familiar nightmare – and she knew that the torments she was enduring were all she might ever have.

So, she had suffered, and recovered, at least temporarily, and between her bad dreams about brutish men, sexual fear and humiliation, yearned in vain for that rare man of absolute goodness, who would, with his pure, platonic love, renew the faith destroyed by her father and raise her on high.

She almost laughed at this thought, knowing how foolish it was, then just as quickly had to choke back the tears at what she had lost.

Lowering her gaze, she saw the bulging wicker basket, recently filled with the torn sheets of the many love letters she had written to some imagined lover during her worst days… Six months of letters. Six months of self-delusion… She thought of the father who had driven her to that state, and of Madame Boullard who had conspired to torment her in this awful place… Six months of self-delusion and torture in this luxurious hell on earth.

Almost sweating with terror, yet unable to stop herself, she inhaled on her cigarette, exhaled a stream of smoke, then deliberately dropped the glowing cigarette into the wicker basket, waited until it was clear that the papers were catching fire, then walked casually out of the room, feeling better already.

A few minutes later, strapped into the helicopter as it ascended toward the clouds, she looked down at the sanatorium, watched it shrinking into the expanding Earth, and then saw the black smoke billowing up and streaming across the green lawns like ink staining a sheet of blotting paper.

'Jesus Christ!' exclaimed the pilot seated beside her. 'The sanatorium's on fire!'

'Really?' she heard herself replying dreamily. 'Oh, dear, how dreadful!'

Amused, she put her head back, closed her eyes and took a deep breath, then let the helicopter give her wings and fly her away on the first leg of a journey around the globe to rejoin her father.

Chapter Three

Standing on the upper deck of his 213-ft luxury cruiser, the *Landsberg II*, feeling much younger than his sixty-two years, and gazing with pleasure at his fleet of thirty smaller, high-powered boats, Zweig took deep breaths of the fresh air, stretched himself, and gazed up at the sky.

At first briefly dazzled, he soon managed to adjust to the bright light and saw his courier's helicopter in the distance, taking shape and growing large as, en route from Recife, it approached his fleet of heavily armed boats. He studied the helicopter for a moment, impatient for its arrival, then snapped his fingers at the white-jacketed Filipino steward standing at attention beside the drinks cabinet outside the salon, took a glass of bubbling Dom Perignon from the proffered tray, then imperiously waved the steward back to his position by the doorway.

'Ah,' he murmured, sipping the champagne. ' *Sehr gut*. Really excellent.'
Enjoying the drink, he gazed again with pride at the many motor launches of his private fleet, which, at anchor just outside the territorial waters of Brazil, formed a protective ring around him and were crewed by his most fanatically loyal or fearful men.
His own luxury cruiser, the pride of the fleet, contained satellite communications equipment, a swimming pool at the stern of the lower deck, just above the ramped garage for his custom-built Range Rover and personal speed boat; a helipad at the stern of the main deck; and a lavishly equipped interior with a captain's cabin, stateroom, guest cabins, two salons, including a sky lounge; gymnasium, sauna and Jacuzzi; and, scattered here, there and everywhere, many priceless paintings and antiques, most of which had been gained by dubious means.
Stretching himself, he shaded his eyes with his free hand as the helicopter, now hovering above him, whipped the wind around him before passing on to settle on the helipad with a final stuttered roaring.
Finishing his champagne, he gave the glass back to the Filipino steward, went to the brass railing, and gazed down at the helipad, where the crewmen in bright-orange coveralls were clamping the helicopter to the main deck.
The sea was a rippling blue-and-green sheet, its low waves capped with white

foam.
Zweig's personal assistant, Hans Mayer, wearing a plain grey suit with black patent-leather shoes and carrying a briefcase in one hand, climbed out, then turned back to help down a lady who, even from this distance, was clearly in her late twenties, moved self-consciously and gracelessly, had her auburn hair piled primly on top of her head, and wore thick-rimmed spectacles.
Zweig felt a twinge of disgust at the sight of his daughter, Ingrid, and watched coldly as she and Hans disappeared just below, en route up through the various levels of the boat to report directly to him.
He studied the fleet of smaller cruisers spread across the sunlit, glittering sea and thought of how far he had come from his days as a Nazi Wolfcub. First a frightened boy-fighter, then an eighteen-year-old soldier who had suffered terribly at the hands of Soviet troops during the fall of Berlin, he had learned to fight for survival after the war and had gone on to great success as a mercenary in Argentina and Paraguay, before broadening his criminal activities to take in the whole world.
Yes, he was powerful now, but it brought him little joy; he was growing old too fast, awakening each day to fearful thoughts.
He could not face the future.
Sighing, he turned around to greet Hans and Ingrid as they arrived on the deck.
Hans was blond, blue-eyed, and nervous, but at least more attractive than Ingrid. A forlorn creature, truly, completely inhibited and none too bright. He took note of her bowed head, that visible air of defeat, and wondered that even the best finishing schools had failed to give her some class.
'*Guten Tag*, Herr Zweig,' Hans said. 'I'm sorry I'm late, but – '
'No matter,' Zweig interjected brusquely. 'Please expand on your ambiguous telex. What happened in New York?'
'Hello, Father,' Ingrid began timidly. 'It's so – '
'*Ja*! *Ja*!' Zweig said impatiently, keeping his gaze focused on Hans, to whom he said, '*So*?'
Hans started telling him what had taken place in the Waldorf Astoria hotel in New York, but Zweig, feeling even more impatient, cut him short with: 'Yes, yes, I already know all that! What *else* did you find out?'
'Well,' Hans said nervously while Ingrid blushed with humiliation, 'they clearly know that the men in the Waldorf Astoria were working for you, since

someone calling himself Grabbe – *Christian* Grabbe – rang them at the hotel and asked them who they were working for. Apparently, when they refused to tell him, he just chuckled over the phone and said that he knew they were employed by someone reported to be one of the richest and most mysterious men in the world.'

'Me.'

'Yes.'

'So this man, this Christian Grabbe, made an appointment to see them, saying that *his* superior, someone unknown, was actually in possession of the Tuaoi Stone?'

'Yes, Herr Zweig. One of the three men rang me, where I was then staying in Florida, to inform me that this man, this so-called Christian Grabbe, was coming to see them at the hotel, and that they hoped to purchase the Tuaoi Stone from them. Those men died when Grabbe should have been there with them, but there was no sign of him, dead or alive, in that wrecked room. Nor was he with the other two men who died on the sidewalk of Park Avenue, having been blown out of the suite by the explosion.'

'So he never turned up,' Zweig surmised. 'Instead, he planted some kind of bomb.'

'No, Herr Zweig. No bomb was used. Nor was the explosion caused by leaking gas or electrical malfunction. That explosion has already been described as a total mystery, in the sense that no cause can be found for it. In fact, it seems that it could *not* have been a normal explosion, since the other rooms were not affected, though the devastation was certainly caused by some kind of inexplicable, powerful force.'

'We just don't know what kind.'

'Exactly, Herr Zweig.'

'Come, let's go inside.'

Deliberately ignoring Ingrid, but pleased to note her wounded look, Zweig led her and Hans through the luxurious salon, down two short flights of steps, and into a suite-sized cabin containing a surgical bed, steam bath, spa bath, and one of the cruiser's two Jacuzzis. Lying on a couch under a window with a sea-view was his secretary and mistress, Elena. Blonde-haired, blue-eyed, wearing a skin-tight *cheongsam*, she was propped up against some cushions, filing her fingernails, and occasionally moving her exposed left leg in a sensual manner.

‘My daughter has arrived from the sanatorium,’ Zweig informed her.
‘Terrific,’ Elena responded, glancing up with bored eyes. ‘Hi, kid. Nice to see you.’
As Elena automatically waved the hand that was holding the nail file, Zweig said to his daughter, ‘I’m delighted to see you, Ingrid, but please wait outside. I must discuss business before attending to you.’
Blushing, again humiliated, Ingrid backed up to the door, bumped into it, opened it and hurried out of the cabin, as if desperate for fresh air.
Glad to see the back of her, Zweig sighed.
‘Fetch the doctor,’ he said.
Hans picked up the intercom and asked for the doctor as Zweig undressed, not ashamed of his bloated nakedness, then lay face down on the surgical bed, turning his face towards his personal assistant.
‘So,’ he said, ‘what else can you tell me?’
‘Well, Herr Zweig,’ Hans replied, ‘we *do* know, from the phone call made to that suite in the Waldorf Astoria before it was destroyed, that the so-called Christian Grabbe, whether or not he was in *possession* of the Tuaoi Stone, or Lodestone, at least knew exactly what it was, since, when asked by one of our men to describe it, he did so with complete accuracy. He also knew that you wanted to purchase it – and stated that you wanted it because of its famed magical properties.’
‘And he confirmed that it actually had such properties?’
‘Over the telephone – yes. In fact, we believe that the destruction of that hotel room was a demonstration of the powers of the Tuaoi Stone – a demonstration and warning.’
‘That I’m not to pursue the matter further?’
‘I’m afraid so, Herr Zweig.’
The door to the cabin opened and Zweig’s hawk-faced, white-jacketed doctor entered, wheeling a steel trolley on which were resting numerous silver bowls filled with a variety of health foods, drinks and tablets, as well as a tray of gleaming hypodermic syringes. Adjusting his glasses, the doctor nervously commenced to aid Zweig in his daily battle against disease and old age by giving him five subcutaneous rejuvenating injections in his massive rump – the injections containing, as Zweig knew, the lyophilized cells from the different organs of unborn lambs; foetal thymus to help in fighting infection; plus liver, hypothalamus and vertebrae bone marrow cells, aimed at

improving general back tension; as well as a sixth injection of Bogomoletz serum, obtained from the tissues of the brain, placenta and heart of young car accident victims, which in turn had been injected into rabbits – a serum once used by the Soviets, as Zweig never failed to remind himself, to keep the ailing Stalin alive.

When the doctor had completed his tasks and left the cabin, Zweig drank a pint of his favourite protein drink. This consisted of two tablespoons of powdered protein, one tablespoon of granula lecithin, a banana, raw egg and two cups of skimmed milk, all whipped together in a blender for thirty seconds. Also, while still talking to Hans, he had a selection of the exotic health snacks in the silver bowls, including fertilized chicken eggs from the Bahamas, fertilized turtle eggs from the South Pacific, walnuts and honey from the Caucasus regions of Russia, dried apricots from the remote village of Hunza in the Himalayas, guavas, mangoes, loquats, and the white root, Yuka, from Vilcabamba, Ecuador's so-called Valley of Eternal Youth, and, finally, the root of Eleutheron Ginseng, from the desolate mountain villages of Siberia.

'Who *are* these people?' he asked between mouthfuls. 'That's what we must find out. They knew I wanted the Lodestone and they got in touch with me by phone, then they managed to kill my men in that hotel room in New York – and they did it in some inexplicable, possibly magical, manner. So who *are* they?'

'There *is* one clue,' Hans said. 'One of our men in New York, before his untimely death, informed me that prior to the arrangement to meet Grabbe in the Waldorf Astoria, the meeting was supposed to be with Grabbe's superior aboard a lecture-cruise boat that's due to sail along the Nile from Aswan to Cairo just a few days from now. So, the man we were *originally* supposed to have met – the one claiming to either possess, or know the whereabouts of, the Tuaoi Stone, or Lodestone – might still be taking that cruise.'

'You think so?'

'Why not? He was going to meet our men on that boat, then changed his mind and had them killed instead – so there's no reason to suppose that he's not still taking that Nile cruise. I believe that man, whoever he is, will be on that boat.'

Having sated his appetite, Zweig had his daily dose of revitalization drugs in tablet form, including some HCG capsules, which are hormone extracts from

the urine of pregnant women. He washed all these down with another pint of his protein drink, then stared grimly at Hans.
‘Yes,’ he said, ‘I think you’re right. I think that man will be on the boat. And, if that bastard will be aboard, then so too will we. Book passage immediately for the four of us and two personal stewards.’
‘What if the boat’s fully booked?’ Hans asked.
‘No problem,’ Zweig replied, glancing sideways at Elena who, experienced in the ways of men, knew not to mess with him. ‘If the boat’s fully booked, simply purchase the whole tour company outright, cancel the reservations of those scheduled to utilize the cabins we need, then book our entourage into them instead.’
‘What if the man we want is one of those whose cruise is cancelled because of our requirements?’
‘He won’t be. If he’s the man we want, he won’t let himself be pushed off that boat. He’ll have money – and arrogance. Anything else?’
‘I haven’t had anything to eat or drink since – ’
‘Yes, yes,’ Zweig said impatiently, having no time for trivialities. ‘I understand, but you can stuff yourself later. You must book the boat or buy the company immediately – so get straight to the telex. Report back when you’ve done it.’
When Hans had left the cabin to do as he had been bid, Zweig turned to Elena.
‘My muscles need toning up,’ he said. ‘Come here and do what you’re being paid for.’
Elena swung her long legs off the sofa and sauntered over to him, every movement of her body accentuated by the shiny *cheongsam*, the curves of her legs emphasized by stiletto-heeled shoes. Her peroxide blonde hair was spilling over full breasts, her brightly painted lips pouting when she stopped in front of him.
Zweig lay back on the surgical bed and sucked in his big belly.
‘You want the oil?’ Elena asked, her gaze roaming.
‘Yes,’ Zweig replied. ‘And please bring in my daughter.’
‘*Now*?’
‘Yes,’ he said. ‘Now.’
Elena nodded and pressed the intercom, asked someone to send Ingrid in, then picked up a bottle and leaned down across Zweig. Licking her scarlet

lips, breathing sensuously in his face, she poured warm oil from the bottle onto his stomach, then started rubbing it into his skin with the palms of her hands.
‘Cover me up before my daughter arrives.’
‘You’re real considerate, Wilhelm.’
Nevertheless, she draped a white towel over his stiffening member and continued rubbing the oil into the pores of his skin.
‘What’s this Tuaoi Stone, or Lodestone?’ she asked to fill the silence. ‘Why the big deal? Is it some kind of diamond?’
‘No,’ Zweig replied. ‘It is much more than a diamond. It is perhaps the most valuable, least known antique in the world – much discussed but very rarely seen. It is a pyramidal stone – possibly the missing peak of the Great Pyramid of Giza in Egypt – and is reported to possess magical properties and extraordinary powers. Indeed, it is said that the man who holds the Tuaoi Stone will own the whole world. Certainly it is the world’s most sought-after artifact – and, this being so, it obviously belongs in my collection.’
‘It’s probably just a diamond,’ Elena said. ‘You know? A girl’s best friend.’
‘Yes, dear,’ Zweig responded, stifling his impatience, not amused by her feeble attempt at wit. ‘You’re probably right.’
Ingrid entered like a wraith, her gaze wandering nervously. Her shoulders appeared to be stooped by the weight of her pinned-up hair; and her face, which had a delicate, restrained beauty, was filled with the kind of trepidation that made breathing difficult.
Studying her, Zweig despaired, wondering what would become of her, but also taking pride in the fact that she was his handiwork.
He had terrified her from the day she was born and now he saw the results of his endeavours.
‘Ingrid,’ he said, enjoying his little sport. ‘Come here. It’s been such a *long* time. Say hello to Elena.’
‘Hello, Elena,’ Ingrid whispered, lowering her gaze. ‘It’s nice to see you again.’
‘Yeah, kid, same here.’
Elena’s practised hands had thoroughly smeared the oil all over Zweig’s body, and her fingers, long and thin, the nails like razors, were kneading the oil into his skin and exciting him greatly. He almost groaned with pleasure, but instead sighed discreetly, smiling up at his disconcerted daughter, aware

of how this was wounding her.
‘Would *you* like a massage?’ he asked her. ‘I’m sure Elena would – ’
‘No, thank you, Father,’ Ingrid quickly replied.
‘Of course not,’ Zweig said. ‘You would have to take your clothes off, after all, and that isn’t you, is it?’
Ingrid didn’t reply, but simply studied the floor. She was slender and fragile in her shapeless cotton dress, which perfectly matched her hazel eyes and colourless pallor.
Zweig knew she was trying not to look at the towel draped over his loins, since given its present shape and quivering movement, it called attention to everything she feared, which could only amuse him.
‘Since you are back here for six weeks,’ he said, ‘and since clearly you have no friend to look after you, I have decided to bring you with me on a cruise along the Nile. This trip, if not exciting – since nothing, I fear, could truly excite *you* – will at least keep you occupied. Is that acceptable, *mein Fräulein*?’
‘Yes, Father.’
‘You didn’t have any other plans, did you?’
‘No, Father.’
‘Well, that’s settled, then.’
He was just about to tease her about her mother, or, even better, her non-existent love-life, when Hans returned to inform him that he had been compelled to purchase the Egyptian tour company outright, that the deal should be completed by midnight, using Zweig’s Egyptian agents, and that he had therefore booked the master suite for Zweig and Elena, one single cabin each for himself and Ingrid, and a double cabin for the two stewards who would accompany them.
‘When do we leave?’ Zweig asked.
‘We’ll have to fly out from Recife tomorrow,’ Hans replied.
‘Excellent. You’ve done well. I trust you’ll now attend to all the details, such as luggage, and so forth. Please start right away on that.’
‘Yes, Herr Zweig. Thank you, sir.’
Hans bowed slightly, glanced sympathetically at Ingrid, then left the cabin, closing the door quietly behind him.
‘Ah, nice,’ Zweig said. ‘*Nice*.’
Elena’s expert hands, the nails painted blood-red, fine fingers oil-slicked,

were kneading his flabby flesh, squeezing here, pressing there, sliding down under the towel, which, he noted, was still raised on high and visibly quivering. He sighed, almost groaned, but then remembered his daughter and stared at her. She was keeping her shamed gaze on the floor, but could not hide her burning cheeks.
He studied her, amused, then started losing his senses, so eventually waved his hand in the air, saying, 'Yes, child, you may go now.'
She glanced briefly at him, her hazel eyes filled with reproach, then threw another glance at the grinning Elena, before turning on the heel of her foot and rushing out of the cabin.
The door slammed shut. Elena chuckled softly. Zweig smiled and closed his eyes, giving in to his quivering flesh, transported by Elena's fingers, sliding along him, turning his towel into a pyramid, his phallus supporting the whole edifice, his burning loins setting fire to the temples of his mind and exposing him to recollections of flame and destruction – the bloody fall of Berlin; his early days as a common criminal; torture, murder, the odd rape here and there; then his days as a mercenary in Argentina and Paraguay, setting the Indian villages to the torch, murdering those who opposed him – then to fancies about the Tuaoi Stone and the power it could give him.
He saw it, almost touched it, then came as he thought about it, crying out in guttural ecstasy as the towel slipped off him and his essence, a pure Aryan seed, found a home in Elena's hand.
'*Mein Gott*!' he groaned. '*Christ*!'
Each orgasm destroyed him more.

Chapter Four

'Now remember,' Zweig said, sitting opposite Ingrid and Hans in the *felucca* that was taking them the short distance from Elephant Island to the corniche, wiping sweat from his sun-scorched forehead, adjusting his heavy legs and stroking Elena's knee with his free hand, 'we must remain as anonymous as possible once aboard and not draw too much attention to ourselves until we find who we're looking for.'

Ingrid didn't know how her father, with his icily autocratic nature and large entourage, including two servants, could possibly imagine that a low profile

was in order, but she didn't attempt to raise that delicate question and instead, simply to make conversation, asked, 'Who *are* you looking for, Father?'

'Never mind,' he replied. 'It's not your concern. What *you* can do, *mein Fräulein*, is appreciate the exotic squalor of Egypt and be a good little girl.'

Ingrid stared between her father and Elena at the receding Elephantine Island, where the dirty-brown, ruinlike walls of the Nubian villages were surrounded by a paradisal profusion of tall shrubs and palm trees.

Aware that Elena was smiling sardonically at her, she deliberately turned her attention to the black-granite islets and many *feluccas* on the silt-laden waters of the first cataract of the river, just beyond the corniche. She should have felt intoxicated, overwhelmed by Egypt's strangeness, but instead she was feeling claustrophobic and extremely depressed.

Since leaving the sanatorium at Lake Geneva she had not been able to sleep at nights because, after her initial exhilaration at setting fire to that hated building, she had succumbed to guilt, shame and fear. Frightened of her father at the best of times, she had been even more frightened to think that someone at the sanatorium, realizing that the fire had started in her room, might have contacted him with that information. In the event, such had not occurred – and was now unlikely to – but she still suffered deep shame and horror over what she had done and was shivering even in the scorching heat of the Egyptian noon.

'God,' Elena said with a sigh, adjusting the sunglasses on her nose and glancing wearily around her, 'I'll be glad to get on the *real* boat. This bath tub's making my stomach turn.'

Ingrid studied the Arab boatsmen, observed the gently splashing water, glanced up at the billowing breeze-blown sails of the *felucca* and then sideways at the silent, watchful Hans. Wearing a white shirt, shorts, matching shoes and knee-length socks, framed by the village of Aswan and the exquisite sky beyond it, he looked quite attractive in an oddly bland, perpetually tense manner.

After being told by her father that he would have no time for her until he had settled comfortably into his suite aboard the Nile cruiser, Ingrid had been placed in the care of Hans for the duration of the journey from her father's fleet in the South Atlantic to Aswan; and she appreciated the fact that while escorting her through the mandatory tourist sites en route, he had also been the only one in her father's entourage to display the slightest recognition that, apart from being her father's daughter, she was a human being with the need for communication.

Hans had always baffled Ingrid. He was not yet thirty, blandly handsome and intelligent, yet she had never known him to be involved with a woman and thought of him as remarkably passive, virtually her father's slave. Originally hired as her father's accountant, he had shown himself to be exceptional at general administration and soon became her father's personal assistant, factotum, dogsbody. His passivity, Ingrid assumed, sprang from a combination of healthy fear of her tyrannical father – a fear common to all who knew him – as well as his childhood in an orphanage in Bremen and subsequent adoption by two fiercely puritanical German Protestants who had, according to what Hans had told her, often punished him severely for the slightest infraction. He was, she suspected, a deeply inhibited personality who would, sooner or later, break free from the many constraints that bound him – but not, she suspected, until he had broken free from her father.

She realized he was very much like herself – but possibly even more oppressed.
Grateful to him for easing her own burden, she heard the flapping sails, returned to the present, stared past the white-robed Nubian standing in the prow of the *felucca*, and saw the shoreline of the right bank approaching, with the large cruiser anchored against the corniche, framed by azure sky and shivering palm leaves. There were tourists massed near the cruiser, by dusty buses and taxis, and some were struggling up the ramp, between Arab porters.
'Now we join the tourist scum,' her father said. '*Scheisse*, how I suffer!'
The *felucca* ground gently against the side of the corniche and the Arab boatsmen jumped out to secure the craft to the bank and assist the passengers. Ingrid and Hans disembarked first, to be followed by Zweig's two Filipino

stewards and Elena, then finally by Ingrid's father who, when he stood upright in the *felucca*, made it rock dangerously.
'The luggage!' he snapped at his hapless stewards. 'Get the luggage on board!'
As the Filipinos hurried to do as they were bid, Hans took hold of Ingrid's elbow and urged her along the corniche towards the large cruiser's gangplank.
'God,' she whispered to Hans, 'he gets in such *terrible* tempers!'
'Increasingly so,' Hans replied. 'He wasn't always this bad. He's changed over the past few months.'
'What do you think it is?'
'Old age. What else could it be?'
She looked at him and saw him grinning, which is something he rarely managed. 'Well, whatever it is,' she said, 'it's awful. I don't know how you can bear working for him. It must be hell on earth.'
'I didn't know what he was like when I became his accountant. And unfortunately, once one becomes involved with your father, it isn't that easy to break away. In fact, it's downright impossible.'
'You mean, you'd leave if you could?'
'Don't quote me on that.'
He grinned even more broadly, briefly looking much livelier, but put on his impassive mask again when they arrived at the gangplank.
The large blue-and-white cruiser held over eighty passengers, the last of whom were now making their way up the gangplank.
'He's in a foul mood,' Elena said, catching up with them. 'He can't stand getting in and out of small boats. It makes him feel real embarrassed.'
'*Embarrassed*?' Ingrid said. 'My father?'
'Yeah,' Elena said, 'your father. Just because he doesn't spoil you rotten, doesn't mean he's unfeeling. I mean, he cries like a baby.'
Ingrid shuddered at that thought and then slipped in behind the last person moving up the swaying, creaking gangplank. Glancing to her left, she saw the two Filipino stewards pushing a trolley laden with luggage along the edge of the dock, with black water, green palm trees and blue sky behind them, and her huge, bloated father bawling at them.
Mortified by that sight, she continued up the gangplank, stepped into the reception area of 'C' deck, received smiling greetings from the French

captain and some stewards, then turned back to the gangplank and looked along the quay as a battered taxi, churning up clouds of dust, screeched to a halt.
The rear door of the taxi opened and a man who looked to be in his late twenties, about her age, wearing a crumpled blue-denim jacket and jeans, with a camera bouncing off his open-necked check shirt and his brown hair flapping untidily over the forehead of an unshaven, pleasant face, emerged from the vehicle, slammed the door shut, then retrieved his holdall and paid the Arab driver.
'Now give me a bite of *that*,' Elena said admiringly as she looked down on the dishevelled Caucasian on the quay. 'Most of the passengers on these boats are geriatrics, so what a sight for sore eyes *he* is! Uh, uh, looks like trouble…'
Obviously convinced that he had almost missed the boat, the Sight For Sore Eyes picked up his holdall and hurried to the foot of the gangplank just as the first of the two Filipino stewards was about to step onto it with a heavy suitcase in each hand. The two men collided and were struggling to disentangle themselves when Ingrid's father stepped forward, grabbed the white man by the shoulder, threw him away from the gangplank, and bawled, 'How *dare* you come this late! The crew should have been on board hours ago. You're dismissed! On your way, you *Schwein*!'
The young man lowered his holdall to the ground and stared disbelievingly at Zweig. 'Swine…? Dismissed…? *Crew*…? What the hell do you mean? *I'm* not a member of the goddamned crew! I'm a tourist! A paying *passenger*!'
'You're a *passenger*?' Zweig queried, obviously not believing his own ears. 'You look like you belong in the engine room. What kind of boat *is* this?'
'Hey, hold *on* a minute,' the young man said, speaking in what was now clearly an American accent and melodramatically holding up his right hand with the fingers outspread. 'Just who the hell do – ?'
'The name is Zweig. *Wilhelm* Zweig! And I have no time for small talk. So step aside and let me board this boat
– which I happen to own.'
'Oh, great,' the American replied. 'Big deal! I'm *impressed*! The owner of the boat, no less. Well, just remember that I paid for this trip. I'm *supporting* you, buddy!'
Elena offered a low whistle of admiration for that comment, but Ingrid, when

she saw her father straightening his spine, held her breath and felt an unexpected rush of concern for the brash young American.
'Who *are* you?' her father growled. 'What's your name? *I want to know who you are*!'
'Remick,' the American replied, staring fearlessly at Zweig. 'The name's Remick. *Gerry* Remick! From New York City. And don't you forget it!'
Ingrid couldn't resist feeling admiration for the American as he grabbed his suitcase and resolutely ascended the gangplank, ignoring Zweig who fiercely observed his every move while opening and closing his ham fists.
Entering the gloomy reception area, the young man – named Gerry Remick, as Ingrid reminded herself – lowered his suitcase again, checked in with the purser, then glanced back over his shoulder to where Zweig, at the bottom of the gangplank, was suddenly galvanized back into action and bawled at his stewards, 'What are you staring at, you imbeciles? *Get that luggage on board*!'
The Filipino stewards rushed to obey as the American grinned impishly, then shook his head from side to side in a rueful manner.
'You people are on this boat as well?' he said. 'Oh, boy, I'm in heaven!'
Reaching out with his right hand, he said with childish pleasure, 'The name's Gerry. Gerry – '
'Remick,' Elena said, undulating like a scenic railway as she stepped forward to shake his outstretched hand. 'We heard it all from up here. I'm Elena, a friend to Mr Zweig; this is Hans, Mr Zweig's personal assistant; and this is his daughter, Ingrid. We're all *delighted* to meet you.'
'Whoops!' Gerry said. 'I'm sorry. I mean, I didn't know that Kraut, the old goat, was related to – '
'Don't worry,' Elena said, chewing gum, smiling flirtatiously. 'We understand perfectly. Are you going all the way downriver, to Cairo?'
'Yep.'
'That's terrific,' Elena said, taking a deep breath and releasing it again. 'Let's get together *real soon*.'
The attractively dishevelled American opened his mouth to reply, but before he could do so Elena had brushed past him and posed herself at the top of the gangplank, spreading her hands in a theatrical gesture of welcome to Zweig.
'And you?' Gerry said, staring directly at Ingrid in a way that made her feel pleasantly strange. 'You're that guy's… *daughter*?'

Ingrid helplessly shrank into herself. ‘Yes,’ she whispered, ‘I am.’
‘Well, don’t worry about it. We don’t pick our own parents. I mean, I’m not holding you responsible for his lousy behaviour. It’s the way of the world, right?’
When he grinned, Ingrid felt warm all over and slightly unreal. She tried to meet his gaze, to stay calm, but just blushed even more.
‘Yes,’ she said. ‘I suppose so.’
‘You have really sweet eyes behind those specs. And your shy smile’s a winner.’
‘Please stop that. You’re embarrassing me.’
‘Yeah, I can see that. Well, Ingrid, it’s nice to have you aboard. I hope we meet again soon.’ He glanced back over his shoulder and saw her father stepping onto the deck. ‘Jesus,’ he said, ‘I’d better get out of sight. Your dad’s bigger than I am.’
He nodded emphatically at her, then picked up his holdall and quickly departed, disappearing through the nearest hatch to go in search of his cabin. Sighing, feeling almost bereaved, Ingrid turned reluctantly to face her father and his tarty Elena.
‘Herr Zweig?’ the ship’s captain asked, stepping forward. ‘I am Captain Malraux. Please let me welcome you aboard the – ’
‘Yes, yes,’ Zweig responded in an irritable manner, contemptuously slapping aside the captain’s extended hand. ‘I am already sick to death of this filthy ship. Where are our cabins?’
‘*Excusez-moi*,’ the captain managed to respond, his voice breaking fearfully. ‘This way, Herr Zweig.’ He escorted them along a starboard passageway, then up to ‘D’ deck and their cabins. ‘This, Herr Zweig,’ he began at the first open door they came to, ‘is your master suite, which as you can see is – ’
‘*Oui, Monsieur*,’ Zweig interjected rudely. ‘I know what it is. I am not a halfwit, after all. So please go straight up to the bridge and get this boat on the move before any more American tourist scum can crawl aboard with the rats. *Au revoir, mon Capitaine*.’
The captain inched backwards, bowing repeatedly, then disappeared gratefully through a hatchway while the Filipino stewards sorted out the luggage, placing the bulk of it in Zweig’s master suite and the others in their respective cabins.
Ingrid had been hoping that her father would invite her into his cabin for a

discussion on her six-month stay in the sanatorium, but alas, such was not to be the case. Even as she thought to confess to having set the sanatorium on fire
– feeling that his anger could not be worse than his indifference – he opened his mouth, yawned ostentatiously, and said, ‘Thank God we are here at last. Now I must have my rest. I will see you this evening, my child, when dinner is served. *Elena, where are you?*’

Ingrid did not need to be told that Elena was already in the master suite, stretching out on the double bed, preparing to earn her keep; so, shuddering, she whispered agreement and hurried along the passageway to enter the adjoining cabin, her much smaller cabin. Closing the door carefully behind her, she sat on the edge of her narrow bed, where she sighed with relief.

Recovering from her hurt feelings, she was almost amused by the idea of her father imagining he could remain incognito on this boat; but then, when she thought of the young American she had met, her growing amusement gave way to a longing to see him again.

Young? Not really. Clearly, he was in his late twenties, just like she was. But he looked a lot younger, an intelligent naif, and that touched her oddly. She thought of his blue eyes, his innocent fearlessness, and wondered if he would even recognize her the next time they met.

Sighing again, she was about to lie down on the bed when the muffled growling of the boat’s engines made her twitch. Relaxing, she lit a cigarette, thought of the blazing sanatorium, then gazed out of her cabin window as the boat pulled away from the corniche. She saw the village of Aswan, white walls and green palm trees, receding and then slipping smoothly past, to give way to the desert.

Egypt , she thought. I *am in Egypt… And I don’t give a damn*.
Sweaty and exhausted, feeling lonely and unreal, she considered unpacking, couldn’t find the energy to do so, and instead stretched out on the narrow bed, closed her eyes and let herself drift away…
She visualized her dream lover, a darkly handsome, kind man; imagined him,

then *felt* him pressing upon her to obliterate pain and fear. He would touch her gently – as she was touching herself right now – and in so doing transport her through rapture, away from the real world. She saw him, almost felt him, was reaching out to him – and then he suddenly disappeared, melting magically back into the darkness, and was replaced by the image of her smirking father, who seemed to loom over her.

Even as she thought of him, she actually heard him – yes, in the adjoining cabin – and was brought back to reality by the sound of his head banging against the dividing bulkhead as he took his disgusting pleasures from Elena and groaned his instructions.

'That's it! Take it easy. Yes, yes, that's the way! Yes, Elena! *Sehr gut*!'

His head banged against the bulkhead again, a loud noise that shocked her, and she jerked upright, fighting to control her racing heart and prevent her cheeks from burning.

Planting her feet firmly on the floor, she stared through the porthole, saw the shimmering haze of the Egyptian afternoon turning into a crimson dusk. Her father's moans and groans faded away into silence, eventually, mercifully, but she still thought of being trapped with him on this boat for another five days.

It was a terrible thought.

However, just as she was about to plunge into a deep depression, she thought of Gerry Remick, that brash young American, remembered that he had flirted in a mischievous manner with her, and felt a warm rush of affection for him. Startled by her feelings, unable to shake him from her mind, feeling better each minute that she sat there thinking about him, she finally decided that she had to get out of the cabin and breathe some air on the top deck.

He might be up there, after all. In fact, he was almost certain to be up there. He would want to watch the boat leaving Aswan and heading along the great river, past the shifting sands of the desert.

Yes, of course he would. He wouldn't stay in his cabin. He was bound to be up there on the top deck, watching Egypt slip past the boat. He would be there at the railing, looking out, when she came up behind him…

She realized, then, how badly she wanted to see him, so stood up, put on her flat shoes, and hurried out of the cabin, heading with all haste for the top deck, for fresh air and freedom.

She did not immediately see Gerry. Instead, she saw – leaning against the railing of the top deck with a few other passengers, but turning his head to stare steadily at her, as if, indeed, he had been expecting her arrival – a man who appeared to be about sixty years old, but was oddly handsome, silver-haired and suntanned, his face remarkably unlined, his gelid eyes extremely bright and penetrating even from this distance.

His smile was not malicious, but seemed gently mocking, and the intensity of his gaze was such that it almost made her swoon in an unnatural, disturbing manner before releasing her by simply moving elsewhere.

At that moment she was convinced that the strange man at the boat's railing was deliberately redirecting her own mesmerized gaze – which, in obedience to him, came to rest in the opposite direction, where the American, Gerry Remick, still dishevelled but appealing, was leaning on the deck's protective brass railing, staring into the crimson sunset, his blue eyes almost certainly reflecting palm trees, sand dunes and darkening sky, before turning towards her, staring at her, focusing upon her, to give life to the thin line of his lips and encourage a melting smile.

'Gee,' he said to her in the cloudily pock-marked Egyptian twilight, 'it's the girl with the rainbow eyes and shy smile. Can I buy you a drink?'

Consumed with emotion just to see him, she nodded assent.

Chapter Five

Dusk over the desert was intoxicating. It was just such a mood that encouraged Gerry to stand at the top deck's protective railing during his first evening aboard and, gazing out over the darkening, whispering Nile river, quietly curse the fact that he hadn't been able to bring along his fatter books on ancient Egypt. Realizing that thinking about this too much was going to frustrate him greatly, he decided to return to his cabin and relax with a bottled beer and a dip into his book on quantum physics.

It didn't work out that way.

Turning his back to the railing, he saw Wilhelm Zweig's shy daughter, Ingrid, staring at him from across the deck, the light reflecting off her spectacles and making her look rather odd. She took a step towards him, then stopped, hesitating, glancing around her, and he realized that she wanted to speak to him, but couldn't quite manage it.
Normally awkward with people, he felt surprisingly at ease with her, and said, 'Gee! It's the girl with rainbow eyes and shy smile. Can I buy you a drink?'
She just stood there, embarrassed, then stepped out of the violent twilight, nervously rubbed her eyes with a finger stuck up under her spectacles, and eventually managed to nod as if in assent.
'Does that mean yes?' he asked her.
She nodded again.
'You're a real fancy talker,' he said, surprised by his instant ease with her. 'This conversation is red hot.'
That at least got a smile out of her. She moved a little closer, looking at him with sombre eyes magnified behind her spectacles. He didn't think she would come any closer, but that didn't bother him. He hadn't had a good sex life (he was too involved with his mind) and after all the groping and groaning, after his many romantic debacles, he was pleased to be in the company of someone even worse off than he was.
'You don't *mind* coming with me for a drink, do you? I mean, I don't want to *force* you.'
'No!' she exclaimed in a soft, breathless outburst that did his heart good. 'Of course not! I wouldn't say I wanted to come if I didn't mean it. I wouldn't do that at all.'
She seemed so intense he almost laughed, but something stopped him from doing so. It was something about her, a fragility, a naive, helpless honesty… He wasn't too sure *what* it was, but he sensed she'd hurt easily.
'You're first trip along the Nile, is it?' he asked, feeling stupid, not knowing what else to say.
'Yes,' she replied.
'Looking forward to it?'
'Yes,' she said again, thus reminding him that conversation with her might not to too easy and that a drink of the alcoholic variety might loosen her tongue.

‘Well,’ he said, all too aware of his own histrionic sighing, ‘I suppose we’re wasting time standing here talking, so let’s go find the bar.’
‘Yes,’ she said. ‘If you want to.’
He knew she was shy, but started thinking her strange when she finally stepped close to him and asked, in a melodramatic whisper, ‘Do you know that man standing farther along? On your right. The one with silvery hair.’
When he looked, no such person was in sight. ‘*What* man?’ he asked her.
She stared along the deck, furrowed her brow in consternation, her eyes blinking repeatedly behind the thick-rimmed spectacles, displaying her bewilderment.
‘He was there,’ she said. ‘I swear it. A handsome man with silvery hair. He looked at me when I came out on deck… and then looked at you.’
‘I promise you, I didn’t arrange that. I had nothing to do with it. Or with him.’
‘You’re sure?’
‘Yeah, I’m sure.’
Visibly shivering, and again blinking as if dazed, she studied the other passengers wandering to and fro in the humid air of the Egyptian evening, then returned her gaze to him, staring at him with an air of confusion and rising embarrassment.
‘You won’t believe me,’ she said. ‘It sounds silly, I know, but that man was definitely there, leaning on the railing, and when he stared at me, a very direct stare, with extremely intense, grey eyes, I almost swooned on the spot. No,’ she hastened to add, obviously sensing his scepticism, ‘I don’t mean it was like a fainting fit… It was more like some kind of brief trance… A sort of wide-awake dream in which he controlled me. And then he smiled – a peculiar smile, as if he didn’t quite know how to – and then turned his gaze on you… And I swear that by simply doing that, he made me look at you as well. He caused me to *see* you.’
‘Really?’
‘Yes, really.’
Already attracted to her, and intrigued by the possibility of having a mesmerist aboard, Gerry gave her an encouraging smile, then tried to look serious.
‘Gee, that’s real strange. I mean, it’s pretty far out. But maybe you just had a little turn caused by the heat and humidity – which, after all, you’re not used

to – and that silvery-haired guy probably had nothing to do with it and has doubtless just disappeared into the bar or back to his cabin. So if we go, as we agreed, for that drink, he might be in the bar.'
'Yes,' she responded, almost fearfully. 'I suppose that's a good idea.'

Chapter Six

Gerry thought it was a *terrific* idea and couldn't wait to get there, so he took hold of her elbow and guided her along the deck, past where the mystery man had reportedly stood, and then down a single flight of steps to the boat's only bar. Though Ingrid in one sense looked plain, Gerry still found her sexy, a bit vulnerable, sort of helpless, and he was conscious, *very* conscious, of her warmth and suppressed femininity.

'He's not here,' Ingrid said, her face falling as she glanced into the bar and saw only the normal folk.
'Oh, really?' Gerry responded. 'Well, don't worry. He's probably just gone back to his cabin to read a good book.'
'It's our first night aboard ship,' Ingrid insisted. 'You'd think he'd want to explore it.'
'He's not as young as you. I mean, you *did* say he had silvery hair, so he must be well past it.'
'Yes,' she murmured with no great deal of confidence. 'I suppose that's the answer.'
'Anyway, stop worrying about it,' he said after ordering a brandy for her, a Stella beer for himself, and indicating the nearest vacant seats. 'You probably just imagined it. You're in a foreign country, a very strange and *different* kind of country, and that can be disorientating and play tricks with the mind. I mean, the guy probably just smiled at you in a friendly manner – sort of welcoming you aboard – and you just imagined all the rest. Don't you think so?'
'Well… maybe.'
Wondering what had *really* disturbed her, finding himself increasingly sympathetic to her chronically shy nature, and realizing that had it not been for her pinned-up hair, thick-framed spectacles and old-fashioned clothing, she would be pretty attractive, he decided diplomatically to change the

subject.
‘Well,’ he started, ‘at least we’ve left Aswan. Now the sky will be visible.’
Although this was true, the boat had only travelled a short way along the river and then anchored again, at a dilapidated riverside quay, where it would spend the night before embarking on its two-day journey to Luxor first thing in the morning. So facing Ingrid over a low table in the small bar – which was now filled with mildly drunken, mostly geriatric fellow-passengers – Gerry tried to distract her from her neurotic concerns by pointing through the panoramic window at the sand dunes silhouetted by the starlit splendour of the Egyptian night and showing her the different constellations in the sky.
‘I know the sky like the palm of my hand,’ he said, ‘and that’s not *all* I know. I mean, I study a lot.’
‘You go to university?’
‘I did,’ he replied. ‘But they threw me out. I was studying divinity at Harvard, but got sidetracked into related subjects, such as unexplained phenomena and the occult.’
‘Unexplained phenomena?’
‘*You* know – flying saucers, things falling out of the sky, haunted houses, the magical properties of pyramids, and so on.’
‘Oh,’ she said meekly. ‘How interesting.’
‘It is, Ingrid. Believe me.’
‘You must be really bright.’
‘Yeah,’ he agreed, suddenly feeling really dim. ‘Which just means I talk a lot.’
He had always been socially inadequate, emotionally distant, distracted, and he still hadn’t learned to speak to women as if they were human. He was trying right this minute, he really was, but he kept saying the wrong things.
‘It’s a relief to meet an intelligent woman,’ he said, ‘instead of a dumb blonde. Now let’s have another drink.’
Covering his confusion and regaining his confidence with a second round of drinks, he soon found himself telling her all about his life in New York and, after that, elaborated on his fascination with ancient Egypt and its possible relationship to inexplicable phenomena, including the rumoured magical properties of certain of the pyramids, most notably the Great Pyramid at Giza, to where they were headed.
‘And so,’ he concluded, ‘that’s why I came to Egypt – to solve all these

historical mysteries and then write about them.'
'You're going to write a *book*?'
'Nothing to it. I'm a writer to the manner born. The problem with most writers is that they write impressively about nothing in particular. But me, I have a pretty high IQ and that means I can think straight. So I've come here for research before writing a great book.'
'I think that's truly admirable,' Ingrid said.
'So do I, Ingrid.'
Having explained himself, and not wanting to hog the whole conversation, he asked her if *she* believed in inexplicable phenomena. She coughed into a tiny fist, finished her drink, looked distinctly uncomfortable, then muttered, 'I don't really know what to say. I mean, I've never *personally* taken an interest in such things… but my father, strangely enough, does. He is, I believe, making this trip for that very reason.'
'Really? No kidding! Well, I never would have guessed it. I mean, your dad doesn't seem the sort to have such interests. In fact, he seems like a strictly materialistic, very powerful guy who scares the hell out of everyone around him. He even seems to scare *you*.'
'Yes,' she agreed sadly, 'he does.'
'I hate to say it, since he's your dad, but I nearly punched him out down on that jetty. It was just his age stopped me.'
'I'm glad you didn't try it, Gerry. I mean, he's really very *strong* for his age.'
'He's all blubber and hot air… Christ, I'm sorry. I didn't mean that. I…'
'It's alright,' Ingrid said. 'Just don't make the mistake of thinking he's all hot air. I mean, try not to antagonize him. In fact, keeping out of his way as much as possible would be recommended. He's big, but it's not blubber. He's really very strong. And he has a really violent streak that can get out of control. You've already antagonized him once; try not to do it again.'
'I can't believe you're serious.'
'I am.'
'Is he violent towards you?'
'No, not really. It's just that…' She hesitated and blushed, as if embarrassed by what he had said, then blurted out, 'Could I have another drink?'
'Sure, Ingrid. Naturally.'
Grateful for an escape from his *faux pas*, he bought two more drinks, not without dwelling upon the fact the timid Ingrid Zweig was on her third neat

brandy. Returning to the table with fresh drinks in his hands, he was surprised at how much he wanted to see her after a five-minute absence.
She certainly was plain, sitting there at the low table, framed by the exotic Egyptian night (which was itself framed by the panoramic window), with her shoulders hunched in a pitifully self-effacing manner. But when he gave her the fresh brandy, she licked surprisingly sensual lips, rubbed her flushed cheeks, confessed that she didn't normally drink alcohol, then sniffed back threatened tears.
'Oh, shit,' Gerry blurted out, thinking it was his fault again. 'I'm really sorry. I didn't mean to – '
'No, no,' she insisted, to his great relief. 'It's not you. It's just…'
'Your dad?'
She sighed forlornly. 'Yes.'
'He's not violent towards you, but he mistreats you.'
'Yes… Yes, he does.'
'How?'
'He makes me feel that he despises me. He pretty much ignores me. He keeps me at a distance by either sending me to private boarding schools or sanatoriums. So I only see him once or twice a year. And when I'm due to visit him, to stay with him for a while, I always dread it.'
'Why?'
'He makes me the object of his mockery. He humiliates me in front of his staff. He deliberately shames me by being bold with his mistresses when I'm in their presence. Like he does with Elena. And before Elena, when we were on trips together, like this one, he even brought professional whores to our hotels, especially when we shared large suites with separate bedrooms, which he could, of course, afford. He would take the whores into his bedroom, knowing I could hear everything through the walls and would be mortified.'
'Jesus, Ingrid, that's awful.'
'He does it to embarrass me. To make me feel ashamed. He even did it this evening on this boat. Making love to Elena in the adjoining cabin, knowing I could hear everything they were doing through the wall of *my* cabin. It just made me feel sick.'
'I don't blame you,' Gerry said, feeling outraged on her behalf, drawn even closer to her by her suffering, wanting to make amends for it by smashing Wilhelm Zweig to a pulp, despite Ingrid's warning. 'Is that why you…?'

But he felt too embarrassed to finish his sentence, to ask the vital question, until she looked directly at him and quietly said, ‘Yes?’
‘Well, I don’t want to offend you, but…’
‘Yes?’ she said again.
‘You said he always sent you away to private boarding schools and sanatoriums, so why…?’
He still couldn’t bring himself to ask the question, so she helped him out.
‘The sanatoriums?’ she said.
Gerry sighed with relief, though he felt himself blushing. ‘Yeah, right,’ he said.
‘I shouldn’t be telling you this,’ she said. ‘I mean, I hardly know you.’
‘Forget I asked,’ he said, instantly feeling flustered again. ‘I’ve no right. I just…’
‘Wanted to know. Well, that’s natural, Gerry. And I *want* to tell you. I like you. I already feel I can trust you.’
‘You can,’ Gerry said emphatically, pleased to be told that she liked him, but trying not to show it. ‘Get it all of your chest.’
The mention of her chest made *both* of them blush, but Ingrid then offered a pained smile and said, ‘Oh, well, confession time… I had a few problems, Gerry. Mainly because of the way my father treated me, often making me hate myself, even more than I felt he hated me. So I did a few things. Idiotic things. Bad things. Compulsive behaviour. Cutting myself. Shoplifting. Then stealing from the other girls in my boarding schools. And finally, becoming something of a pyromaniac, setting fire to my rooms in the sanatoriums. It was my way of taking revenge against my father, of embarrassing him as he’d so often embarrassed me, maybe also trying to get his attention, but it only led to a variety of psychiatric treatments and, of course, to a series of sanatoriums. So there you are, Gerry. Now you know. You’re having drinks with a bona-fide lunatic.’
‘You’re not remotely a lunatic, Ingrid. You’re as sane as I am.’
‘Well, you might as well know that when in the last sanatorium, which I hated, just before leaving to join my father on his boat in the South Atlantic, prior to flying on to here, I deliberately set fire to a wicker basket in my room, setting the whole room on fire. What’s that, if not lunacy?’
‘It sounds more like desperation,’ Gerry said. ‘I mean, you said it yourself. You were having your revenge, hoping to embarrass him the way he’d

embarrassed you, and also desperately trying to get his attention, even if negative. I mean, any kind of attention, even his anger, would have been better than nothing. So that's what you were doing.'
Gerry realized, then, that every minute in her presence was making him feel even more masculine and in command. This pleasant feeling was only enhanced when she glanced distractedly around her, as if seeking escape, then wiped tears from her cheeks, readjusted the spectacles on her nose, and eventually, as if releasing a great deal of anxiety, blurted out, 'I hate him! I *despise* him… And I'm frightened to death of him.'

Chapter Seven

Ingrid sank back into her chair, folded her hands in her lap, turned them this way and that, examining them, trying to hide from his gaze. Touched by that sight, unexpectedly concerned for her, Gerry reached across the table, laid his hand on her shoulder, and said, 'It's okay. There's no need to be embarrassed. Why not tell me about it?'

Clearly disturbed, she looked left and right, studied her hands again, then said, almost whispering, 'My father was a Nazi Wolfcub and soldier during the Second World War – '

'That's nothing to be ashamed of,' Gerry interjected helpfully. 'I mean, you can't be responsible for the sins of your parents, so you shouldn't worry about that.'

'No,' she said, shaking her head from side to side, 'that's not the problem. I only mention it because it has a bearing on everything else. According to what relatives told me, as a Nazi Wolfcub he was trained to bait the Jews, had actually killed by the time he was sixteen, and then, during the fall of Berlin in 1945, when he was eighteen, he was captured and sexually abused by Soviet troops. Initially traumatized by the experience, he seems to have defeated the trauma shortly after the war by scavenging for survival in the ruins of Berlin, becoming a black marketeer, then pimping for Allied troops, eventually moving on to fullscale crime, including extortion and murder. In other words, he had become totally ruthless and, according to some reports,

sadistic. And he *is* sadistic, which is what led to the rest of it.'

'Okay, Ingrid, go on.'

She sighed, turning her hands this way and that, keeping her gaze fixed upon them.
'By 1948, when he was twenty-one, he was quite well off financially and had learned to handle himself socially, with fine clothes and good manners. Because of this, he managed to marry the wealthy daughter of an aristocratic Berlin couple, thus ensuring himself some very useful connections during the post-war boom. Then, in 1950, his wife *and* her parents were killed instantly when they were involved in a hit-and-run car-crash. However, according to certain relatives, the police later located the driver of the truck involved in the crash, and he swore that he'd been paid by an unknown person to arrange that crash. That unknown person was never found – but the leading suspect was the man who later became my father.'
'Wilhelm Zweig.'
'Yes.'
'You mean, he deliberately arranged for the killing of his own wife and in-laws?'
'Yes, Gerry. Exactly.'
Her sigh was like a light breeze through long grass: a sad and lonesome refrain.
'Go on,' he prodded her gently.
'Shortly after that so-called accident,' she continued, studying her ragged fingernails and not pleased by the sight of them, 'my father fled from the law in Berlin, taking with him the wealth he'd inherited from his dead wife and inlaws, as well as a great collection of the art treasures that he'd purchased from those Nazis who'd stolen them from formerly wealthy Jews. Eventually finding his way to Argentina, he married another woman, my mother, the daughter of Protestant Germans who'd left Germany many years before.'
'What in hell could she have seen in *Zweig*?' Gerry asked her – none too subtly, as he instantly realized.
Ingrid just shrugged forlornly. 'I don't know. Maybe he just overwhelmed her. Certainly, having heard certain stories about my father's past activities, my grandparents tried to prevent the marriage; however, they *also* died in

mysterious circumstances – and not long after their passing, possibly when still in shock, my mother married my father.'
'The shock,' Gerry said emphatically. 'That would certainly explain it. You don't marry a monster like that unless you're out on a limb.'
He saw the hurt in her eyes and knew he'd said the wrong thing again, but covered up for it by reaching across the table and taking hold of her shoulder, shaking it gently.
'Hey, I'm sorry,' he said. 'I shouldn't have said that. I mean, he's still your dad, after all. Sometimes I could cut my own tongue out. I mean, I…'
'It's alright, Gerry. It doesn't matter. I know what you mean.'
'What about your mother?' he asked to change the subject. 'Do you even remember her?'
'Just. My father became some kind of mercenary, involved in a lot of dirty work for the dictators of Argentina and Paraguay – the extermination of the Ache Indians, the murder of political opponents, and so forth. My mother despised him for it, but her contempt only encouraged him to abuse her terribly. Eventually, she died at home in Cologne, after a long, painful illness, the cause of which was never diagnosed because my father refused to let her go to hospital. She was always treated at home by *his* personal physician, a former Nazi doctor, and then, when she died, he had her cremated before an autopsy could be conducted. He had friends in high places by that time, so he could get away with that. Other friends and relatives, however, reportedly expressed serious doubts about the whole business.'
'Doubts? What doubts?'
Ingrid shrugged again. 'I don't know. I try not to think about it. It's not something I want to think about. It's all in the past now.'
Her voice trailed off into a lengthy, pained silence. Now Gerry wanted to protect her, to make amends for all her suffering, and found himself squeezing her shaking hands and drawing one of them to him.
'You might as well tell me the rest,' he said. 'You might as well let it out.'
'Yes,' she said. 'Yes, I think so…' She stuck a finger under her spectacles, rubbed her tears away, sniffed and looked down at the table, then said softly, 'By the time of my mother's death, my father had already been very successful at using his inherited money and stolen works of art as the basis for ever-expanding wealth and power; and with the passing of my mother, whose inheritance he also claimed, he just doubled his activities in that

direction.'
'And you're that bastard's daughter!' Gerry said sympathetically.
'Yes,' Ingrid said shamefully. 'Unfortunately I am. And I've been in and out of mental institutions for that very reason.'
Deeply pained to hear all this, Gerry squeezed the hand that was folded in his and said, 'That's okay. Don't worry.'
She nodded, offered a grateful smile and sniffed back more threatening tears. 'Like I said, my father seemed to despise me as much as he had my mother, so he sent me to those boarding schools, rather than have me around him, repeatedly humiliated me when I *was* around him, and, contrary to what I told you before, beat me and locked me in my bedroom if I annoyed him.'
'That bastard! The shit!'
But this time *she* squeezed *his* hand, as if pacifying him. 'So now you can see why, by the time I was an adolescent, I had a lot of neuroses, most of which were probably caused by my mother's premature death and, even more, by my father's obvious contempt for me.'
At that moment, Gerry could happily have killed Wilhelm Zweig, but he didn't let her know that. Instead, he simply nodded, hardly knowing what to say, feeling a deep ache inside while she continued her sorry tale.
'More than that,' she said. 'Since he's become a power unto himself – wheeling and dealing internationally in finance, art, property and, particularly, the sale of armaments to all and sundry – he's also grown increasingly megalomaniacal, and now seems to be dreaming of the day when he'll personally resurrect his so-called Eternal Third Reich, as envisaged, so he told me, by the only man he's ever revered above himself, namely, his beloved *Führer*, Adolf Hitler.' She paused, took a deep breath, then said in a sorrowful tone of voice, 'So… that's my father.' After watching her slip her thick-framed spectacles down the bridge of her nose, wipe a few tears from her eyes, then slide the spectacles back into position, Gerry said, 'Jesus Christ, what a story! What a *bastard* your dad is!'
He could scarcely credit the extent of his own outrage, was shaken by the depth of his feeling for her, his swiftly growing desire to hold her and breathe new life into her. He remembered the pain he had felt when his father had died, vividly recalled the horror, grief and anger it had brought him; but the passing of Ingrid's mother must have been even worse, since it was possible that her death had actually been murder and that her father had done it. Yes,

she had lost her mother just as he, Gerry, had lost his father, but in her case the haunting was more acute because of what remained unresolved.
When he thought of that, his heart went out to her, taking part of him with it. He didn't want to believe it, was frightened to feel it happen, and was denying it to himself in the turmoil of his thoughts when the blond young German, Hans, to whom he had been introduced when boarding the ship, offered a welcome distraction by entering the bar. Wearing a white shirt and black trousers, he looked as handsome as a movie star. Feeling instantly threatened, Gerry wondered just how close Hans and Ingrid were.
'I'm sorry to interrupt,' Hans said to Ingrid, in what sounded like a genuinely apologetic tone of voice, 'but your father sent me to remind you that dinner is about to be served and to escort you, if you're agreeable, to his cabin.'
'Oh,' Ingrid said meekly, 'I forgot.'
'After dinner, he wants you to go to bed. He is concerned,' Hans explained, 'that lack of sleep, combined with the heat, will spoil the trip for you. He's only concerned for your welfare.'
It was clear to Gerry that the facade of concern camouflaged a command – and Ingrid, blushing as if embarrassed that he should witness her subtle subjugation, yet clearly unable to resist the thinly veiled order, thanked him for the drinks and obediently stood up, preparing to follow Hans out of the bar, much to Gerry's disgust.
'Are you sure you don't want another drink?' he asked her.
She blushed an even deeper red, then demurely lowered her eyes. 'Thank you,' she murmured, 'but no.'
Gerry stared steadily at her, willing her to stay and have dinner with him, but she merely smiled wanly at him.
'If I happen to see that guy tomorrow,' Gerry said in defeat, 'I'll check him out for you.'
Hans glanced at Ingrid, his brow furrowed anxiously. 'A… *man*?' he asked.
'It was no one special,' Ingrid said too quickly. 'It was just one of the other passengers, on the top deck… a nice, elderly man… He smiled at me.'
'I trust you didn't smile back.'
'No, I didn't. I promise.'
Hans nodded, relieved. 'Good night, Mr Remick.'
'Oh, sure,' Gerry said, trying to sound laconic. '*Guten nacht.*'
Hans flushed, turned away, held Ingrid's elbow and led her out of the bar,

leaving Gerry not only with a virulent detestation of Wilhelm Zweig, but with an uncomfortable dose of jealousy at the suspicion that there might be something between Ingrid and that handsome, oddly impassive young German who had taken her from him.

Finishing his drink, he got up and left the bar, stood by the railing of the deck outside, and studied the great umbrella of stars that glittered gloriously above the dark desert and whispering black Nile. He was filled with protective love, with the urge to be a knight errant, and although he knew the reason for this, he couldn't really believe it.

Was he in love? Of course not! That wouldn't make any sense. He had simply responded to a kindred soul, to a form of suffering that he recognized, to the fact she, Ingrid, just like him, had lost the parent she most loved. His heart had gone out to her – certainly, that was natural – because of the singular nature of her suffering and the doubts she must live with. That's what it was all about: her tale of woe had stirred up his emotions. He was filled with pity because of what she had told him, and now he felt protective.

Love? He couldn't love her if he tried. That was strictly for the birds.
Yet later that night, sleeping alone in his narrow bed, he dreamed about the rather drab and timid Ingrid Zweig… though the Ingrid in his dream was neither of those, but completely, exquisitely naked… and passionately carnal. He awoke at dawn, wanting her.

Chapter Eight

The first leg of the two-day journey was the cruise from the magnificent rock amphitheatre of Aswan, past darkening granite and sweeping vistas of parched desert, to the *wadi* of Kom Ombo. There, where the ancient ruins of the Roman-Grecian Temple, perched about thirty feet above a bend in the river, rose against a flawless azure sky from yellow sand dunes, green grass and scorched trees, Gerry found himself standing at the boat's railing with Ingrid, aware that he wanted her there – real close, within arm's reach.

'Fantastic, isn't it?' he said.

‘Yes, Gerry, it is.’
‘This is what we came to Egypt to see, right?’ ‘Right, Gerry.’
‘It was dedicated to two deities. The falcon god

Haroeris and the crocodile god Sobek. When we get up there, we’ll see the columns of the hypostyle hall, plus lots of reliefs and carved inscriptions.’

‘You remembered that information from your guide books?’
‘Sure I did. So what? I tend to remember everything I read. And I’m a freak for guide books.’
He quoted a lot from his guide books because it filled the silence brought on by his fear that he might say something too sentimental. He hadn’t been himself all day, and now he felt pleasantly flustered in her presence, his mind filled with soft thoughts. He wanted to say nice things to her, catch her smile, let it warm him, but he didn’t know how to go about it, was too embarrassed to try it. He wasn’t used to feeling this way, couldn’t really believe in it, and found himself skirting around his own emotions like a beginner on ice skates.
‘Anyway,’ he said, covering up for his confusion and wishing he could sort out his emotions, ‘this sure is a sight to see. That’s why I’m surprised that your dad, if he’s so interested, still hasn’t left his posh cabin.’
‘He’s probably seen all this before. He’s been just about everywhere, after all.’
‘Then why did he come here in the first place?’
‘It’s something to do with antiques, I believe. He was hoping to meet someone aboard ship, but I don’t think he has.’
‘How can he, if he doesn’t leave his cabin?’
‘He doesn’t *have* to leave his cabin,’ she replied with a touch of weariness. ‘He gets Hans to do that for him. I know that Hans, apart from keeping his eye on me, is trying to identify the man they’re looking for.’
‘They *don’t know* who they’re looking for?’
‘No. I think they’ve reason to believe he’s on board this boat, but have no way of recognizing him or knowing exactly which of the male passengers is him. They were probably tipped off about him by someone else – possibly another dealer in antiques.’
‘Yeah – *if* it’s antiques. And the man they’re looking for *could* have been the man who was watching you last night – the one who smiled at you. Except,

of course, that he almost hypnotized you, which might make him *too* odd.'
She smiled at that, adjusted the spectacles on her nose, then visibly shivered, looking very confused, and glanced over her shoulder, along the deck, her eyes widening considerably.
'Oh, dear,' she whispered.
Turning around to scan the crowded open deck, Gerry saw who she was looking at. It was a silvery-haired man, unusually handsome for his age and somehow distinguished, gazing at the spectacular ruins above the Nile, his eyes protected by sunglasses.
'That's him,' Ingrid said.
Gerry studied the man carefully, hoping to see something unusual, but seeing only a tall, athletically slim, silvery-haired male who had the air of a born aristocrat and wore clothing to match. A man of means, for sure.
'That guy has money,' Gerry said. 'You can tell just to look at him. He's wealthy and has an air of authority, like he's someone important.'
'He's rather handsome for his age,' Ingrid said. 'A sort of Cary Grant type.'
'Sophisticated.'
'Distinguished.'
'Could be royalty.'
'He's someone important, I'm pretty sure.'
'You betcha,' Gerry said.
However, even as Gerry was offering this agreeable opinion, the unknown man, as if sensing that he was being observed, turned his head quite deliberately to stare first at Ingrid, then, after removing his sunglasses, directly at Gerry, his gaze steady and, even from this distance, clearly intense.
For a moment, a very *strange* moment, Gerry felt that he was going to faint – or, more precisely, that he was falling into a trance – but the feeling passed away as quickly as it had come, leaving him normal once more, if a little confused.
'What the hell…?' he began.
'Yes?' Ingrid said.
'Sorry, I just felt a bit odd there. Felt as if I was going to faint, but it soon passed away. Felt it as soon as that guy looked at me. A really *weird* feeling. What about you?'
'I don't know what you're talking about, Gerry. I felt nothing at all. Maybe you're not used to the heat.'

‘I’m used to the heat, little lady. I can take the heat.’
‘Then maybe you just imagined it, Gerry.’
‘Yeah, maybe you’re right.’
Getting a grip on himself, he shook his head from side to side and looked up again, but the man simply smiled pleasantly at him, almost as if he knew him, then turned away and looked beyond the quay below to where the rustred, crumbling columns of the ancient temple dominated a brilliant sky.
Determined to speak to the man, and assuming that he was about to join the others on the sight-seeing trip, Gerry stuck close to Ingrid when they disembarked and made the short walk along the corniche, past dilapidated tenement buildings, ramshackle stalls and Arab vendors, to the magnificent columns of the ancient temple. But as they mingled with the other sweating tourists in the fierce heat, it soon became obvious that their quarry wasn’t amongst them.
‘He must still be on the boat,’ Ingrid said, her brow furrowed in thought as they stood together near the reliefs in the outer passage of the temple.
‘Right, Ingrid. Obviously.’
‘I mean, the clothes he was wearing,’ Ingrid said, ‘were not the kind of clothes you would wear if going sight-seeing in this heat.’
‘Oh?’
‘He was wearing a suit with shirt and tie.’
‘And polished shoes,’ Gerry said.
‘Exactly,’ Ingrid said.
‘So he’s either in the bar, having a drink and reading a book, or he’s back in his cabin, having a rest.’
‘He certainly looked the sensible type,’ Ingrid said.
‘Not like us,’ Gerry retorted.
Yet despite his joking, he was feeling odd vibrations. Some of these were caused by Ingrid, who was turning him upside down, but the rest had to do with the way she had behaved back on the open deck when she’d again seen the geriatric with the silvery hair and hypnotic eyes. For a brief moment, there, she had seemed like a woman in a trance.
Maybe that man *had* hypnotized her. He had certainly made *Gerry* feel strange. And now Gerry was feeling distinctly nervous, if not for himself, then for Ingrid. That man had clearly been watching them – him and Ingrid – yet so far he’d only been seen on the boat’s upper deck, not anywhere else.

This made Gerry even more uneasy.
He determined to speak to the mystery man the next time he ran into him.
‘The way he smiled at us,’ he now said to Ingrid. ‘That was a tease, a sort of come-on. I don’t know what he’s playing at.’
‘He kind of scares me,’ she confessed.
‘Why?’
‘I don’t know.’
‘I’m going to speak to him the next time we see him. I’ll just ask him what’s cooking. We might be imagining this whole thing, so let’s at least have it out.’
‘That seems sensible, Gerry.’
She didn’t sound like she meant it, but he knew she was just nervous, and this knowledge just made him even more determined to speak to the man.
However, he was soon frustrated again, when, during the subsequent afternoon voyage to Idfu, past cultivated fields, earth-brown shore, Arab women doing their laundry on the muddy banks, and donkeys and cattle drinking from the river, the man was not to be seen anywhere on the boat.
Nor was he to be seen at the noisy Egyptian-style *galabiyeh* party given that evening, to the delight of the many other silvery-haired passengers, most of whom seemed to have more stamina than Gerry and Ingrid.
‘He’s vanished again,’ Gerry said in frustration. ‘He sure as hell must sleep an awful lot.’
‘You think so?’
‘Yeah. I mean, what else could it be?’
‘He might not even be one of the passengers. He might be a ghost.’
‘You believe in ghosts, Ingrid?’
She smiled. ‘I don’t know.’
‘If you ever see a ghost, let me know. I mean, I’m into that subject. In the meantime, I just want a chance to talk to that guy.’
‘He could be dangerous,’ Ingrid said.

Chapter Nine

The following morning, he thought his chance might have come when he saw the man leaning once more on the railing, observing the hungover passengers making their way wearily down the gangplank, en route to an exploration of

the great temple of Horus, at Idfu. But before he could get to him, the man turned away and disappeared through a hatchway; and later, when Gerry looked for him among the many other passengers, as, sweating profusely and rendered featureless in the heat-haze, they swarmed around the massive pharaonic walls, pylons and colonnades of the temple, the man was nowhere to be seen.
'I can't imagine why he's on this boat,' Ingrid said,

squeezing Gerry's hand affectionately as they stood together by the inside wall of the base of an immense pylon, studying the inscribed scene of the marriage celebrations of Horus and Hathor. 'He hasn't been on a single sight-seeing trip yet. He hasn't once left the boat.'

'Neither has your dad,' Gerry responded, leading her up onto the sun roof where the ceremony of the Union with the Solar disc was celebrated. '*He* hasn't been seen since he boarded, so why not our mystery man?'

'My dad's a different cattle of fish. He wouldn't be seen dead with what he deems to be the common riffraff – the paying passengers – and on top of that, he hates coloured people, particularly Arabs.'

'Your dad hates me and I'm white. I mean, that bastard hates *everyone*.'
'Yes,' she agreed, dabbing beads of sweat from her nose, her slim body distorted in the rising heat-waves, a light breeze beating at her. 'That's true enough.'
'At least he's got his sexy blonde mistress. She must make him feel young again.'
'You think Elena's attractive?'
'Yeah. *No*! I mean, she's not *really* attractive. She's just… *sexy* in a sort of… Oh, God, I've just said the wrong thing again.'
'It's alright,' Ingrid said, obviously hurt and trying unsuccessfully to hide the fact. 'I'm sure most men would respond the same way. She has that effect on them.'
'Not on me,' Gerry said unconvincingly as they left the great hypostyle hall, stepped into the scorching sunlight, and crossed the dust-blown colonnaded forecourt, passing other tourists and Arab guides. 'I didn't mean it that way. I

mean, she's sexy in a sort of whorish way. Not my type at all.'
'Oh? So what's your type?'
'The quiet type. The modest type. I like my girls to be modest in speech and dress, as well as slim, just like you.'
'Is that some kind of compliment?'
'I only deal in facts. But why am *I* being grilled? What about that handsome bastard, Hans Mayer? The ski instructor who fancies you.'
'He's not a ski instructor and he doesn't fancy me, Gerry. He's simply my dad's personal assistant and has to keep his eye on me.'
'Why?'
'Because my dad is concerned about who I talk to – which is why Hans is watching us right now.'
Gerry *was* aware of the fact that everywhere he and Ingrid had been together, Hans had been there as well, keeping a discreet distance away but rarely losing sight of them. Now, when he glanced past the soaring colonnades of the great temple, he saw that same handsome German, his blond hair windblown, turning away to gaze with studied attention at the river flowing thirty feet below them, past fields of green sugar cane and parched, dusty soil.
'Son of a bitch!'
'Pardon?' Ingrid said.
'I'm starting to feel that we're being watched by everyone.'
'You look funny when you're angry.'
'I'm not angry. I'm just annoyed. And I really want to talk to that mystery man before he gets on my nerves.'
In the event, their mystery man *did* materialize again, early that evening, shortly after the boat had stopped at the riverbank farming village of Isna and was passing through the lock, prior to cruising farther downstream to Luxor. Gerry was leaning beside Ingrid on the railing of the open deck, looking down on the palm-fringed village with its peeling, red-rust walls, its many camels and heaps of sugar cane, when again he felt as if he was about to faint, or, perhaps, fall into a trance.
Recovering quickly, but impelled by an inexplicable conviction, he glanced back over his shoulder, through the panoramic window of the bar… and saw their mystery man seated at one of the tables inside, his sunglasses resting on the table, his intense gaze and enigmatic smile disturbingly clear.

Startled that he had so strongly sensed the presence of the man staring at him, Gerry took a deep breath, squeezed Ingrid's hand, and said, 'To hell with the lock. Let's go and speak to that guy.'
'I don't want to,' Ingrid said.
'We have to,' Gerry insisted, and then, lying deliberately, added: 'At least to reassure ourselves that he's perfectly normal.'
He wasn't too sure if the mystery man *was* perfectly normal; nevertheless, he practically dragged a reluctant Ingrid into the bar.

Chapter Ten

Deciding to get it over with as soon as possible, while he still had the courage, which he surely now needed, Gerry ordered both of them a drink – the Nubian *Karkade* for Ingrid, a Stella beer for himself – then, after a rather theatrical study of the general area, which was otherwise empty, nodded casually at the silvery-haired man seated at one of the tables and said, 'Hi. Do you mind if we join you? You seem all alone there.'
'One is never alone in Egypt,' the man replied in a

velvety tone of voice. 'The whole of human history is here… But, yes, please do join me.'

Taking a chair at the low table, directly opposite his quarry and with an uneasy Ingrid between them, Gerry was relieved to note that up close the man, handsome, suntanned, wearing immaculate white shirt, black trousers and shoes, seemed perfectly normal, other than having a youthfulness belied by his silvery hair and possessing an unusually steady grey gaze.

The man placed his gin and tonic back on the table, then offered his right hand.
'Saint-Germain,' he said softly. '*Count* SaintGermain.'
The quiet pomposity of the introduction, as well as the anachronistic nature of the title, took Gerry by surprise. He was also confused, as he repeated the name in his head, by his conviction that he had heard of it before, though didn't know where or when.
'A *count*?' he said, taking hold of that outstretched hand and observing that

there were no rings on its fine fingers. ‘I’m common Gerry Remick, from New York City, and my friend here is Ingrid Zweig.’
‘You are German, of course,’ the Count said, holding Ingrid’s hand lightly in his own, as if weighing it, or about to kiss it. ‘I myself am of German descent – my family originated in Freiburg – but I haven’t actually resided there in years.’
‘Where *do* you live?’ Ingrid asked.
‘Here, there and everywhere,’ the Count said, releasing her hand and indicating the world outside the panoramic window. ‘I have travelled much in my lifetime.’
‘For work,’ Gerry asked, ‘or pleasure?’
‘A little of both,’ the Count replied, without being more specific, then he studied Ingrid with a rather odd intensity. Eventually, as if the silence had made him realize what he was doing, he offered a wintry smile. ‘You are travelling together?’ he asked.
‘No,’ Gerry said. ‘We just met here on the boat. I’m travelling alone, but Ingrid’s with her father and some other friends.’
‘Ah, yes, Herr Zweig. I think I saw him when you were all coming aboard, but have not seen him since.’
‘He’s like you. He doesn’t leave his cabin much.’
Saint-Germain feigned surprise by raising one fine eyebrow. ‘Me?’ he said. ‘But I’m hardly *ever* in my cabin. I love the scenery so much.’
‘Oh, yeah?’ Gerry said, trying to sound casually conversational. ‘Well, I’ve seen you on deck a couple of times, though not on any sight-seeing trips.’
‘Yes, I suppose you’re right. But then I’ve taken this cruise so many times and now sight-seeing exhausts me. So I’m happy just to wander around the boat and watch history drift past me.’
Talking of which, the boat had left the village of Isna well behind and was now heading downstream, towards Luxor, as the sun began sinking over the sand and crags of Gebelein, with the palm trees shading into silhouette, as still and solemn as monks in prayer.
Saint-Germain smiled and pointed, indicating the exotic world outside, then had another sip of his drink and put the glass down again.
‘So,’ he said, smiling with icy charm at Ingrid, ‘I am happy to remain on board the boat and watch the ancient world drift past – just like your father, Herr Zweig.’

Ingrid twitched at the mere mention of her father's name; then blushed and lowered her eyes. 'I doubt that he's even doing that,' she said. 'He just likes his privacy.'
'Ah, yes,' Saint-Germain replied, 'that is understandable. I have read about him in the newspapers. He is a man of great power and heavy responsibilities, so doubtless needs to have his solitude. However, why come on a cruise such as this just to hide in your cabin?'
Ingrid shrugged. 'I don't know.'
Saint-Germain, Gerry noted, was staring at Ingrid with veiled intensity, as if willing her to raise her eyes and look at him – which, to Gerry's amazement, she soon did.
'I have read that your father is a collector of precious antiques,' the Count said in a measured manner, 'so perhaps he has come on this cruise in search of some more.'
'Yes,' Ingrid replied. 'Maybe. In fact, I think so. I mean, I think he was meant to meet someone on board, though I'm not too sure why. What you say could explain it.'
Saint-Germain looked sceptical. 'We have an *antique* dealer on board?'
'I don't know,' Ingrid replied. 'I don't even know if such a meeting was arranged. I only know that he was hoping to find *someone* on this boat, though I haven't a clue who it is, nor why my father wants to find him.'
'And you, Gerry?' Saint-Germain asked. 'What brings *you* on this cruse? Study or pleasure?'
He had a smoothly modulated, slightly theatrical tone of voice that could certainly have suited a mesmerist – and that, plus the fact that his gaze was *too* steady, was starting to convince Gerry that there *was* something distinctly odd about him.
'A bit of both,' he found himself replying, reluctant to offer the Count too much information about himself, but strangely unable to stop himself from doing so. 'I have an interest in ancient mythology, unexplained phenomena in general, and, in particular, the rumoured magical properties of the Great Pyramid of Giza, so the main purpose of this voyage is to see that.'
'Do you *really* believe the Great Pyramid has magical properties?'
'I think it might have. I'm especially interested in the fact that the Great Pyramid, widely reported as a flawless structure, *isn't* a perfect pyramid, since its tip, the *real* tip, is actually missing.'

‘*Missing*?’ the Count echoed, his eyebrows raised.
‘Well,’ Gerry said, helplessly warming to his favourite subject, ‘it *has* been reported by various explorers over the past couple of thousand years that the final stone course below the summit of the pyramid is not, in fact, there.’
‘And you believe this?’
‘Sure. And I’m not alone in believing that the original tip of the pyramid was once in place, but was of a very different material from the rest of the pyramid – a material so rare and valuable that it was removed, way back in the distant past, before the original marble facing on the lower pyramid was stripped to provide stone for Cairo.’
‘And what size was this rumoured missing apex?’
‘About five inches from base to tip. A *miniature* pyramid.’
‘Very good, Gerry,’ Count Saint-Germain said. ‘*Very* good.’ He then leaned farther over the table and stared steadily at Gerry, making him feel drained and unreal. ‘So what else do you know about the Great Pyramid?’ he asked.
Gazing directly into Saint-Germain’s mesmeric eyes, Gerry realized that he didn’t want to speak to him anymore, but for some reason or other could not resist him. He felt wide awake, fully conscious and alert, but something inside him had been paralysed, leaving him helpless. The Count wanted him to talk, and he knew that he *would* talk, irrespective of his own wishes, yet even as he grasped this frightening fact, he heard himself speaking.
‘I know,’ he said, ‘that the sides of the Great Pyramid are orientated precisely to face the four points of the compass, which suggests that it’s an instrument of astrology; that geographically speaking it stands at the centre of Egypt, at a place which has also been accepted widely as the centre of the terrestrial world; and that its dimensions, when analysed, have convinced many that it’s not *just* a tomb or pharaonic toy, but something possibly constructed as a link between Earth and the cosmos. And I believe that the missing tip of the Great Pyramid – the smaller, flawless pyramid – is possibly the magical key to the Great Pyramid’s nature.’
Having completed what he wanted to say, he found himself slumping back into his chair, unnaturally exhausted. He also noticed, before managing to turn his heavy eyes back on the mysterious Count Saint-Germain, that Ingrid, seated beside him, was looking distinctly dazed.
There was a slightly mocking smile on the ageless face of Saint-Germain; then Gerry felt those hypnotic eyes starting to release him as that mellow,

seductive voice resounded with an eerily unreal resonance.
‘You may be right,’ the Count said, pushing his chair back and standing upright, clearly preparing to leave the bar. ‘But *why* is the tip of the Great Pyramid missing? Who took it? To where? These, my friend, are some of the age’s great questions… and only a few know the answers.’
He waved his right hand slightly, across Gerry’s line of vision, and as he did so, Gerry felt himself emerging from what had seemed like a dream. Blinking repeatedly, licking lips that were too dry, he just about managed to get back his willpower as Saint-Germain’s voice, as mesmeric as a swinging pendulum, crooned, ‘Goodnight, my young friends.’
He was about to leave the bar when Gerry, on an impulse and feeling normal again, said, ‘I appreciate that you could read about Ingrid’s father in the newspapers, but how did you know it was him when he boarded the boat with the rest of us?’
Saint-Germain stopped walking, turned back, stared down coolly, then, as if having second thoughts, offered a slight, chilly smile.
‘One recognizes power when one sees it,’ he said. ‘And Herr Zweig, without any shadow of doubt, exudes that kind of power. One recognizes one’s own kind, my young friend. Now goodnight… and *auf wiedersehen*.’
So saying, he smiled again and then spun on the ball of one foot and walked out of the bar, leaving Gerry drained and exhausted, not too sure of his sanity.
Taking a deep breath, trying to control his racing heart, he glanced through the window at the starlit sky outside, the great moon above Egypt, the palm trees silhouetted where the desert met the Nile – then he focused on Ingrid.
She rubbed her cheek with her hand, turned dazed eyes upon him, then said with a sigh of bewilderment, ‘What was all that about?’
‘Don’t insist on an answer,’ Gerry replied. ‘I wouldn’t know what to say. Come on, let’s get out of here.’
Not giving her time to disagree, he took hold of her hand, tugged her to her feet, then led her out of the bar, into the fresh air. The sky was lustrous with stars, the desert gilded by moonlight, and the silence of the night had its own resonance, a magical quivering. He took a deep breath, looked down at the black river, faced Ingrid and felt a great fear rising up from his depths.
She was staring sombrely at him, as if trying to read his mind, and he saw in the plain lines of her face the beauty waiting to spring forth. He wanted to encourage that, to release her from the past, but he felt too confused by the

present.
Who was Saint-Germain? And what did he really want? Was his interest in Ingrid or in her father? Was it friendly or dangerous?
Such questions had no answers, but they shook him leaf and bough, making him step closer to Ingrid, his hands reaching out to her. He touched her, stroked her shoulders, explored her spine and pulled her to him; he saw her eyes close, tasted the sweetness of her lips, and was flooded with love for her. He felt that he was tumbling down through himself, into waves of pure feeling.
Alas, it didn't last long. She was too shy to linger. She kissed him once, pressed against him, let him feel her beating heart, then turned away and hurried along the deck, disappearing indoors. He watched her go, saying nothing, in a trance of delight and trepidation; then took hold of the railing and raised his face to the wind, his eyes and ears closed to the streaming night, his body turned to pure flame.
He stood there for a very long time, aware of nothing but Ingrid's face.

Chapter Eleven

He had trouble sleeping that night. Torn between sleep and waking, between sensual visions of Ingrid and nightmarish thoughts about Saint-Germain, wondering if he had been hypnotized, if he had hallucinated the whole thing, he tossed and turned for hours, hearing the humming air conditioner, his thoughts in a state of chaos, then eventually groaned aloud and slipped out of bed to stare through the porthole window.

It was just before dawn and a thin blade of crimson fire was spreading along the dark horizon as the boat headed for the East Bank of the Nile, the water reflecting faint stars and a pale, undulating moon.

Arousing himself from his sleepless stupor, dressing quickly and carelessly, he left his cabin and went out to observe the sun rising over the desert. Emerging onto the deck, he was slapped by a chill breeze that instantly made him feel more awake. Stepping up to the deck's railing, he looked out to where the Nile met the desert sands. The blade of crimson light was brightening, turning purple, then faintly golden, spreading out across the sky

to dissolve the stars as the rim of the sun appeared.

He was surprised to find himself alone on the deck at this time, the only one to view this moving spectacle. But then, when he thought of his restless night in his narrow bed, of his shifting through dream and memory and intangible fears, he also recalled that he had been strangely reluctant to open his eyes, and had, indeed, at one point, just before finally rising, been convinced that an ominous, bass humming sound – not the boat's engines or the air conditioning – had seemed to *physically* press him back down.

Now released from that odd sensation and feeling more normal, he watched the rising sun, a pulsating gold-andpurple crescent, taking shape as it ascended, and thought of his conversation the previous evening with the very strange Count Saint-Germain, who had made him and Ingrid feel dazed. Then, just as the sun was breaking away from the horizon to resemble boiling lava being poured over the desert sands, he heard the bass humming sound again, felt something pressing him from behind – an indefinable, pulsating pressure against the back of his legs and spine – and reluctantly turned away from the spectacular sunrise to check what was happening.

The instant he turned around, the feeling of pressure went away, but he saw, at the far end of the open deck, just above the tops of the superstructure housing the passenger cabins, a pulsating white light that flared up with a soft whooshing sound, then abruptly shrank and disappeared into the east.

Momentarily stunned, then feeling wildly excited, he padded quietly along the deck and saw the mysterious Count Saint-Germain standing silently at the railing and looking intently towards the east, before waving one hand, as if in languid farewell, and then turning away to enter a passageway that led through to the starboard deck.

Glancing to the east, Gerry saw only the brightening empty sky, so he hurriedly followed Saint-Germain into the passageway and went through to the starboard deck, assuming he would see Saint-Germain there, but failing to do so.

Saint-Germain had vanished.

‘Jesus Christ!’ Gerry whispered to himself.

Chapter Twelve

Determined to find the missing Count Saint-Germain, Gerry prowled the boat restlessly as the sun rose majestically over the golden sands of the desert, as the other passengers crept from their beds and the boat anchored against the East Bank, as breakfast was served and Ingrid entered the restaurant, and her smile, as warm as that of a bashful child, made him glow with unwarranted pride.

‘I’ve looked all over the boat,’ he told Ingrid, ‘but that bastard’s just vanished.’
‘I hope he vanishes forever,’ Ingrid responded. ‘He gave me the shivers.’
‘He hypnotized you,’ Gerry said.
‘And what about you?’
‘I’m not easily hypnotized,’ he lied shamelessly. ‘I have a lot of willpower.’
Ingrid put two cubes of sugar into her white coffee and stirred it in a desultory manner while gazing out through the rectangular window at the palm trees on the high banks of this narrow part of the Nile, their webbed leaves drooping over parched soil and the muddy-brown river.
‘You shouldn’t do that,’ Gerry said.
‘What?’
‘You shouldn’t put that sugar in your coffee,’ he said. ‘In fact, you shouldn’t take sugar at all, let alone put milk in your coffee, let alone drink coffee in the first place. Coffee, milk and sugar are bad for you. That’s why you don’t look so good.’
‘Oh,’ she responded, looking down at her cup of coffee, then taking the spoon out and laying it on the saucer. ‘I didn’t know that. I see.’
‘Oh, shit!’ he said, knowing he’d done it again. ‘Christ, I didn’t mean *that*! I mean, you look real good, real attractive, but your colour’s a bit off. It’s not your *appearance* – you’re just not *healthy* – you don’t look after yourself. Here, have a fresh orange.’
Feeling really tactless, he peeled the orange for her, broke it into slices, then placed the slices neatly on a plate and handed it to her. She accepted with a wan smile, slipped a slice into her mouth, chewed it with no sign of

appreciation, then looked sad again.
‘What do you most want at this very moment?’ she finally asked him.
‘I want to find that mysterious Count Saint-Germain and have a good talk with him.’
‘And that’s all?’
‘That’s all.’
‘Well,’ Ingrid said, looking so crestfallen that he instantly realized he should have said it was *her* he most wanted at this very moment, ‘you’d better find him fairly quickly, because we only have a few days left on the boat, then we’ll all be in Cairo to go our separate ways. Not everyone on this boat is booked into the hotel in Cairo, so Saint-Germain may not remain with this group any longer than that.’
‘Yeah,’ Gerry said, ‘I know. I mean, thanks for the thought. It’s just that I’ll go crazy if he disappears before we can talk more.’
‘Why not go and see the purser?’ Ingrid suggested helpfully. ‘He’ll have the names of the passengers going on this latest sight-seeing trip, so we can check in advance if Saint-Germain will be going with us. In fact, he’ll also have the names of all the passengers on the boat, so we can check if Saint-Germain is actually travelling under his own name.’
‘What a bright girl you are,’ Gerry said. ‘Come on, let’s get to it.’
Excited again, and pleased because she was so bright, he rushed with her to the purser’s office to check the passenger list.
Saint-Germain was not listed as a passenger; nor was he named on the list of those booked for the sight-seeing tour.
While this could have meant that the mysterious Count was travelling under a pseudonym, neither the purser nor any of the stewards could confirm from his description whether or not they knew the silvery-haired gentleman, as distinct from the many other geriatrics on board.
‘That name of his, or that pseudonym, rings a bell,’ Gerry said. ‘I just can’t place it at the moment. But I know it. I’m *sure* I do.’
‘It’s a town just outside Paris,’ Ingrid informed him.
‘Really?’
‘Really.’
‘Well, apart from that,’ Gerry insisted, ‘the name definitely rings a bell in my head and it’s driving me nuts trying to remember why. Saint-Germain, Saint-Germain, Saint-Germain… It’ll come to me eventually. It’s *got* to come. God

damn it, where *is* he?'
Already disorientated by his rapidly growing love for Ingrid, he was further excited and confused by his sole encounter with Count Saint-Germain – which he was increasingly convinced had been an hypnotic experience – as well as by the eerie experience on the deck in the dreamy light of dawn.
'Anyway,' Ingrid said, sounding marginally less timid, 'I don't know why you're making such a fuss about that man. Even if he *was* some kind of hypnotist – so what? He's probably in show business, or something. There's nothing *strange* about hypnotists.'
'There's something strange about *this* one,' Gerry insisted. 'And when I tell you what I witnessed this morning, you just might believe me.'
However, when he recounted what he had seen on the port deck of the boat earlier in the morning, Ingrid merely removed her sunglasses, stared thoughtfully at him, smiled, and said, 'So? The man was out for a morning stroll. What's so strange about that?'
'Didn't you hear me?' Gerry said, outraged that she was doubting him. 'There was a really weird, pulsating light – and strange noises as well – then, whatever that thing was, it flew away to the east and just blinked out. And when I arrived at the scene, Saint-Germain seemed to be *waving goodbye* to it.'
'He was probably just waving at a bird.'
'Jesus Christ, Ingrid! *Really*!'
Yet he knew that her reaction was a perfectly natural one; and that what he had seen, if not an hallucination, was something so out of the ordinary that it defied rational thought. He tried applying rational thought, became even more deeply confused, even slightly awestruck, but then gave in to a mounting excitement and burning curiosity, which, while setting fire to his imagination, made him fearful for Ingrid.

Chapter Thirteen

If anything, his intoxication and bewilderment over what had occurred were only strengthening his emotional bonds to her; and so he kept her close by him, perhaps also out of fear, throughout the rest of the day, pleased that Zweig had remained in his cabin with his blonde whore, Elena.

‘What does your dad *do* all day?’ he asked Ingrid as they prepared to disembark and take another bus through the hellish noonday sunlight, choking dust and hordes of babbling, furiously importuning, Arab touts. ‘I mean, even that Elena can’t… Well, *you* know! Not *all day*, they can’t!’

Ingrid actually giggled at that, leaning against him as they descended the gangplank. ‘Why not?’ she said. ‘All things are possible. While some things are more gross than others, they’re not actually *impossible*.’

He helped her off the gangplank, wiped dust from her face. ‘You’re really pretty attractive,’ he said. ‘I mean, I like you a lot.’

She lowered her eyes demurely. ‘That’s nice,’ she whispered. ‘I like you a lot, as well, Gerry. You’ve made me feel much better.’

‘Really?’
‘Yes, really.’
‘Let’s catch that tour bus,’ he said.
‘Yes, of course.’
‘I’m real good-looking as well,’ he told her, ‘but you

don’t have to say so.’

He helped her up into the crowded tour bus and sat beside her near the back, squeezing her hand now and then as the battered vehicle coughed into life, then bumped and rattled its way toward more of the glorious ruins of ancient Egypt.

Saint-Germain was, however, still haunting him and wouldn’t let him go, and thus, during this particularly hectic day on the Nile, as they were rushed with the other passengers through the sight-seeing tour, he did not give Luxor and Karnak the attention he had thought he would, since one half of him was drowning in a sea of emotion over Ingrid, while the rest of him, instead of focusing on the glories of the Valley of Kings and Queens, or the fabulous Temple of Karnak, was agog only with the expectation of once more catching a glimpse of that elusive gentleman.

In the tomb of Tutankhamen, in the great temples of Karnak – walking past the rams' heads of the Avenue of Sphinxes; surrounded by the colossal statues and Osiride pillars of the temple of Rameses III; overwhelmed by the hypostyle hall with its forest of soaring, time-warped columns; standing in the haunting silence of the ruined houses of the Sacred Lake – in all of those wondrous places, which for years he had wanted to see, he saw only the wounded eyes of Ingrid Zweig and felt the *presence* of Saint-Germain.

'It's as if he's watching us,' he said to Ingrid as, close together, they studied the carved head of Hathor, the goddess of music, love, fertility and dancing, located above the entrance to Queen Hatshepsut's temple in the Valley of Queens. 'I can't see the bastard anywhere, but I'm convinced he's watching us.'

'He's not,' Ingrid replied, taking his hand and leading him to the chapel dedicated to the underworld god, Anubis. 'Now it's *you* who's imagining things. We weren't hypnotized – we were just tired. All the rest you've invented.'

'I didn't invent what I saw on the deck of the boat this morning.'
'And what did you actually see?' she asked as they left the protective shadows of the colonnade, felt the fierce heat of the sun, and squinted up through their sunglasses at the awesome cliffs of Deir-el-Nahri. 'You saw a flash of light – which could have been anything – and a perfectly normal human being taking his morning stroll.'
'That light was some kind of UFO!'
Ingrid smiled. 'Maybe so. But then you didn't really see too much at all – it was gone before you could blink.'
'Pull your hat down,' he said, outraged, changing the subject. 'You're going to get your nose burnt. You should always put cream on your nose – and on your face and arms, too. You've got delicate skin. It's not used to the heat. You should learn to look after yourself better, particularly when travelling.'
He knew what he had seen, and was excited and frightened by it – excited by its magical nature, frightened by what it could imply, wondering why Saint-Germain was so interested in Ingrid's father, concerned that Ingrid might be endangered because of it.

Pressed pleasantly close to her in the milling throng of fellow tourists, blinded by the shimmering white light of midday, drained by the blue-lighted humidity of the afternoon, he was totally disorientated by physical exhaustion and his burgeoning love.
‘I hardly know where I am,’ he said to Ingrid. ‘I might as well be in bed.’
‘I’m glad you’re not,’ she replied. ‘I wouldn’t have enjoyed any of this without you. I’d probably have stayed in my cabin.’
‘Really?’
‘Yes, really.’
She blushed and then sighed, carefully avoiding his gaze, and he felt his spirit turning in the breeze to fall protectively over her.
‘You’re real cute,’ he managed to say when they returned to the town of Luxor and were wandering, hand in hand, through the packed bazaar in the deepening violet light of the early evening. ‘I mean, you *could* do something about your appearance, but apart from that, you’re really pretty attractive. I mean, more than you know – you know?’
It may not have been a compliment, but *he* thought it was; and later that evening, when the violet glow had turned into starlit darkness, when the *son et lumière* spectacle brought Karnak to magical life, when the light and sound washed over him, taking him back to ancient Egypt, to the heart of the mysteries that so enthralled him, he turned Ingrid in to him, tugged her close, held her tightly, saw himself reflected dimly in the dark, clip-on lenses of her thick-rimmed spectacles, in her brimming tears, and said, ‘What about when we get to Cairo?’
‘It’s alright,’ she replied, her tears magnified by the spectacles, her eyes blinking repeatedly in love’s sweet confusion. ‘Don’t worry about my father or Hans. We’ll be in the same hotel, so no matter what they say, I’ll see you there. I promise. *I swear it*!’
He wanted to kiss her trembling lips, to loosen her pinned-up hair, to remove her thick-rimmed spectacles and clothes and then make tender love to her, but he could only squeeze her hand, feeling foolish, almost childish, and parted from her on the boat’s top deck, under the starlit sky.

Chapter Fourteen

When Ingrid had departed, Gerry went to the boat’s stern, his soul filling up

with feeling, with the mystery and magic of this singular time and place, and stood there a long time, until midnight, until the deck was deserted and only the pale moon moved.

Suddenly, he went cold, sensing something, *feeling* something, and eventually heard that sound – the faintly familiar, bass humming sound – and then saw the same pulsating white light beyond the last of the cabins.

Feeling a hot flush of excitement, but also the chill of fear, he took a deep breath, muttered, ‘Jesus, here goes!’ and then padded as quietly as possible along the empty deck and turned left, between two blocks of cabins.

Reaching the other side, he remained hidden by the cabin bulwark, hearing the bass humming sound, feeling an odd, unnatural pressure, and staring out at the pulsating white light that fell over the starboard deck.

The unnatural pressure kept tugging at him, the bass humming sound continued… then he heard the soft murmur of two voices farther along the deck, obviously coming from roughly the same area as the strange light and noise.

With his heart racing fearfully, but unable to control himself, he inched along the cabin bulwark, took a deep breath, and carefully peered out.

At first he was almost blinded by the fierce, striated light; but then his eyes adjusted to it and he saw two human males silhouetted in a white haze that seemed to emanate from the disc-shaped light source hovering magically beyond them.

He stared, mesmerized, not understanding what he was seeing, his senses being upturned by that relentless, bass humming sound, while the disc-shaped white light, blindingly brilliant, pulsating rhythmically, threatened to draw him out from where he was hiding and suck him towards it.

Resisting that force, releasing his breath and rubbing his stinging eyes, he looked out again as the talking men moved a little, as the light around them dimmed and seemed to move farther back, and the men, both wearing normal

suits, became recognizable.

One of them was the silvery-haired gentleman who called himself Saint-Germain.
For a moment, Gerry couldn't quite see the other man, but then the man nodded at Saint-German, stepped out of the distorting haze, and walked away… straight into that hovering, disc-shaped light source, where he turned back to face Saint-Germain.
The man raised his right hand in a gesture of farewell – and at that precise moment, as the light flared up around him with a sudden whooshing sound, briefly illuminating his features, Gerry saw with stunning clarity, even from that distance, a pair of wintry-grey, almost silvery eyes and a dangerously seductive smile, which, with that slightly inhuman, mesmeric gaze, made the man appear to be strangely ageless and unreal.
Stunned and shocked, caught in a sudden seizure of unnatural, overwhelming desire for that distant man, Gerry was about to step out from the protection of the bulwark when the light flared up even more, pulsating and swirling around that haunting prince of darkness, then seemed to dissolve him where he stood in its prismatic brilliance.
Abruptly, with another whooshing sound, the light raced away at startling speed, into the distance, until it was no more than a pinprick, another star in the heavenly vaults, which, after flaring up one last time, blinked off completely… leaving nothing but the majestic, star-filled sky and its vast umbrella of silence.
Sweating and shaking, dazed and disorientated, Gerry took another deep breath, released it slowly, then glanced around the edge of the bulwark, to where the two men had been, and saw Saint-Germain, all alone in the moonlight, walking casually along the deck and turning the corner at the far end, for all the world like a perfectly normal passenger out for a midnight stroll.
Gerry didn't attempt to follow him. He knew that he wouldn't find him. Instead, he tried to control his breathing, to still his helpless shaking, then slid down the bulwark until his backside touched the deck, and just sat there, holding his head in his sweaty hands, staring across the black ribbon of the Nile to ancient Egypt's eternal night.

Chapter Fifteen

When Ingrid entered her father's cabin suite, Zweig was propped up on the bed, supported by a lot of pillows, his flushed, humourless face framed by the pillows and porthole windows on either side, both of which showed the spires and minarets of Cairo as the boat slowly approached its docking bay alongside the corniche.

Zweig was naked, his pendulous breasts sagging, but a rumpled white sheet was covering his loins and thighs, and was itself covered in the newspapers of many different countries. Balanced precariously on his lap was a tray on which stood the emptied pint glass for his health drink and the numerous small bottles containing his vitamin, rejuvenation and other tablets.

'Good morning,' he said without warmth as she entered. 'I'm sorry I haven't been able to see you over the past couple of days, but as you can see' – and here he indicated the newspapers – 'I've been very busy. A man's work is never done.'

Elena, hearing that one, chuckled falsely and winked at Ingrid. 'He puts his heart and soul into his labours,' she said, 'and that's something I can say without doubt.'

Ingrid blushed and lowered her eyes, but not before noting that while her father was naked in his untidy bed, Elena had already prepared herself for disembarkation, and, as she adjusted her figure-hugging jeans and shirt, which clearly were too tight for her, she gazed balefully at the Filipino steward who was packing the suitcases.

'I can't wait to get to the hotel,' Elena said. 'I'm sick to death of this creaking crate.'
'You should have taken advantage of the sun-deck and swimming pool,' Zweig reprimanded her, 'instead of staying cooped up here with me.'
'I had to keep you warm in bed,' Elena replied. 'I'm a *masseuse*, after all.'
Ingrid lowered her eyes again when her father offered a mocking smile; she looked up when her secret friend, Hans, handsome and immaculate in white

shirt, shorts and knee-high socks, stepped forward to remove the tray from her father's lap and hand him his dressing gown.
'We'll be docking any minute,' he said. 'You better have your shower now.'
'I don't *need* a shower,' Zweig retorted. 'I will therefore have my little chat with my daughter before dressing myself. So, Ingrid,' he continued, taking the dressing gown from Hans, but forgetting to put it on, 'I note that you have a pleasantly sunburnt face. Obviously you've been out and about.'
'Yes, Father,' she said, trying not to sound so humble in his presence, wishing Gerry was here by her side.
'So?'
'Pardon, Father?'
'*Where* have you been, you stupid child? And what have you been up to?'
'I've just been on a few sight-seeing trips, Father.'
'Were you alone on those trips?'
'They were all organized trips. I went on buses with a lot of other passengers.'
'You weary me, my child. Why do you lie so shamelessly?'
'Lie? I don't – '
'You were not *just* with other passengers. You made most of those trips with a particular individual.'
She knew there was little point in denying it, since Hans had, after all, followed her and Gerry on most of their trips together. Still, she was filled with woe because her father had raised the subject, knowing only too well the kind of humiliation that would soon come her way.
'Well, yes,' she began, almost stuttering, 'it *is* true that a certain person – '
'Hans informs me,' her father interjected, 'that you've been seeing the young American with whom I had an unpleasant altercation when boarding this boat.'
'He didn't mean to be offensive, Father. He just has a kind of American brashness of the kind we're not used to.'
'Another member of the great unwashed,' her father said. 'So why is he being so friendly with *you*?'
'I think he just… *likes* me.'
'Are you suggesting a romantic interest?'
'No, Father, I – '
'I should hope not, my child, since it is clear that such a worldly young man

would find little of interest in *you*, romantically, sexually, or otherwise.'
She tried desperately to conceal her humiliation, but couldn't stop the burning of her cheeks.
'I take it that you and the American have not yet…?'
'No, Father! Of course not!'
'Good,' Zweig said. 'Particularly since, after all, you and him can have little in common.'
Though she didn't respond, she felt a slight touch of anger. Having previously felt only fear in her father's presence, the flash of anger surprised her.
Staring steadily at her, his gelid gaze unrelenting, Zweig held the dressing gown out in Elena's direction, indicating that he wanted her, his slave, to help him into it.
'I would normally be embarrassed to stand naked in front of my daughter,' he said as Elena removed the dressing gown from his big hands, 'but since she has finally become *involved* with a member of the opposite sex, I can assume that nothing she will see will shock her. Is that not so, Ingrid?'
Aware that she was being mocked, Ingrid couldn't hide her blushing, but she also felt the rise of unfamiliar resentment and that new, simmering rage. Surprised by the growth of these more positive feelings, and understanding that they were caused by her father's contempt for her and Gerry, she willed herself not to cry, to keep her gaze as steady as possible, and loosened the fists clenched by her sides, letting the air cool her sweating hands.
If she could not prevent him from being so crass in her presence, she could at least deprive him of the satisfaction of seeing her pain.
'I really don't know what you're talking about,' she said, 'but please don't mind my ignorance.'
He raised his bushy eyebrows, clearly taken aback by her mild display of sarcasm, offered her a slight, icy smile, then deliberately flipped the sheet off his white, wrinkled body.
'Good,' he said. '*Sehr gut*!'
She tried not to see too much when he swung his treetrunk legs off the bed, stood upright with some difficulty, then stretched his arms out to let Elena drape the dressing gown around him. When she had done so, he tied the belt and turned back to Ingrid.
'So,' he said, 'what did you talk about?'

‘Pardon?’
‘The *American*,’ he emphasized with ill-concealed impatience. ‘Since you and he have little in common, what did you talk about?’
‘*Talk* about?’ she replied, trying to avoid the issue. ‘I don’t know what you mean.’
‘I know you’re not the most vocal of creatures, *mein Fraülein*, but even *you* must have talked about *something* with your dishevelled young man, And whatever it was, it could be important, so please tell me about it.’
‘*Important*? To *you*?’
‘You sound like a tape-recording,’ he sneered, ‘repeating my words. Please don’t do that – it grates on my nerves… and you know what that can lead to.’
Indeed, she did – and Hans’ warning glance confirmed it. Her father’s annoyance could lead to swinging fists and the blue sheen of bruised flesh, most notably, in a case such as this, that of Hans or herself.
‘Nothing much,’ she said cagily. ‘I mean, nothing in particular. He’s passionately interested in ancient Egypt, so he talked about that. He knows an awful lot about the country in general and the pyramids in particular.’
‘That hardly explains his interest in *you*,’ her father said, obviously still convinced that no member of the opposite sex could possibly like her for her own sake. ‘I mean, what did he *want*?’
‘I don’t think he wanted anything, Father, other than company.’
‘*Your* company?’
‘Yes, I suppose so.’
Zweig sighed again, snapped his fingers at Hans, said, ‘Get me a glass of champagne. I can’t stand this nonsense without it.’
‘I’ll have a glass as well,’ Elena said. ‘My throat’s as dry as the ass of a camel.’
‘And your tongue is as foul as camel dung. I sometimes wonder how I tolerate you. Hans, fetch the champagne.’
While Hans rushed to do as he had been bidden, Zweig placed his hand on Elena’s shapely backside, gave it a squeeze, then took a deep breath, stretched himself and stared again at Ingrid.
‘The young gentleman wanted your company and you thought this was *normal*?’
‘Well, I…’
‘I do *not* think it normal. It simply doesn’t make sense. I have observed you

carefully, from your adolescence onward, and I cannot think of a single occasion when a male person wanted *you*, rather than an introduction to me through you – ’
‘I think – ’
‘ – so I’m sure that this young man, the American, had ulterior motives for treating you so kindly… Did he ask about me?’
‘No, Father. When I happened to mention your name, he certainly knew who you were – he’d read about you in newspapers and seen you on TV – but apart from that, he didn’t talk about you.’
Zweig actually looked disappointed. ‘So what’s his primary interest in Egypt?’
Ingrid shrugged. ‘Most of Egypt, really. I think he’s particularly interested in the pyramids, especially the Great Pyramid of Cheops, at Giza, the one he wants to take me to see tomorrow.’
Her father changed when she said that: his cold eyes went out of focus. He glanced blindly about him, as if he had just received some unpleasant surprise, but he recovered when Hans returned to the cabin, holding two flutes of champagne, handing one each to Zweig and the grateful Elena.
‘Oh, yes?’ Zweig said to Ingrid, after his first sip. ‘And why was he interested in that?’
‘It’s just one of his interests, Father. He’s interested in all sorts of esoteric subjects, including flying saucers and poltergeists and the reported magical properties of pyramids, and he has a theory about the missing tip of the Great Pyramid.’
‘The missing *tip*?’ her father asked, after taking another sip of his champagne, his gaze steady upon her. ‘I’d like to hear about *that*.’
Still thinking it a nonsense, not believing it could be harmful, Ingrid repeated what Gerry had told SaintGermain about the missing tip of the Great Pyramid of Cheops, the one located adjacent to the Sphinx at Giza, where Gerry would be taking her tomorrow. When she had finished, her father gargled the last of his champagne, spat it back into his glass, handed the glass to Hans, then stared at his daughter as if seeing her afresh.
‘In other words,’ he said, ‘your long-haired American halfwit believes that the missing tip of the Great Pyramid, being a smaller, more perfect pyramid, contains magical properties and was stolen many thousands of years ago?’
‘Yes. He believes the missing tip of the Great Pyramid of Cheops is

potentially the most rare and valuable artefact on Earth. He's come here to try to prove that theory and, if he succeeds, to write a book about it.'
Her father's response was to untie his belt, let the dressing gown fall to the floor, and say to Elena, 'We are obviously heading in the right direction. Now please dress me, my dear.'
He was not unhelpful, raising an arm here, bending a knee there, while the gum-chewing Elena worked his clothes over his white, quivering mass of flesh.
'There has to be a reason for everything,' he said to Hans as Elena dressed him, 'even when ridiculous, and now we know why that insolent American pretends to find my daughter attractive.'
'You're so cruel,' Elena said in a tart manner. 'He probably just loves her for herself.'
'That's highly unlikely,' Zweig said.
'Why?' Elena said, grinning at the blushing Ingrid. 'I mean, take off her specs, let down her hair, and she'd probably be reasonably attractive. And American men, let it be said, are pretty easy to please.'
'You would know, of course, my darling Elena, with your vast experience.'
'Sticks and stones, Wilhelm.'
'Anyway,' Zweig said, already bored with Elena, 'according to the so-called Christian Grabbe, our quarry could be on this boat – the man who knows about the Lodestone, the Tuaoi Stone. And since the stone, as we know, is shaped like a miniature pyramid and possesses magical properties, it is clear who the man we want is. Obviously it's Ingrid's boyfriend, Gerry Remick. This odious creature, this Philistine American, will lead us to the stone.'
'I don't think – '
'You *can't* think,' her father brutally told her. 'I knew that from the day you were born, since you came from your idiot mother's womb. Now be quiet. Listen. Please don't annoy me with your nonsensical beliefs. Can I take it that you and the American will be visiting the Great Pyramid together?'
'Yes, but – '
'Very good! Hans, Elena and I will come along for the ride. You will be nice to your American, but reasonably quiet, mentioning nothing about this conversation. Your young man, whom you believe to be genuinely fond of you, is obviously the man we've been seeking. He knows about the missing tip of the Great Pyramid. That miniature pyramid is the magical Lodestone,

or Tuaoi Stone. I will not rest until I possess it – and your young man may well lead me to it. So don't say a word to him about what we've just discussed. Simply go where he leads and we will follow. Is that understood?'
'*Really*, Father,' she said, starting to worry about Gerry's welfare. 'I don't think Gerry is the man you're looking for. I think – '
'Thank you, my dear, for your advice,' Zweig interjected sarcastically, 'but you do not, as your American friend would put it, know shite from shinola. So please do as I say. In other words, be nice to him while being careful about what you say. What happens to him when we've finished with him is not your concern.'
He stared steadily at her, his face a block of stone, making her feel very concerned indeed about what he might eventually do to Gerry. It wasn't Gerry he actually needed
– almost certainly it was that mysterious Count SaintGermain – but when she thought of telling her father that that strange man was on board, she suddenly saw SaintGermain's eyes floating in front of her and couldn't open her mouth.
Taking a deep breath, avoiding her father's hard gaze, she tried to shake Saint-Germain from her mind and instead think of Gerry; but that only made her dwell on what her father was planning – and a tremor of fear rippled through her like cold air on a raw nerve.
'Of course, Father,' she murmured obediently, feeling sick to her soul. 'I understand perfectly.'
'Very good, Ingrid. *Excellent*!'
At that moment, the boat bounced lightly against its docking bay, making everyone in the cabin rock a little before steadying themselves. Ingrid stared through the porthole windows, saw the white glare of the noon sun, and longed to be out there, away from her father. She thought of the mysterious Saint-Germain, then of what her father had told her, and her love for Gerry, swelling up to fill her heart, made her yearn to protect him.
'I don't think that Gerry – ' she managed to say.
'You *don't* think,' Zweig insisted. 'You simply stick with your young man, who has appealed to your childish vanity, and leave all other concerns to me. Now is that understood?'
'Yes, Father, of course.'
'Gee,' Elena said, 'what a sweet kid! She's so god damned obedient.'

‘Just like you and Hans,’ Zweig retorted without mirth as Ingrid hastily left the cabin, desperately needing to get out in the open and breath fresh air.

Chapter Sixteen

Gerry had to admit it: even though he had often professed contempt for his mother’s luxurious life-style, he was delighted to be off that Nile cruise ship and having breakfast alone on the balcony of his air-conditioned room in the modern wing of the historic Mena House Oberoi Hotel, surrounded by forty acres of lush gardens and with the pyramids of Giza, about half a mile away, appearing to virtually tower over him, dominating the brilliant azure sky.

Sighing with sensual pleasure, he polished off another glass of orange juice, wiped his lips dry with a napkin and stood up. He glanced down at the already busy swimming pool beyond the palm trees, smooth green lawns and Egyptian-styled white walls of the rest of the modern wing, then went back into his room to prepare for what he fully expected to be the most exciting day of his trip, namely a visit with Ingrid to the Sphinx and three of Egypt’s oldest pyramids.

If anything, his fascination with the pyramids, particularly the Great Pyramid of Cheops, which he could clearly see from his window, had only been heightened by his conversation with the mysterious Saint-Germain, as well as by what he had subsequently witnessed on the deck of the boat. He therefore dressed with some urgency, hardly able to contain his excitement, donning a tropical shirt with full-length sleeves, to protect his arms from the burning sun, long black trousers, sensible shoes instead of sandals, then left his room and made his way through the extensive gardens to the lobby of the main hotel, which, according to his guide book, had once been a hunting lodge, furnished by the *khedive* Ismael for the sole purpose of receiving Empress Eugenie at the opening of the Suez Canal in 1869.

Such small details were of endless interest to him, and so, as he entered the luxury hotel, he breathed deeply in the belief that he was actually breathing in history.

His enthusiasm was dimmed a little when he entered the pleasant chill of the air-conditioned, exotic lobby and saw that while Ingrid was indeed waiting for him, as planned, wearing a nondescript loose grey dress and flat shoes, with dark, clip-on lenses on her thick-rimmed spectacles and her hair pinned up untidily on her head, she was with her father, Wilhelm Zweig, his whorish mistress, Elena, his handsome assistant, Hans, and a *galabiyeh*- draped Egyptian, whom Gerry assumed was a cab driver.

His spirits sinking, he froze where he was standing, intent on making a discreet retreat, but Ingrid, when she saw him, smiled shyly and waved him on with her right hand while her father, also seeing him, actually *smiled* and nodded in a surprisingly friendly manner.

Chilled to the bone by Zweig's welcoming smile, Gerry crossed the lobby. When he reached the group, he was even more surprised to note that Wilhelm Zweig was holding out his large hand.

'Mr *Remick*,' he boomed with feigned enthusiasm. 'Good morning! Please allow me to introduce myself. You and I did, of course, have our little differences the day we boarded the boat at Aswan, but let's put them down to traveller's fatigue and the heat of the noonday sun. I am Ingrid's father, Wilhelm Zweig' – here he shook Gerry's hand – 'and I believe you've already met the rest of my little group.'
'Hello,' Hans said.
'Hi,' Elena added.
'Good morning, Gerry,' Ingrid whispered timidly. 'I know Hans,' Gerry said, determined not to be too

friendly with Zweig, 'since he seems to have followed Ingrid and me everywhere – on your instructions, no doubt.'

'Please don't be offended,' Zweig replied smoothly. 'A father *has* his concerns, after all.' He then placed an arm around Gerry's shoulders and walked him out of earshot of the others. 'Please understand,' he said, 'that it wasn't *you* I was worried about. It was Ingrid I was keeping my eye upon, since, as you may have noticed, she is not the most mature of adults and has,

indeed, been in and out of various mental institutions for – ’

‘I know. She told me.’

‘She *did*?’ Zweig responded. ‘Well, how surprising that is! She must trust you a lot.’
‘I hope so, Mr Zweig.’
‘Anyway,’ Zweig continued, ignoring Gerry’s sarcasm, ‘you can understand why Ingrid, though no longer a child, has to be protected like one – from her own immaturity, as it were – so having Hans keep a concerned eye on her was simply my way of doing that. And I must say, Mr Remick, that your behaviour has been at all times exemplary. I was truly impressed.’
‘Okay,’ Gerry said. ‘No sweat.’
Zweig patted his shoulder, then led him back to the group, where Hans remained blank-faced, Elena was chewing gum, looking bored, and Ingrid, her head lowered, the living picture of humility, looked at him over the top of her darkened spectacles.
‘And so,’ Zweig said, still holding him by the shoulder and, taking Ingrid by the elbow, tugging her close to him, ‘you can come with us in our hired limousine, or, if you prefer, take the bus.’
‘The bus,’ Gerry said.
‘Of course,’ Zweig agreed. ‘Understood. Shall we proceed?’
He nodded at the turbaned Arab, who bowed and led them all out of the hotel, to where the bus and a lot of dusty taxi-cabs were waiting, the former already almost filled with passengers, those not with the tour haggling with the drivers of the latter.
Although it was less than half a mile to the pyramids, their sheer enormity made them seem even closer than that; and Gerry found himself staring at them in a state of disbelief, finally understanding why no photograph could quite capture their gigantic, eerily alien symmetry.
‘Oh, boy!’ he murmured.
‘So,’ Zweig said, offering a fleeting, unnatural smile, ‘our limousine is waiting behind your bus – and the bus is, I note, already almost full. You two best get going.’
Hardly able to look at him, Gerry took Ingrid by the elbow and hurried her to the bus, pushing her up into it before she could say goodbye to the others. He

followed her in, sat beside her in the rear seat, glanced down through the window and saw Zweig in a gleaming limousine, sitting beside the Arab driver, the two shadowy forms behind them obviously being Hans and Elena. Zweig caught Gerry's glance and waved at him, but Gerry didn't wave back, instead simply looking away and moving closer to Ingrid, taking hold of her hand.

'What did I do to deserve your dad's friendship?' he asked her. 'I mean, why is God punishing me?'

She smiled. 'I'm not supposed to tell you,' she said, 'but I certainly will.'

At that moment, their English-speaking Arab guide boarded the bus, introduced himself, explained what they would be doing when they reached the pyramids, then closed the door. The bus coughed into life, lurched forward, settled down again, then rolled out of the shade of the hotel and into the baking heat of the plain of Giza, with the pyramids disappearing momentarily before coming back into view, seeming to float magically in the air beyond the reddish soil of the plain and the shimmering heat waves.

'I can't wait to see inside that pyramid,' Gerry said. 'So, Ingrid, what about your dad? Why the welcoming treatment?'

'You're not going to believe this.'

'Try me.'

'Well, you know that my father had been hoping to meet someone on that boat, but didn't actually know who that someone was?'

'Right.'

'Well, he seems to think that someone is *you*.'

'*Me*? Why *me*?'

She squeezed his hand, as if to reassure him, but only succeeded in making him feel even more concerned.

'As you already know,' she said, 'my father has one of the world's greatest collections of rare art treasures and antiques – '

'Right.'

' – and is fanatical about getting his hands on more.'

'I believe it,' Gerry said as the bus bounced and rattled along the road to the pyramids, and the sunlight, beaming in from the plain of Giza, dazzled his vision.

'Well, apparently,' Ingrid continued, 'the thing he most wants in all the world is something called the Lodestone, or Tuaoi Stone, which is said to be a

small, pyramid-shaped object, made of an unknown substance and possessing extraordinary powers.'
'The missing tip of the Great Pyramid. It can't be anything else. That tip, a pyramid about five inches high, was removed centuries ago by a person or persons unknown, and hasn't been seen since – though there have been countless *rumours* about its whereabouts.'
'I see,' Ingrid said solemnly. 'Anyway, it seems my father's been after the object for many years, and that recently, in New York, information picked up by some of his men before they were killed in mysterious circumstances, indicated that someone who would be travelling on our Nile cruiser knows of its whereabouts – which is precisely why my father made the trip. Then, when I innocently told him your theory about the missing tip of the Great Pyramid, he assumed that you were the man he was looking for – the one who was going to lead him to the legendary stone.'
Gerry stared dumbly at her, scarcely believing what he was hearing.
The bus hit a pothole, almost throwing him off the seat, so he grabbed Ingrid and then glanced out the rear window. Zweig's limo was out there, not too far behind, obscured by the sand being churned up by the wheels of the bus.
Gerry turned back to Ingrid.
'*Saint-Germain*!' he exclaimed, snapping his fingers with glee. '*He* knew about the missing tip of the Great Pyramid and seemed seriously interested in my theories. In fact, he only grilled me to find out what I knew – he *already* knew all that – so the Lodestone probably *is* the missing tip of the Great Pyramid, and Saint-Germain is the one who knows where it might be. It's not *me* your dad should be following – it's our mysterious Count SaintGermain!'
Straining to see down the aisle, between the shoulders and heads of the other passengers, through the bus's front window to the approaching pyramids, he could scarcely contain his excitement.
'Unfortunately,' Ingrid said, tugging his elbow to regain his attention and then dampening his ardour, 'SaintGermain wasn't seen either boarding or leaving that boat, was not registered with the purser, and appears to have disappeared into thin air after you saw him with that other mystery man under very peculiar circumstances. In a real sense, then, Saint-Germain doesn't exist – and that, as far as my father is concerned, leaves only you.'
'You didn't tell him about Saint-Germain?' Gerry asked her.
'No,' she replied. 'There was no point. He wouldn't have believed me. I tried

to tell him you knew nothing about the so-called Lodestone, but he didn't believe that either. So he's being friendly to you because he thinks you're here for a purpose. In other words, he thinks that if you don't actually lead him to the Lodestone, you'll at least, perhaps even without knowing it, provide a clue to its whereabouts.'
'And if I don't?'
'You're in trouble.'
Her eyes were still hidden by the dark, clip-on lenses, but her face showed her concern; and being no stranger to trouble, Gerry saw it coming straight at him.
'Terrific,' he said.

Chapter Seventeen

The bus did not take the left fork to the Sphinx, but instead drove straight on to the three enormous pyramids and stopped where the tickets to the site were sold, letting the passengers out into the dazzling light and draining heat, in the midst of babbling Arab touts with their souvenirs, camels and donkeys.

Gerry enjoyed the touts, being amused by their relentless hustling, but was even more amused when, as the tour guide led the group towards the Great Pyramid of Cheops, he saw them swarming eagerly around Zweig, who, angrily waving them away, was like a man fighting off a swarm of bees.

After being besieged by Arabs trying to inveigle them into purchasing souvenirs or rides on camels and donkeys, the tourists from the coach were led by the tour guide straight to the Great Pyramid, prior to their tour of the whole site, including the Sphinx.

Surrounded by smaller funerary temples and flattopped *mastaba,* the three large pyramids soared up from the desert sands in awesome, geometric splendour, with the Great Pyramid dominating all, its truncated peak seeming to pierce the immaculate azure sky, and its Grand Stairway, constructed in irregular tiers of stone, leading up to the boundless blue of the cosmos.

Dwarfed by the immensity of those eroded, sloping walls, but exhilarated by

the magic and mystery of their history, Gerry wanted to climb the stairway and stand at the very top, just below the missing apex, to look across the barren wastelands of the shimmering desert. However, that activity was forbidden (the four sides of the pyramid were deemed to be too dangerous) and so, as some of the other tourists settled for strolling around the ruins, he stuck to his original plan of venturing with Ingrid into the Great Pyramid and making the reportedly strenuous journey to the king's burial chamber, hidden deep in the heart of the towering edifice.

As he and Ingrid were checking the torches they had brought with them for this occasion, Zweig hurried up to them, accompanied by an already weary Elena and a clearly anxious Hans, trailing a stream of Arab urchins and touts, and hissing through clenched teeth, '*Scheisse*! How I detest this Islamic scum!'

'God damn it,' Elena said, wiping sand from her face and arms, 'let's get the hell out of here. Let's go back to the hotel and have a drink and then jump under the shower.'

'Stop complaining!' Zweig snapped. 'These babbling Arabs are bad enough! I'm getting a headache just listening to them, and your moaning won't help.' Stopping breathlessly in front of Gerry and Ingrid, he wiped more sweat from his flushed face and offered a waxen smile. 'So, Mr Remick,' he said, 'I note that you and Ingrid are holding torches – '

'What?'
'Flashlights.'
'Oh, yeah. Right. You were speaking English English,

not American.'
'Correct. Torches. Flashlights. Whatever. So clearly
you are venturing inside.'
'Yeah,' Gerry said. 'Right.'
'Elena, my dear, would *you* like to venture inside?' 'Are you kidding?' Elena responded indignantly. 'I'm
already filthy enough as it is. I want a cool drink and hot

shower.’
‘I myself would like to see the King’s Chamber,’ Zweig said, obviously lying, ‘but unfortunately tend to suffer from occasional claustrophobia and therefore couldn’t deal with the narrow tunnels. However, *Hans* would like to see inside. *Wouldn’t* you, Hans?’
‘Yes, sir,’ Hans replied without enthusiasm. ‘Naturally, I would.’
‘Well, take that torch, that flashlight, out of your pocket and join Ingrid and Mr Remick. I think that’s sensible, don’t you?’
‘Yes, sir,’ Hans said glumly
Removing the torch from his pocket, he reluctantly joined Gerry and Ingrid where they were standing with the Arab guide and three other tourists, two men and a woman, all middle-aged, preparing to enter the Great Pyramid. ‘I will wait for you out here,’ Zweig said. ‘*Au revoir*.
Enjoy yourselves.’
Gerry switched on his torch, watched Ingrid and Hans do the same, then took hold of Ingrid’s free hand and moved in directly behind the Arab guide as he led them up the steps carved out of the base of the Great Pyramid. The heat was fierce, burning down on his head and shoulders, the light seeming to beat back from the sloping wall to dazzle his vision.
Following the Arab guide, he stepped through the entrance, into the pyramid’s interior, felt a chill, smelt stale air, and saw a short passage straight ahead, leading to a flight of stone steps in the gloom farther on. Still behind the Arab guide, still holding Ingrid’s free hand, with Hans and the other three tourists bringing up the rear, he ascended the steps, into a deeper gloom, and found himself at the bottom of a steeply climbing tunnel, most of which receded into ominous darkness.
‘Damn!’ Hans whispered nervously behind him. At that point, Gerry had to release Ingrid’s hand and

clamber up the gallery ramp just behind her, prepared to catch her if she fell. Glancing back over his shoulder, he saw only pitch darkness; looking ahead, he saw only the round lights of the torches sliding along and over the surprisingly smooth, finely joined stones as the roof of the tunnel dropped progressively lower and the passage became uncomfortably narrow – to the degree, eventually, where the ceiling was only about three feet high and the walls not much wider apart, thus forcing him to stoop even more until he was virtually bent double.

'Are you okay?' he asked of Ingrid, who was still ahead of him.

'Yes,' she replied, her voice breathless and echoing around him with a ghostly unreality.

The trek seemed to take longer than was actually the case, leading them into an even deeper darkness, into a silence that resounded only with their cramped, heavy breathing and scuffling footsteps. Gerry sensed Ingrid's tension and understood it. He also understood why so many tourists couldn't take this particular hike and turned back before they reached the King's Chamber, buried deep in the pyramid.

'Shit!' Hans whispered behind him in perfect English. 'I can't breathe! I don't like this!'

Mercifully, at that moment, they reached the summit of the gallery ramp, clambered through another short, lowceilinged tunnel, then entered an empty, pyramidal chamber. Soaring nearly thirty feet above their heads, it allowed them to breathe more freely, even though its actual base, hemmed in by side ramps, was no wider than the height of the low passage they'd just left.

Gerry just had time to glance above him at the high, narrow roof of the pyramidal gallery before the guide was disappearing into another passage, thus forcing them all onward again.

When this new, more humid darkness fell about him,

causing him to sweat and blink repeatedly, Gerry found himself struggling awkwardly across dangerously sloping, polished stones, then through another claustrophobically low chamber, and finally – as the female tourist offered a whimpering sound of protest or fear – stumbled into the relative spaciousness of the King's Chamber, the burial chamber, which was also in darkness.

'Thank God!' Hans whispered from behind, sounding breathless and hoarse.

In the dim light of their torches, Gerry was able to see the empty sarcophagus, the structural perfection of the walls and the great roof, formed by nine granite slabs weighing over 440 tons. In those few seconds of complete, heart-stopping silence, hardly even aware of Ingrid, Hans or the other three tourists, he felt the presence of the Pharaoh's *ka*, or spiritual double, and was filled with the mystery of the ages covered up by the desert sands. The silence was ethereal, other-worldly, almost palpable, and he felt it pressing in around him, as if trying to steal his soul. Then Ingrid took his hand, squeezed it tenderly, tugged him to her, letting him know that she was sharing his feelings of unreality and awe. He acknowledged her presence, pressing against her, smiling at her, not believing that he had finally made it to here and was standing beside her.

They were at the centre of the Earth's landmass, in the very heart of Man's universe, and he felt himself shaking with that awareness, his senses draining out of him. Then he felt a hand falling upon his shoulder and gripping it painfully.

'What do you *really* want here?' Hans asked, whispering. 'Is this the home of the Lodestone?'

At that very instant, before Gerry could reply, all the torches blinked out, abruptly plunging the burial chamber into total, terrifying, pitch darkness.

'Oh, my God!' the female tourist cried out, her voice

echoing eerily. ‘Oh, my God, what’s happening? The torches! *Oh, dear God, I can’t see*!’

In her panic, she dropped her torch and let out a high, piercing scream which, reverberating shockingly around the stone chamber, was soon joined by the equally terrified babbling of the Arab guide and the hoarse, panic-stricken voices of the two male tourists – all blending into a ghastly, purgatorial cacophony that ricocheted around the chamber in a darkness so complete that Gerry felt he had lost his mind and was spinning down into vertiginous depths beyond all hope of escape.

He was only rescued from this fate, which he realized was simply panic, by the feel of Ingrid’s body against his own as he tried in vain to get his torch to come on again. ‘Christ!’ he exclaimed in frustration. ‘What the hell’s happening here?’

‘I can’t see! I can’t see!’ the woman wailed. ‘*Oh, dear God, we’ll be trapped here*!’

There was the sound of rushing feet as the woman tried to escape, then a dull thud as she ran into a wall and slid down it, sobbing.

‘Oh, no!’ Hans said softly behind Gerry. ‘What on earth…?’

And even as his whispered question trailed off into silence, and as Ingrid shivered fearfully in Gerry’s embrace, Gerry looked straight ahead, into that immaculate, pitch-black darkness and saw, where he assumed the wall and sarcophagus had been, what appeared to be a pinprick of light.

A pinprick of light that was gradually growing bigger, as if someone was drilling a hole in the wall to admit the outside world.

‘It’s not possible!’ Hans whispered.

‘What’s *that*?’ one of the men bawled hoarsely as the Arab guide, after a couple of seconds of stunned silence, also saw the expanding light and released another demented wail.

‘No!’ the female tourist shrieked hysterically. ‘I don’t believe… *No*!’
It was a cry of protest against the unbelievable. But at that very moment, as the pinprick of light grew into an approaching, pulsating glowing, the impenetrable sheet of darkness where the wall of the chamber should have been, filled up with brightening, rapidly expanding light, took on a pale-blue sheen, then brightened and expanded even more until it was a vast, alien sky, filled with glistening stars and great moons.
An unknown, overwhelming cosmos.
‘No!’ the woman shrieked. ‘*No*!’

Chapter Eighteen

The woman’s shrieked protest trailed off into a demented sobbing which, blending in with the babbled prayers of the Arab guide, filled Gerry’s head. Transfixed, but vividly aware of Ingrid’s heart beating against his chest, he watched as that pulsating white light raced out of the starflecked cosmos – out of dizzying depths of space in which there was no north or south, no east or west, no up or down
– and expanded as it approached, becoming a fiery glob, then a floating white disc that grew bigger and brighter, racing towards him at incredible speed, paralysing him as it flared up to obliterate the stars, then abruptly exploded into the dark chamber, temporarily blinding him.

There was a lot of terrified screaming and bawling from those around him, but he felt Ingrid against him, took courage from her proximity, and opened his stinging eyes as the exploding, swirling light contracted and dimmed, shrinking down to the height of the average man, eventually forming a faintly glowing cocoon of ectoplasm in which two apparently human figures were slowly, magically materializing.

That glowing ectoplasm illuminated the sarcophagus… and there, on either side of the empty stone coffin, shimmering in an unreal manner with stars showing faintly through them, were the silvery-haired gentleman,

SaintGermain, and his mysterious partner.

They were both looking younger than Gerry remembered them, both wearing snow-white *galabiyehs*, and staring, with slightly sinister yet oddly seductive smiles, straight past him, at whom he could only assume to be Hans.

‘You cannot have the Tuaoi Stone,’ Saint-Germain said, his voice ethereal and unreal in the glowing darkness. ‘To pursue it will damn you.’ He then stared directly at Gerry, his gaze brilliant, terrifying, and said, ‘You must know that the first number is “one”. Now depart from this sacred place.’

‘Shit!’ Hans shouted. ‘Christ!’

Jerked out of his freezing terror by the sound of that outcry, Gerry glanced back over his shoulder.
Illuminated in the faint glowing of the ectoplasmic light, Hans was drawing a small pistol from his pocket. Yet even as he was doing so, the light around him dimmed, making him glance up in surprise, and then, with his jaw hanging open, he froze where he stood.
A gasp from Ingrid made Gerry look to the front where, still standing on either side of the sarcophagus, the two figures in white *galabiyehs* were becoming more transparent, the stars shining more brightly through them, before the globe of glowing matter flared up brilliantly again, obliterating those within it, then filled the chamber with a blinding radiance, a roaring whirlpool of light, which then seemed to burn through the chamber wall just above the sarcophagus to race away at incredible speed toward the distant stars, until it was only a pinprick of light… then nothing at all.
Nothing.

Chapter Nineteen

Abruptly, the chamber was plunged back into pitch darkness, making the woman scream again, but instantly, simultaneously, all the torches came back on, some lying on the floor where they had been dropped, others still in their owners’ hands, to illuminate the stone walls and floor.

The praying Arab jumped to his feet, shone his torch at the chamber's exit, and was heading urgently towards it as the screaming of the woman broke down once more into hysterical sobbing. One of the men rushed over to her, helped her back to her feet, put his arm around her waist and practically dragged her, still sobbing, out of the King's Chamber and into the exit passage, where they fell in behind the fleeing Arab guide.

Glancing at Ingrid as she wiped tears from her eyes, Gerry smiled reassuringly at her and then glanced at Hans, who, with his pistol dangling uselessly from his right hand, was still staring in utter disbelief at the smooth, solid stone wall above the sarcophagus.

'Let's get the hell out of here,' Gerry said. 'And that means you as well, Hans.'
The Arab guide's terrified praying resounded with the sobbing of the hysterical woman all the way back down through the low chambers and dark passages of the pyramid
– and didn't stop when they finally made their escape back into the blinding sunlight, where the woman, still sobbing hysterically, sank to her knees and the Arab guide raced up to his friends, gesticulating frantically when he tried explaining what had occurred.
As his eyes adjusted to the sudden fierce light, Gerry saw Zweig clamber out of the rear of his limousine, rush up to Hans, grab him by the collar of his sand-covered shirt and shake him violently while demanding to know what had caused all the fuss. When Hans told him, Zweig just glared at him, not believing what he had heard, then jabbed his index finger at Gerry and hissed, 'So what about *him*?'
'No!' Hans exclaimed, his eyes too large and bright. 'It was the one in there!' He jabbed his thumb back in the direction of the Great Pyramid. '*It had to be SaintGermain*!'
As if slapped in the face by the very sound of that name, Zweig took a step back, glanced blindly at Gerry, then said icily to Hans, 'Don't just stand there with your tongue hanging out! Get in the car, you damned fool!'
Hans hurried to join Elena in the rear of the limousine as Zweig, sweating profusely, his face flushed with rage, marched towards Gerry, kicking up small clouds of sand, and eventually stopped in front of him and Ingrid,

glaring at both of them.
‘I should have known,’ he said to Gerry. ‘You’re nothing but worthless scum! Don’t ever approach my daughter again. If you do, I’ll destroy you. Now come here, Ingrid. *Here*!’
Before Gerry could fully regain his senses, Zweig had grabbed Ingrid by the wrist and dragged her to the limousine, pushed her into the back, beside Hans and Elena, clambered into the front seat, beside the Arab chauffeur, and then slammed the door. The limousine roared into life and raced off along the road, churning up clouds of sand, leaving Gerry standing alone, the swirling sand settling around him, the sobbing of the hysterical woman filling the stunned silence behind him, his back turned to one of the sloping walls of the Great Pyramid, his gaze focused, first dazedly, then with more thought, on the distant Sphinx, that lion with the human head, which had surveyed the Egyptian desert for centuries, and might still be doing so when he and the rest of humanity had disappeared from the Earth.
He stood there a long time.

Chapter Twenty

The following morning, knowing that Gerry was due to fly to London, Ingrid awakened early in her luxurious single bed, quickly showered and dressed, then left the room, closing the door quietly behind her. She made her way through the extensive gardens of the hotel in the morning’s fading pink light, planning to bid Gerry farewell before he departed.

She had assumed he would be in the main lobby by now, but was surprised to see him standing alone by the swimming pool, fully dressed, gazing beyond the arched doorways and flat roofs of the modern wing at the three ancient pyramids and Sphinx that dominated the skyline less than half a mile away with their symmetrical perfection.

Still shaken by yesterday’s frightening experience, but swelling up with love for Gerry and heartbroken that he was leaving, she went down to the swimming pool, stopped beside him, and, standing on tiptoe, pressed her lips to his cheek.

Surprised, he jerked his head around, stared at her, then smiled.
‘Well,’ he said, ‘this *is* a pleasant surprise. I didn’t expect to see *you* again.’
‘You thought I’d let you leave without saying goodbye?’
‘I thought your dad might lock you in your room. He sure seems the type.’
‘He is… but here I am.’
She wanted him to hold her and kiss her properly, on the lips, but instead he just shuffled his feet, shyly avoiding her gaze.
‘So,’ she said, ‘you’re really going.’
‘Yeah,’ he said. ‘The airport coach will be here in twenty minutes.’
‘We won’t see each other again after that.’
‘No… I suppose not.’
She sank into her pain, but tried not to show it. Instead, she just sighed and looked down, with very little interest, at the crystal-clear, rippling blue water in the elegant swimming pool.
‘Have you recovered from yesterday?’ she asked him.
‘Yeah,’ he said. ‘At least, I think so. I’ve been lying awake most of the night thinking about it… But, yes, I’ve recovered.’
She had wanted him to say that he had stayed awake thinking of her, but since the pyramids were obviously more important to him, she decided to stick with that subject.
‘Did it really happen?’ she asked.
‘Yes, Ingrid, it really happened. Saint-Germain materialized with his equally strange friend. He warned Hans, therefore warning your dad, to stop pursuing the Tuaoi Stone – note, the *Tuaoi* Stone, not the Lodestone – then informed *me* that the first number is “one” – whatever that means. So, yes, Ingrid, it was real. It all happened.’
‘It frightens me terribly,’ she told him. ‘I’ll be glad to get out of here.’
‘*Everything* frightens you,’ he said. ‘That’s one of your problems.’
Shocked, feeling as if he had slapped her face, she raised her eyes from the swimming pool and studied him, searching for malice. She saw none, just a distant, wounded look, then he turned away from her, until he was facing the pyramids, a slight slump to his shoulders.
‘So your dad wants the Lodestone,’ he said, ‘which obviously is also known as the Tuaoi Stone. He thought someone on that boat knew where it was, and that I, because of my interest in the missing tip of the Great Pyramid, was the guy he was looking for. But I wasn’t. Saint-Germain was… and we don’t

know who *he* is.'
She didn't reply. She just wanted to flee this country. She couldn't bear to be this close to Gerry and not be in his arms.
As if sensing this, he sighed and turned back to face her, his blue eyes slightly misty.
'Why does your dad want it?' he asked her. 'Apart from the fact that it's the world's most rare, priceless artefact?'
'You *know* why. You've recently been told. The Lodestone is reported to possess awesome, magical properties, and it's rumoured that he who owns the stone can own the world if he chooses.'
'And right now,' Gerry said, 'that's most likely to be Saint-Germain… or his equally mysterious, perhaps ghostly, partner.'
'Yes. And if my father could have that kind of power – the kind of power we witnessed yesterday in the King's Chamber – he'd certainly use it to threaten the whole world and bring about the dominion of his own, even more terrible, version of the Third Reich – a magical Order, created by his supernatural powers, with all subservient to him. My father, dear Gerry, is a psychopath and megalomaniac. Certainly he wouldn't consider using the stone to do *good* for mankind.'
'I'm going to stop him,' Gerry said. 'I'm going to find out all I can about the Tuaoi Stone and Saint-Germain; and then, whether it turns out that Saint-Germain is good or evil, I'll ensure that the stone isn't allowed to fall into the hands of your dad or anyone like him. I'm going to do that for myself, but I'm also doing it for you. Because I can't stand the way your dad treats you, nor what he's done to you, and I'll get my revenge by depriving him of what he most wants. Believe me, I'm determined. I'll do it.'
Ingrid felt herself melting in the warmth of her love; her skin was burning with an ethereal heat, but she still couldn't confess that much to him.
'What did you mean when you said everything frightens me? Why did you say that?'
'Your dad frightens you,' Gerry replied. 'He has you completely terrified. You're so frightened of him, you can't make a move without him – and he knows that and uses it against you. He has your life in his pocket.'
'That's not true,' she said.
'Yes, it is, Ingrid.'
'I can do anything I damn well please.'

‘Then come with me,’ Gerry said.
She was shocked, rendered speechless, at once delighted and ashamed, swelling with pride because she knew he was professing his love for her, but sinking simultaneously into humiliation because she could not find the courage to prove him wrong.
‘No,’ she said, ‘I can’t do that.’
‘Why?’
‘He’d just follow us relentlessly wherever we went, and then, when he found us, he’d destroy you, just to hurt me.’
‘And that’s why you won’t come with me? For *my* sake?’
‘Yes, Gerry, that’s right.’
‘That’s a lie.’
He turned away from her again and spoke with a quiet, suppressed fury, a smouldering passion.
‘I love you, Ingrid. I’ve never been in love before. But I love you and I know you love me – and yet you’re giving me up. You’re doing it out of fear, out of cowardice, and I simply can’t stomach that.’
‘I’m sorry,’ she said, ashamed that she couldn’t conquer the fear that was holding her prisoner.
‘And that’s it?’ he said. ‘You’re sorry?’
‘I don’t know what else to say, Gerry. I can’t go with you. I *can’t*!’
‘Damn it, Ingrid, you *have* to. For your own sake as well as mine. If you don’t leave with me, you won’t leave with anyone. You’ll be stuck with that monster for the rest of your life, living a life filled with regrets and enduring a slow emotional death. So come with me… *Please*!’
She knew that what he said was true, that giving him up would destroy her, yet even as she felt the pain surging up from her centre, even as her heart broke and shame overwhelmed her, she couldn’t find the courage to break free and take what he offered her.
‘I’m sorry,’ she whispered.
Gerry lowered his head. His back was still turned to her. He was framed by the Great Pyramid, where their love had defeated fear, but even when she saw him visibly trembling, she could not fight her oldest, most enduring fears.
‘I love you, Ingrid,’ he repeated. ‘But clearly that isn’t enough. Don’t touch me. I can’t bear to have you touch me. I love you too much. Oh, God, Ingrid… *goodbye*!’

To leave, he had to pass her, his elbow brushing her breasts, and she saw a hint of tears in his blue eyes as he hurried away. She watched him departing, resisting the urge to call him back, desperately wanting to do so, but dreading the humiliation, knowing that even if he returned, she still would not leave with him.
He waved once as he crossed the gardens, but he didn't look back. She saw him disappearing around a whitearched doorway, between the rooms of the modern wing, some large palm leaves shivering briefly over his head, as if in mournful farewell.
Then he was gone.

Chapter Twenty-One

Ingrid was destroyed. Her cheeks burned as her heart raced. She felt her eyes fill up with tears, let them trickle down her cheeks, then wandered slowly back through the gardens, weeping silently, ashamed of her cowardice, grieving for the loss of her first love and wanting to die.

She returned to her lonely room, lay back on the bed, cried even harder, then stopped and stared up at the ceiling. She felt drained, depleted, immune to all but pain, and was starting to slip into quiet hysteria when her father arrived.

He knocked and then entered, not waiting to be invited, offering a rare smile and with Elena right behind him, her grin also suggesting a private joke as she leaned against the door frame.

'Good morning, my child,' Zweig said, his eyes untouched by his smile. 'I note that you're already up and dressed, but with moist, swollen eyes. Now why would that be, my pet?'

She tried not to be frightened of him – and was, for the first time, surprised to find the fear falling away from her, removing a weight from her shoulders. Emboldened, and realizing what pride meant, she returned his hard stare.

'It's nothing,' she lied. 'My eyes are stinging from the water in the pool. I went for an early-morning swim.'

‘Really?’
‘Yes, really.’
‘You wouldn’t *lie* to me, would you?’
‘No, Father,’ she lied again, feeling a warm flush of pleasure.
‘Well,’ Zweig said, ‘I’m glad to hear *that*. I mean, I couldn’t bear to witness *two* people crying before breakfast is served.’
She felt herself stiffening, wondering what was to come, but she managed to keep the concern from her face and her eyes on her father.
‘Two people crying?’ she asked him. ‘What do you mean?’
‘That young American,’ Zweig said, sighing with triumph. ‘We just saw him leaving. Taking the bus to the airport. We tried to be pleasant – to say goodbye, as it were
– but he couldn’t see us through the tears in his eyes and so went off without a word… *Very* strange. And now we find you with eyes suspiciously moist. Well, what *are* we to think?’
Elena couldn’t contain herself and started giggling into her hand, leaning forward to hide her face against Zweig’s broad back, her arm snaking around him. Zweig guffawed and turned into her, wrapping his thick arms around her, then together they staggered out of the room, convulsed by their sick joke.
Ingrid closed her eyes, bit her lip and took a deep breath. She held her breath in for some time, letting her pain turn to rage, then opened her eyes again, let her breath out, and eventually rose to her feet with the strength she had almost lost.
She went to her window, looked down upon the gardens, then thoughtfully studied the wondrous symmetry of the three awesome pyramids beyond that relatively short stretch of desert. She thought of the Nile cruise, of her growing love for Gerry, of his accusation that she was ruled by her own cowardice – and of how, by letting him go, she had simply proved he was right.
She didn’t cry again. There were no tears left to shed. Instead, she thought of the sanatorium, of the contempt she had mustered there, and of how she had thrown her cigarette into the wastepaper basket and later watched the smoke billowing up from the fire in her room.
Recalling that incident, and the satisfaction it had given her, she smiled and shook her head in an affirmative manner.

‘Yes,’ she said, speaking aloud, to herself, ‘you need positive thinking.’
When she heard the maid opening the door across the hallway, she left her own room, followed the girl into Zweig’s bedroom, and told her that she was going to wait there for her father. She watched the girl in silence, taking pleasure from her efficiency, then, when the girl had left, she glanced down at the neatly made double bed and said, ‘*Au revoir* – to you *and* your blonde whore.’
She rifled every drawer and took all the cash she found there, a considerable amount, then returned to her own room, packed a shoulder bag, wandered in a leisurely manner out of the hotel, as if just off for a stroll, and caught a cab to Helipolos International Airport, determined, for the first time in her life, to brave the world on her own.

The Lodestone

It is said that whoever holds the Lodestone will own the entire world…

It was originally the apex of the Great Pyramid of Egypt. Its function was to create fusion between Earth and the Cosmos. It holds the key to the infinite mysteries of the

universe. And it has been missing for centuries…
Wilhelm Zweig, ageing master-criminal, is determined to find it – and with it the key to immortality.

But in his way stands the legendary Count de Saint Germain, history's most mysterious figure, believed to be the protector of the magical stone. And against him is Gerry Ibrahim, a young American with a passion for unexplained phenomena – and for Zweig's unhappy daughter, Ingrid.

Together, and relentlessly pursued by the evil Zweig, Gerry and Ingrid embark upon a dangerous quest for the
Lodestone, an epic journey that takes them through Europe and the Orient, past the sites of the Seven Wonders of the World, and on to a final magical confrontation on the summit of the Earth…

The Lodestone

Book Two
The Seven Stations of Learning

Chapter One

Gerry was sick. Awakening in the stifling bedroom of his crummy rented apartment in Notting Hill Gate, London, and hearing the amplified sounds of a Rasta Reggae band practising already at nine in the morning for the forthcoming evening's frolics, he was pouring sweat, felt as if his head was splitting, and also suffering his long dark night of the soul even in the extremely rare English sunshine. He was depressed, enervated, devoid of his normal zest, and as he dragged himself out of bed, feeling grey on this sunny morning, he knew exactly what he was suffering from.

He was obviously lovesick.
Despising himself, telling himself to act his age, he ran the hot water and then climbed into the bath, thinking distastefully of how squalid the English were, washing in their own filth. God, he wanted a shower! He wanted Ingrid naked in it. He wanted to be naked in it with Ingrid, soaping her soft skin. Instead, he was in this filthy English bath, thinking of drowning himself.
Disgusted to see the grime of London wash out of his hair and lap around his unprotected skin in the soapy water, he hastily climbed out, pulled the bath plug, then dried himself. Refreshed, or at least relieved to escape the bath, he put on some clothes, not really caring what he wore, beyond mere mortal vanity.
Mere mortal vanity didn't prevent him from having an orange juice and something to eat. What he had, in fact, was some atrocious English bread with really terrific Cheddar cheese, followed by a cup of Italian black coffee, which he sipped by the window.
It was now ten in the morning and the street below was already busy. The West Indians and Rastas were taking in the sun while the tourists, walking past their pounding music, looked on agog. Gerry liked it in Notting Hill Gate. It reminded him of New York. His only problem was that he no longer slept well at nights, obsessed, as he was, not only with the loss of Ingrid, but

with the mystery of SaintGermain and what had occurred in Egypt.
Helpless in regard to his parting from Ingrid, he was at least able to start work on his search for the legendary Lodestone, or Tuaoi Stone, and, incidentally, unravel the mystery of Saint-Germain. To this end, he had already placed an advertisement in the *Guardian* newspaper, asking for an 'adventurous, open-minded, Personal Assistant with experience in historical research'. That ad' had been placed in yesterday's newspaper, there had already been some phone calls from aspirants, and Gerry was hoping to interview a few of them tomorrow.
If nothing else, it would take his mind off Ingrid.
In fact, even though Ingrid had broken his heart by not showing more spirit and coming with him, Gerry understood what a lifetime's humiliation could do to someone and had therefore already forgiven her in his heart. The person he could not forgive was Wilhelm Zweig, that bloated arsehole who had turned a potentially beautiful young woman into a timid, emotionally distraught victim with no hope for the future.
No, he could not forgive that; and so, apart from his own insatiable need to find the legendary Tuaoi Stone, he was filled with delight at the very thought of depriving Zweig of the one thing he most wanted in all the world.
Unfortunately, Gerry's major problem was money. It was one thing to embark on an epic voyage of discovery (which is how he liked to think of it) and quite another to do so without even the cash to pay for the assistance he so badly needed, not to mention his own everyday expenses. So, whether or not he liked it, he would have to call his mother in New York and lay the word on her.
Deciding that he might as well get this over with as soon as possible, he removed his keen gaze from the busy street below, drank the last of his coffee, then picked up the telephone, dialled the operator and asked her to call his mother's number, reverse charges. He could actually hear his mother's phone ringing in New York, but she took a long time to answer it; then, when she did, she sounded tired and irritable until told by the operator who was calling. At that, she yawned loudly, murmured, 'Oh, dear God,' then added impatiently, 'Yes, of *course* I'll accept the charges. Now please put him on.'
'Hello, caller?' the London operator said.
'Yes,' Gerry replied obediently.

‘You’re through to your number. You can speak now.’ ‘Terrific,’ Gerry said.
‘Mom? Is that you, Mom?’ ‘Yes, dear, it’s – ’
‘I’m sorry I haven’t called before, Mom, but I’ve been tied up with – ’
‘Do you know what *time* it is here, son? It’s five in the *morning*!’
‘Aw, gee, Mom, I’m sorry. I didn’t think. I mean, I was just sitting here thinking about you – and, you know, felt guilty and called on impulse. I’m real sorry if I’ve got you out of bed – ’
‘You have.’
‘ – and I’ll call you back later.’
‘No, dear, don’t do that. You’ll probably catch me in the middle of my bridge party or having a bath. So, how did it go, dear? Your trip to Egypt, I mean.’
‘Terrific,’ he said. ‘Absolutely fantastic. I won’t forget it as long as I live. It was money well spent, Mom.’
‘Please call me *Mother*, dear. You know I hate *Mom*.’
‘Sorry, Mother.’
‘So why aren’t you *home* already, dear? You should have been back two weeks ago.’
‘Well, Mom – Mother – the thing is…’
‘Why are you hesitating, Gerry? Are you in some kind of trouble? You must tell me *instantly* if you are. I knew it! I just *knew* it!’
‘No, Mother, I’m not in trouble. I’ve just got a little problem that I hope you can help me out with.’
‘Of course, dear. Just get on the next airplane. We’ll sort your problem out as soon as you get home. There’s no need to worry, dear.’
‘I’m *not* worried, Mother. I just need some money – some *cash* to live off for the next three or four months, using this place, London, as my base.’
His mother was silent for some time, obviously trying to take in what she had heard. Eventually, with an audible sigh, she said: ‘You want to stay in *England* for another three or four months?’
‘Yes, Mother, that’s right.’
‘Has this something to do with some… *female*?’
‘No, Mother,’ he said, feeling distinctly uncomfortable. ‘I mean, not really. I mean, it *has*, in a sort of way, but not really – you know?’
‘No, dear, I do *not* know. Please elucidate.’
Hardly knowing where to begin, and aware, when he *did* begin, that what he was saying probably sounded nonsensical, he recounted the most important

events of his trip, specifically those involving the bloated Wilhelm Zweig, his heartbreakingly oppressed daughter, Ingrid, and the mysterious Count Saint-Germain and his unknown partner.

As he talked into the disbelieving silence at the other end of the transatlantic line, he became fully aware, for the first time, that he had spent the last fortnight like someone in a state of shock, only leaving his apartment to purchase food and drink, usually only getting out of bed when forced to consume what he had purchased, sweating under the stale sheets, sleeping badly, if at all – an unprecedented condition that was obviously caused not only by the loss of the weirdly attractive Ingrid, but by his own enormous difficulty in accepting that what he remembered of Egypt had actually occurred.

His state of suspended animation, or chronic disbelief, had hardly been helped by the pain he was feeling over the loss of Ingrid – and even now, as he talked into the vacuum of his mother's growing incredulity, he was lacerated by that pain, remembering Ingrid's shy smile, her inhibition and fear, her hazel eyes magnified by the old-fashioned, thick-rimmed spectacles, which, in conjunction with her primly pinned-up auburn hair, had made her seem like a forlorn Victorian servant or the living personification of an equally forlorn, clichéd spinster.

When he thought of that pitiful creature, he felt completely heartbroken. Nevertheless, he kept talking, pouring his words into his mother's silence, reaching his climax with the extraordinary happening in the King's Chamber of the Great Pyramid, vividly recalling, as he talked about it, that dizzying glimpse into the abyss of the infinite, with Saint-Germain and his unknown partner materializing magically out of the ether. He then explained that he had to remain in Europe until he had solved the awesome riddle, at no matter the cost.

'And that's what I need the money for,' he explained. 'I suspect that my investigations will take a lot of time and involve a lot of travelling, possibly even back to Egypt, and I'm going to use London as my base of operations. So, Mom – Mother – apart from my credit cards, I need some hard *cash*.'

As a former amateur actress of some standing, his mother was a dab hand at the double-take and dramatic pause; now her silence, which seemed to stretch out forever, also stretched his nerves to breaking point before, with another beautifully timed sigh, she released him.

‘Oh, dear God,’ she said. ‘You haven’t learned a thing, have you? Still ignoring the real world and inventing these ridiculous stories. I give up, dear. I really do.’
‘It’s all true, Mom! It all happened!’
‘Of course, dear. I understand. Now put the young lady on the phone and let me talk to her.’
‘*What* young lady?’
‘The one you had all these great adventures with – and whom you doubtless need the money to support while you live there in sin. Please let me talk to her.’
Outraged, Gerry wanted to slam the phone down, but his need for his mother’s money was greater than his need to be proud.
‘I told you!’ he almost screamed. ‘We said goodbye in Cairo! I left her and flew straight back to London and rented this dump. I don’t even know where she is, Mom – Mother. I’m on my own here. I promise!’
‘Stop being so melodramatic,’ his mother said and then was silent again. ‘I *do* hope you understand,’ she said, after a great deal of thought, ‘that I *would* like you to have a serious relationship with a member of the opposite sex, but not, dear God, with a *German*, let alone with the offspring of that Nazi, whom I’ve read all about.’
‘She’s not really German,’ Gerry felt obliged to explain. ‘She was brought up and educated in England and Europe. Not that it makes any difference, since she’s out of my life now.’
He felt real pain in saying it, but his mother, obviously not feeling the same, said, ‘Well, I’m sure it’s all for the best, dear. Water finds its own level.’
There was another lengthy silence that seemed, to Gerry, to be some kind of black hole into which he could hurl his grieving soul and lose it forever.
‘So,’ his mother said eventually, sounding highly suspicious, ‘you intend staying on in London, whether I like it or not.’
‘Yes,’ Gerry said firmly.
‘And if I don’t finance this latest lunacy?’
‘I’ll starve,’ he said, ‘but I’ll *still* stay.’
‘I don’t seem to have too much choice, do I, dear?’
‘Well, if you *don’t want* to help me,’ he replied, sensing his moment, ‘then you *don’t have* to help me. On the other hand, I’m staying here anyway. It’s just a matter of *how* I stay – comfortably or miserably.’

‘And how much would you need to be comfortable, dear?’
Having planned to stay for three or four months, Gerry said, ‘Six months. I need enough cash to last me at least that long – then, whether successful or not, I’ll come home, I promise.’
‘How very thoughtful,’ his mother responded.
‘So, are you going to send me some money?’
‘Of course not,’ she said. ‘I’ve never heard such nonsense in all my life. Flying saucers, ghosts, precious stones and mad Germans – you’ve obviously made all of this up for some reason or other.’
‘I haven’t!’
‘*My* belief,’ his mother went on, completely ignoring his cry of protest, ‘is that you’re involved in some way with that young woman you mentioned and are staying in England in the hope of seeing her again, assuming she’s not already sharing you bed.’
‘I’m not! She’s not!’
‘Or, if that’s not true, you’ve simply got this bee in your bonnet and are going to squander the money in pursuit of a highly nonsensical theory. So, dear, no, I won’t be sending you the money – and my suggestion is that since you are presently devoid of cash, you simply use your American Express card to purchase an airplane ticket back home, when we can discuss all of this much more sensibly, in decent surroundings.’
‘I’m not coming home, Mom!’
‘I’m your mother, not your mom, and I’m hanging up right now. I’ll expect you home in a day or two. Goodbye, son. Be sensible.’
The line went dead when she hung up, and Gerry stared at his own phone, wanting to eat it or smash it, outraged that his mother didn’t believe him and was leaving him in penury, doubtless hoping to pressure him into flying home.
‘Well, you *won’t*!’ he snapped. ‘Damn you!’
He slammed the phone back onto its cradle, then went to the window and looked down, feeling defeated. Below him, on the sunny street, one of the colourful Rastas, his plaited hair decorated with beads, was strumming a guitar and singing while his friends clapped rhythmically and added vocal counterparts. Their very happiness was a slap in the face to him, and as he stood there, looking down at them, he felt the tides of defeat washing over him to drown his aspirations.

Without money from his mother he had no chance of staying on in this country, let alone hiring an assistant and pursuing, wherever it might lead him, the mystery of SaintGermain and the Tuaoi Stone.
Dwelling on this harsh reality, and having difficulty in accepting it, he muttered a soft oath to himself and then left the apartment.
Outraged and in despair, he determined to spend the last of his cash on getting drunk and letting tomorrow take care of itself. This he did, plunging into the noisy, smoky atmosphere of a typical London pub and drinking one pint of ale after another. Drunkenness came soon enough, illuminating his confused thoughts, increasing his more naive tendencies and almost making him stupid.
Almost, but not quite, since, when he found himself engaged in drunken banter with a tattily dressed peroxide blonde and was invited back to her place, he was sensible enough to think of AIDS, herpes and syphilis, and also thought, with real pain, of what he owed to the memory of Ingrid, so resolutely stood up, waved the blonde goodbye, and unsteadily left the pub.
Returning to his modest apartment, and realizing that he had just spent the last of his hard cash, he decided to phone those who had replied to his advertisement for a Personal Assistant and were due to be interviewed by him the following day. However, instead of doing that, he stretched out on the bed for a brief rest and fell into a troubled sleep, during which he first dreamed of Ingrid naked beside him in the bed, then had another dream, a much less pleasant one, about his beloved Ingrid's awful father, the monstrous Wilhelm Zweig, getting his hands on the Tuaoi Stone and using its powers to set himself up as overlord of the whole world.
In his dream he saw smouldering cities, mass graves, desolation, thousands being enslaved in some fearful future where Zweig had dominion. There was fear and suppression, a widespread despair, and Zweig's face took shape out of the dark clouds gathering overhead. First Zweig, then Saint-Germain, then his mysterious, ghostly partner… each emerged from the other, became the other, all as one, then merged back into the vast desolation of the abused and forsaken.
Yes, he dreamt of a new world, one of masters and slaves, then saw lightning strike a wall, burning the number 'one' into it, was hypnotized by that number, started dissolving into it… and was jerked from his dream – or, more accurately, from his nightmare – by the shrill and incessant ringing of his

telephone, which seemed to drill through his brain.
First groaning, then cursing, he sat upright, shook his head to clear it, then swung his legs off the bed and walked to the phone. He was unwashed and unshaven, his clothes shabby and dishevelled, and he ran his fingers through his uncombed hair and picked up the receiver.
'Yeah?' he said.
'Gerry? Is that you?'
'Yeah,' he repeated, unable to believe who he was hearing, his heart racing instantly.
'It's me, Gerry. It's Ingrid. I'm calling for that job you advertised. I'm in London, Gerry.'
He heard the singing of birds.

Chapter Two

With the helicopter roaring all around him and the wind beating through his thinning hair, Zweig glanced down through sunlit haze at his fleet of thirty high-powered boats, which formed an immense circle with a dot (his own boat) in the centre, about halfway between the Brazilian Basin and the Mid-Atlantic Ridge.

He felt pride, but little else. Not even pleasure. Certainly not after the hell he had recently been through – first, all those filthy Arabs along the Nile and in Cairo; then the flight of his daughter, Ingrid; finally, the awfulness of arriving in Recife at the height of another of their damned carnivals, with the already narrow streets rendered impassable by cheering crowds, noisy bands, and the customary dance performance of the *caboclinhos* in their ridiculous Indian garb, who had merely added to the already atrocious bedlam by beating rhythmically with their bows and arrows while leaping and spinning like whirling dervishes, making way for the procession of king, queen and chanting *tirador de loas*.

He had been greatly relieved when his limousine had managed to break through the primitive madness and carry him on to what had once been the relative tranquillity of his lavish villa in the southern suburb of Boa Viagem, but even there, when he attempted to go for his evening stroll along the palm-

fringed promenade, he had found himself hemmed in by horrible tourists and madly jogging Brazilians of a pedigree that could not have afforded this neighbourhood just a few years ago.

Nauseated, he had retired early to his bed in the villa, and there, with the sound of the Atlantic in his ears, had slept an uneasy sleep, filled with dreams of his daughter, the American lout, and Count Saint-Germain.

He had felt only relief when, the next morning, his helicopter had taken off from Guararapes Airport and carried him through the pure morning air to the relative peace of his floating empire near Ascension Island, not too far from the island of St. Helena, where another of his heroes, Napoleon Bonaparte, had spent his final days of despair and humiliation.

Shuddering at the thought of what could happen to the world's finest, he settled back into his seat and sucked on a tablet as the helicopter descended towards the fleet and made his ears pop. Having sent Hans and Elena on ahead, in order to gain himself an evening's privacy in his villa, he was eager to get back to business, particularly his pursuit of the legendary Tuaoi Stone, starting with a constructive business chat with Hans.

The helicopter dropped lower, almost directly over his own 170-foot boat, whipping up the waves in surging arcs of white and blue, as it hovered briefly over the swaying helipad, then began its final descent. It soon touched down, bouncing lightly on the deck, then came to a rest.

Zweig unclipped his safety belt and let himself be helped out of the helicopter even before the rotor blades had stopped turning. Hurrying away from the still-whining machine, he stopped just outside the area of turbulence caused by the slowing rotor blades and gazed around him with pride at the many other high-powered boats that were forming a protective cordon around him in the choppy green-blue waves of the South Atlantic.

Taking a deep breath, he nodded curtly at those saluting him, then saw that Hans had been waiting for him in the doorway that led into the upper saloon, or lounge.

‘So,’ Zweig said, ‘it is good to be back, *ja*?’
‘Yes, sir,’ Hans replied.
Zweig nodded and glanced around him again at his

watery domain, then let Hans lead him through the saloon and down to the lower deck, into the master cabin containing his surgical bed, spa bath, steam bath and Jacuzzi.

Elena was in the Jacuzzi, enjoying the warm, swirling water, her blonde hair protected by a plastic cap that emphasized her large eyes. When Zweig entered the cabin, she turned those eyes upon him, not without trepidation.

‘Hi,’ she said. ‘Welcome back.’

Zweig bent down, kissed her on the forehead, then straightened up again.
‘Thank you,’ he said. ‘I have to discuss some business with Hans, but once that’s done, I’ll join you. Perhaps a drink in the meantime?’
‘Champagne?’
‘Well, you’ve certainly developed expensive tastes.’ Nevertheless, he pressed a buzzer to call the steward in, gave the Filipino his order and waved him out again. He then snapped his fingers, pointed to the nearest chair, and said, ‘So, Hans, sit down. I want to hear what you’ve been up to since you returned. Not sleeping, I trust.’
‘No, sir,’ Hans replied, pulling the chair out, but waiting until Zweig had seated himself before also sitting down. ‘I’ve been looking into our affairs in general, and also checking on your daughter’s whereabouts. Regarding the latter, we have confirmation that Ingrid did indeed fly to Heathrow Airport, London.’
Though feeling a flush of rage, Zweig simply nodded acknowledgement.
‘She’s been staying for the past fortnight in a modest hotel in the Bloomsbury area, and to date has not contacted the American, presumably because she doesn’t yet know where he is. However, a telex received an hour ago from our offices in London states that someone placed an advertisement in the *Guardian* newspaper, asking for a Personal Assistant with experience in historical research. We can’t yet confirm that this is Remick, but it’s being checked out right now, because it’s our belief that if it *is* Remick, Ingrid

might also see the advertisement and find the American through it. Should that be the case, we will, as you requested, abduct her before she gets to him and bring her back here.'
'Good. And what about the American lout, if it is indeed him?'
Hans sighed sadly and lowered his long-lashed eyes. 'He will, as you requested, be terminated in a manner that makes his death look like suicide. Ingrid will then be informed of his death, and there the matter will rest.'
'*Sehr gut*,' Zweig said. 'Excellent.'
At that moment, the door opened and the Filipino steward returned with a bottle of chilled Moët & Chandon Grand Vintage champagne and two flute glasses on a silver tray. When he had poured the drinks, he handed Zweig and Elena each a glass, then bowed his way back out of the cabin and closed the door quietly.
Ignoring the fact that Hans was dabbing sweat from his face and licking his thirsty lips, Zweig raised his glass to Elena and then had a sip.
'So,' he said, removing the glass from his satisfied lips. 'That takes care of my daughter and the American. Now what about other business?'
Hans coughed nervously into his clenched fist before replying. 'Alas, the situation isn't good. In the past, as you know, we've been able to conduct most of our international business transactions with minimal legal restrictions by the simple expedient of operating from this fleet and – '
'*Ja, ja*, I know that!' Zweig interjected, thinking with pride of the numerous corporations he headed anonymously in many countries, while ensuring that his own domicile was this fleet anchored outside territorial waters, thus beyond the reach of international law.
'So,' Hans continued with maddening solemnity, 'we have been able to amass a considerable fortune, along with great political and fiscal influence, from our extensive international trading in armaments, gold bullion, various pharmaceutical products, and the purchase of valuable works of art.'
'You mean the *theft* of valuable works of art,' Elena corrected him.
'Be quiet,' Zweig said, starting to feel uneasy. 'This is no time for frivolous remarks. This is *serious*, Elena.'
'Unfortunately,' Hans continued, again coughing nervously into his clenched fist, as if frightened by what he had to say, 'over the past year or so there's been a noticeable increase in media exposés of our so-called manipulation of international laws to suit our own ends – '

‘Bastards!’ Zweig whispered.
‘ – and as a consequence, the major Western powers can no longer feign ignorance of our activities, which in the past they had done for their own benefit.’
‘Naturally,’ Zweig said. ‘We are offering the hypocrites a service they could not do without.’
Hans shrugged. ‘They may still want the services we provide,’ he said, ‘particularly in the area of armaments and other potentially embarrassing purchases; but the unprecedented build-up of adverse media publicity about our activities has forced them to agree publicly that action must be taken to curtail our unlicenced operations.’
‘And how do they intend doing that?’
‘By the application of sanctions,’ Hans replied. ‘The countries involved in this, mainly the United States and Europe, have started applying sanctions against those countries dealing with us – particularly Soviet-backed Third World countries – and those sanctions, along with other legal restraints, are gradually crushing the life out of us, most commonly by attacking our holdings in their respective territories.’
‘Bastards!’ Zweig said again, this time much louder.
‘For the past six months or so,’ Hans continued remorselessly, ‘we have found it increasingly difficult to either purchase or sell armaments; our income in that area is therefore down approximately seventy per cent. Even worse is that the tax departments of the United States and the European Economic Community are investigating our financial affairs and have already prevented the transfer of our most recent assets to off-shore tax havens. The only revenue still out of their reach is that being held in Switzerland and a few other off-shore havens; but even that’s dwindling rapidly because of our general lack of trading and inability to shift cash on the open market. In short, we can no longer trade with, or within, the United States, the British Commonwealth, or Europe.’
Zweig took a deep breath, opened and closed his restless hands, then let his breath out again and collected his thoughts.
‘And the Soviets?’ he asked.
‘The Soviet Union has refused to cooperate with any of the aforementioned powers,’ Hans said, ‘and has therefore become, willy-nilly, our sole source of future revenue and our only remaining area of influence.’

‘Damn!’ Zweig exclaimed. Then, before he could stop himself, he had swung his fist over the table to send the champagne bottle and glasses flying across the room. They exploded against the far bulwark, just above the Jacuzzi, with shards of glass spraying out and raining down on the floor, not too far from the shocked Elena who let out a frightened shriek.

‘*Damn*!’ Zweig repeated, even more explosively, then he picked up the table and threw it across the cabin, this time in the opposite direction, well away from Elena. It was still bouncing noisily off the bulwark, one of its legs already broken and spinning towards the door, when, exhausted by his outburst and feeling slightly embarrassed, Zweig dropped back onto the divan and found himself staring in a vague, distracted manner, first at Elena, clearly unnerved in the normally soothing Jacuzzi, then at Hans, who was still seated, rigid with tension, where the table had been.

‘It’s alright,’ he said to Hans, feeling the need to make amends and waving his hand in a gesture of dismissal. ‘It’s not your fault. Nor *mine*. These are circumstances beyond our control, and that’s all there is to it. Nevertheless, something has to be done or we’ll be doomed. *We’ll be doomed*!’

The sound of his own voice shocked him (that unfamiliar, shrill hysteria), but he managed to regain control of himself while wiping sweat from his brow.

‘Elena,’ he said, ‘get out of the Jacuzzi. You’ve been in it long enough for one day.’

‘I *like* the Jacuzzi,’ she replied on a nervous impulse.

‘You’ll like the back of my hand if you receive it, which you will if you don’t get out of that Jacuzzi and get decently dressed. Think of Hans here, if nothing else.’

Shrugging, Elena stood up, stark naked, in front of Hans, and reluctantly started putting on her dressing gown, which, being soaked by the water, clung seductively to her ripe body. Hans carefully lowered his eyes to avoid staring at her.

Zweig sighed. ‘I will never forget my experiences at the hands of those Soviet bastards when they raped Berlin in 1945 – yet now I have to deal with the sub-human swine. Well, so be it. Time waits for no man. Hans, kindly arrange a meeting with that ill-mannered cretin, Colonel Andropov Kuragin, who has long been wanting a larger contribution from our hoard of arms, and I’ll try to come to an agreement and make up for our losses. But in order to rescue us completely we need only one thing – the legendary Lodestone, or

Tuaoi Stone.'
Elena tightened the belt of her expensive dressing gown, then sauntered up to him, her hips swaying sensually. She stopped in front of him, placed her hands on his shoulders, leaned suggestively against him.
'Yes,' he said, suddenly wanting to get rid of Hans, 'we will simply direct more of our attention toward those swinish Soviets and play them off against the Western powers. While not making up *completely* for our losses, this will at least buy us enough time to pursue the Tuaoi Stone, which we now know to be in the care of Count Saint-Germain. So once I've met our good friend, Colonel Andropov Kuragin, and arranged increased trade with the Soviets, I'll give my full attention to the finding of the mysterious Count Saint-Germain and, through him, the Lodestone. Now please go and fix up the meeting. Elena, come closer!'
Unable to inch any closer than she already was, Elena pressed her belly against Zweig as Hans retreated hastily from the cabin, his face bright red with embarrassment. When Hans had gone, Elena smiled and knelt between Zweig's outstretched legs. Her large eyes, which pretended to be admiring, were admirably cautious.
'Do you want me badly?' Zweig asked. 'Do you *need* what I have?'
'Oh, yes,' she whispered.
He had to smile at that, but then closed his eyes, remembering Egypt, the cruise along the River Nile, his treacherous daughter, Ingrid, and that crude American, Gerry Remick, recalling how they had, with Hans, rushed out of the Great Pyramid, all of them obviously stunned by their experience inside it.
Count Saint-Germain, he thought. *That scoundrel – or magical genius. Certainly history's most mysterious man… and possibly still alive…*
He shook his head from side to side, feeling bewildered, disbelieving his own thoughts, then tried to accept that it was actually possible… that the Lodestone, the legendary Tuaoi Stone, truly existed.
'Oh, you're *big*,' Elena said, breathing upon him, exciting him. 'You're so big, so strong, so *hard*… What woman could possibly resist you?'
He felt her warm breath, her pliant lips, her tongue's sensual lapping. Then he briefly thought of Ingrid, Gerry Remick, their flight to freedom; felt the rage boiling up to give him back his strength while Elena's lips and tongue, as soft and smooth as worms dipped in honey, worked their wonders upon

him.
‘You have the best,’ she murmured. ‘I’ve never seen another like it. I want it night and day, every way, and I need it right now. It’s so powerful, so ruthless, so *unbending*, there’s no way to resist it. Oh, I want it… *Right now*!’
The lying bitch was irresistible. She knew just what she was doing. He heard her, felt her, surrendered willingly to her, pushing up to let her drink of his outpouring maleness, accepting her sly deceits as he cried out in ecstasy, despising himself even as he shuddered and gasped with relief, losing himself all too briefly.
‘I want my daughter,’ he groaned.

Chapter Three

‘So I flew directly to London,’ Ingrid continued, sitting close beside Gerry on the settee in the bric-a-brac apartment in Notting Hill Gate, feeling that she had wings, had flown towards the sun, and was glowing with a soft, febrile warmth, ‘and booked into a hotel in Bloomsbury, not knowing how to find you, convinced that I probably wouldn’t, but determined that no matter what happened, I wouldn’t return to my father. Then, yesterday, when I saw that advertisement in the newspaper, I knew it could only have been placed by you – and so, after thinking about it all night, I worked up the courage to call you.’

Her hand was resting in his, and she saw his uncommonly bright blue eyes registering surprise, perhaps hurt or confusion.

‘You had to work up the *courage*?’ he asked her. ‘Why? You *know* how I feel about you, what I told you. You should have called straight away.’

She felt herself blushing and had to lower her eyes. ‘I know what you told me,’ she said, ‘but couldn’t be sure if you meant it. After all, I’m not that attractive – ’

‘You are!’
‘ – and as you said to me, regarding another matter, when you’re in a new country, a very strange and different country, as we both were in Egypt, it can

play tricks on the mind.'
'And that's what you believe my feelings for you are? A mere trick of the mind?'
'Well, I *hope* not. It's just that… *You* know!'
Feeling hot and confused, bereft of further words, she was relieved when Gerry squeezed her hand again and tugged it into his lap.
'Damn it,' he said, 'I love you. I know it. And you must know it, too. Come here,' he said. 'Close your eyes.'
She felt his lips pressing upon her own, and she trembled, dissolving, concentrating on his kiss, shaken by its softness, its tenderness and warmth, automatically opening her own lips and responding inexpertly. She had wings and was flying, soaring away from doubt and fear, and only returned to Earth with great reluctance when he pulled away from her.
'You've got to learn to kiss better than that,' he said, 'but don't worry, I'll teach you.'
She saw only his blue eyes, bright with intelligence, oddly naive, his face solemn and particularly attentive, as if pondering her nature.
'Oh, yes,' she responded, surprised by the husky, sensual sound of her own voice, 'you do that, Gerry. Do it *right now*.'
Unfortunately, he didn't. Instead, his brow wrinkled as if in confusion, then he scratched distractedly at his nose.
'Right *now*?' he said. 'Right now we have to work out what to do.'
'So,' she said, 'here I am. I'm at your disposal. You don't need to hire an assistant. *I'll* be your assistant.'
He stood up and started pacing the shabby room, his unshaven face thoughtful.
'Well, I don't know…' he began.
'I'm perfectly capable, Gerry. I speak four languages fluently, have a BA in History, can type, take dictation in shorthand and use a word processor, if necessary. Also, I've already travelled a lot and have time on my hands. What more do you want?'
He stopped pacing the floor and stared at her with what she felt was slightly melodramatic grimness.
'It might be dangerous,' he said.
'I don't care,' she replied, meaning it. 'I've left my father for good, I'll never go back voluntarily, and since coming to London, during those two long,

empty weeks in my hotel, I've spent a great deal of time thinking about my past, about how my father physically abused my mother and then mentally tortured me, and decided that not only would I never return to him, but that I'd avenge myself on him by frustrating his search for the Lodestone, which is what he most wants in all the world. My father is evil, Gerry. I've finally managed to accept that fully. And accepting it, I've determined to do something about it, no matter the cost. To hell with the danger. I don't care. I'm going to help you.'

It was the longest speech she had given in her life and upon completing it she felt breathless, highly emotional, slightly embarrassed, but also exhilarated and free, no longer chained by self-doubt.

Gerry was staring at her, as solemn as an owl. He didn't speak for some time, as if surprise had rendered him speechless, but then he took a deep breath, shook his head from side to side, ran his fingers through his already ruffled hair and whispered, 'Oh, boy!'

He started pacing the room again, a genius in deep thought, but eventually stopped in front of her, wrinkled his brow, and nodded affirmatively.

God, he was sweet.

'Okay,' he said. 'Let's work it out logically. And the first thing is to recall what actually took place in the King's Chamber of the Great Pyramid. So, what actually happened? First, that bizarrely dressed apparition who looked like Saint-Germain specifically told Hans that he, meaning your father, couldn't have the Lodestone and would be doomed if he tried to pursue it – so he *knew* your father was hoping to find it. Next, he stared right at me – no mistake about *that* – and told me that I had to know that the first number is "one". So what does that sound like?'

'Like he was warning my father off his search for the Lodestone, but encouraging *you* to try and find it.'

'Exactly… And the first clue we have is the number "one" in some shape or form.'

'Which gets us nowhere.'

'Right. Because that number could mean anything. But it *does* mean that sooner or later we're going to have to remember that that particular number has a certain relevance – and in the meantime, the only thing we have to go on is the identity of Saint-Germain. We need to know about Saint-Germain, who he is, *what* he is, and I'm convinced that I've heard the name before,

though I can't place it just yet.'
'You think it's his real name?'
'Maybe, maybe not. It's possibly a pseudonym, but if it is, I think it's based on a real person, living or dead.'
'It's European,' she informed him. 'Saint-Germain… France, Germany… or ancient Bavaria.'
'Right,' Gerry said. 'And we can check it out easily. Particularly if it's the name of a real person, which I think it is.'
'The British Museum Reading Room?'
'Yes, Ingrid, that's a good place to start.'
'It's not that easy to get in there, Gerry.'
'Why?'
'You need a special pass card that includes an identifying photo.'
'We're not talking about Fort Knox, Ingrid.'
'I mean it: that's what you need. To get it, you have to be a local student, academic or professional researcher. And you're not even *English*.'
Gerry grinned at her, filling her up with warmth and a languorous wanting.
'I'll get around that,' he said. 'What I can't get around is the fact that I'm broke and this investigation could take weeks, maybe months, and involve lots of travel, meaning money. So! No money, no honey. We're stopped dead in our tracks, ducks.'
'Ducks? Did you say *ducks*?'
'That's an English expression, Ingrid. I pick up on these things pretty quickly. That's what makes me so smart.'
She knew he was smart, but she didn't care right now. She just wanted him to hold her, squeeze her tightly, press and stroke her; to kiss her and teach her to kiss properly and let her take wing again. *Oh, do it*, she thought. *Don't just stand there being bright*… But he just stood there, being bright, his brow furrowed, wanting to save the whole world.
'*I* have money,' she told him. 'I have a *lot* of money, actually. I've certainly got enough for what we need, so let's start straight away.'
'I don't think you'll have enough.'
'Yes, Gerry, I have. I have enough to last us both for months – and perhaps even longer.'
'You have?'
'Yes, I have.'

When previously telling him about her flight from the hotel in Cairo, she had omitted the theft of her father's hard cash. Now, she told him, taking pleasure from recounting how she had rifled all her father's drawers and clothes. After informing him that the total amount stolen was in the region of 20,000 US dollars, she was taken aback to see his bright blue eyes widening with disbelief.

'You *stole* twenty thousand bucks from your dad?' he asked incredulously.

'Yes,' she confirmed with pride.

He whistled softly. 'Wow! I can't believe my own ears. You're just full of surprises.'

This time, when she felt the blush on her cheeks, she realized she was blushing with pleasure instead of her normal humiliation; and when Gerry grinned at her, with his admiration obvious, she blushed even more.

'This is beautiful,' he said. 'It's just too sweet to swallow. We not only keep that bastard from getting his paws on the Lodestone, but use his money to finance *our* search for it. What an irony. *Wonderful*!'

'Do you think the Lodestone really exists?' she asked him.

He shrugged. 'I don't know. But *Saint-Germain* certainly knows whether or not it actually exists – and if it *does* exist and we're to find it, we'll only do it through him.'

'Which gets us back to the British Museum Reading Room, for which we'll need passes with photographs.'

'No problem,' Gerry said, clearly enjoying himself. 'What are the rules?'

'Normally you have to have a genuine purpose for being there – some kind of research – and it has to be something pretty serious.'

'You mean I'd need a letter of authorization?'

'Yes. A letter from some respectable company or university.'

He didn't pause for a second. 'Okay. We both need passes. So let's go to one of those instant-print shops and run off a set of letterhead paper with a reputable publisher's details printed on it. Obviously we'll have to waste most of our print run, since we'll only need two sheets for two letters, one for you and one for me, both stating that the publisher has commissioned us to co-author a book on…' He thought about it and then grinned again. 'Let's say the French Revolution… And then, with those letters, and a couple of passport photos from a coin-machine, we can pick up our Reading Room passes. You think that'll work?'

‘Yes, Gerry, I do.’
‘You’re hired, Ingrid. *Definitely*.’
Still grinning, he stepped closer to her and she stood up automatically, only aware of her need to be near him and give herself, body and soul, to him in order to find her lost self. She raised her head and closed her eyes, embarrassed by her inexperience, wanting him, but stiffening with tension at the thought of what he might do to her. She felt his hands sliding around her waist, fingers pressing against her spine. When he tugged her gently against him, his body seemed to be electric, but she stiffened even more when he kissed her and pressed her tightly to him.
Then he must have sensed her involuntary, helpless fear, since his kiss, which had exalted her even in her fear, was all too abruptly terminated when his hands, moving down from her shoulder blades and spine, came to rest lightly on her hips and then pushed her away from him.
Trembling, she opened her eyes to see his troubled gaze.
‘What’s the matter?’ he asked her.
‘Nothing,’ she lied.
‘You don’t *like* me kissing you?’
‘Oh, I do!’ She felt desperate. ‘It’s just that…’ But she let her voice trail off, not knowing how to explain it, not even wanting to *think* about her years of humiliation, her father’s sexual blasphemies; about the way he had abused her mother, often in front of her, the child, then later played about with his whores and mistresses while making her look on. She thought of her dreams in the sanatorium, those vivid fantasies of revulsion and shame, and wanted even less to tell Gerry what sex had come to mean to her: either power or submission, pain or humiliation, and always repulsively *physical*… No, she couldn’t tell him, at least not without losing him, so feeling torn between her love for him and her fear of letting him have her, she offered him a pained, concealing smile and hoped for the best.
He cupped her face tenderly in his hands, looking almost relieved.
‘It’s okay,’ he said. ‘That bastard. I understand. But it’s okay, I can wait, give it time. You and me, we’ll be alright. Let it take its own course. Right now, we’ve more important things to think about… such as getting that letterhead paper run off and some photos taken and then applying for our Reading Room passes. Let’s do that tomorrow.’
‘Yes, Gerry, of course.’

‘And what about where you’re presently living? You want to move in with me?’
‘No, Gerry, I don’t think so.’
‘You won’t have to…’
‘I know, but it’s not that. Well, it is. I mean, I’d *like* to, but I’m scared, so I’ll remain in my hotel in the meantime. Also, it’s located in Tavistock Square, near the museum, which makes it convenient.’
‘Right,’ Gerry said. ‘Fine.’
Did he look relieved as well? Or was she simply imagining that? Feeling flushed and pained, now confused by her own thoughts, as well as by how he was reacting to her, she studied his face, brimmed over with love for him, felt tears springing to her eyes, and then leaned forward, stood on tiptoe and kissed him quickly, unsurely.
He reached out, pulled her to him, hugged her, breathing heavily, then released her and let her walk to the door, feeling dizzy and weak with love.
‘So,’ she said, turning back to face him, ‘I’ll see you tomorrow.’
‘Right, Ingrid. As early as possible. What about ten in the morning at your hotel, since that’s near the museum?’
‘Fine. Ten it is.’
He ran his fingers nervously through his hair, then glanced out the window.
‘It’s dark,’ he said. ‘I’ll walk you to the station.’
‘No,’ she said quickly, suddenly needing to get away; wanting him too much to be able to stand her own fear of sex and feeling thoroughly ashamed of herself. ‘I’ll manage on my own, thanks.’
‘I’d rather walk you to the station,’ he insisted. ‘It’s not safe for a woman alone after dark, so let me at least take you that far.’
She smiled mainly to reassure him, but also out of amusement at his concern.
‘This isn’t New York, Gerry. It’s London. It’s a pretty safe city.’
He studied her thoughtfully, then shrugged. ‘Okay. If you insist.’
‘I do.’
Wanting desperately to be held by him, but scared of what it could lead to, despising her own cowardice yet sensing an odd shyness in him as well, she covered her confusion by opening the door, blowing him a kiss, then hurrying down the stairs of the gloomy Victorian house; and with a sigh of relief, of longing and frustration, left the building and stepped into the lamplit street, sniffing back her tears.

Chapter Four

After Ingrid had left the room, Gerry stood there for a moment, just staring at the closed door, feeling like a fool, like the virgin he *almost* was, and wanting to rush down the stairs after her and confess all *his* fears. Resisting this urge, he simply clenched his right fist and knocked it repeatedly against his lowered forehead, to punish himself. Having done so, he glanced around the small apartment, wondered how he could survive in such a dump, and then hurried over to the window to catch a final glimpse of his beloved.

Just as he looked down, Ingrid stepped off the pavement and started across the dark, lamplit road, heading for the other side of the street. She was wearing a fulllength summer coat that seemed more fashionable than her customary clothing, but her hair was still piled primly on her head, her shoes were flat-heeled and plain. Nevertheless, as she crossed the empty road, moving in and out of lamplight, he felt himself pouring out to her on a wave of emotion. He wanted to call her back, take her clothes off and make passionate love to her… but he just couldn't do it.

'You god damned hypocrite,' he said softly to himself. 'You're just as frightened as she is. Still a dumb adolescent.'

Well, it was true, wasn't it? As he stood there looking down, he thought of the few other times in his life when he had been involved with members of the opposite sex. Very few indeed, spread thinly over the years, beginning when he was a sophomore and fumbling awkwardly, frustratedly, in the back of an automobile; proceeding a few months later to seduction by an older woman, then a few wellspaced modest experiences in between. Nothing permanent there, certainly nothing too successful, giving rise only to the conclusion that he was too *intelligent* for sex, that he really thought it a messy biological urge that was a lot more trouble than it was worth.

Well, that was *his* excuse.
Yet as Ingrid crossed the street, mounted the pavement at the far side and walked along it, moving in and out of shadow and yellow lamplight, he was

swept by love for her, by the need to possess her. All his previous carnal relationships had been brief and unsuccessful – his own awkwardness had embarrassed him – and now, though he desperately wanted Ingrid, he hardly knew where to start.

God, he thought, as he watched her moving off along the footpath, a lonely figure in that empty street, *I wish you were Mata Hari, a man-eater… I wish* you *would take* me.

Feeling foolish, he sighed, deciding to think of other things, but could only focus on the eerie, lamplit darkness, thinking of all the dangers in a city in the dead of night… Yet that was foolish. This was London, after all. As Ingrid had said, it was a pretty safe city and there was nothing to worry about…

Yet even as he was thinking this, an icy fear poured through him, as if injected into his veins. Temporarily frozen, only aware of his racing heart, he had a sudden, sharp vision of the face of Saint-Germain, blinked, looked down again, and saw Ingrid still on the footpath at the far side of the road. A grey-suited man, imposingly broad and tall, had clambered out of an Audi car parked near the kerb and was hurrying after her.

'Oh, shit,' Gerry murmured.

On the instant, as his fear turned to immobilizing panic, he knew with certainty that the man in the grey suit was hurrying to catch up with Ingrid – and indeed, as the oblivious Ingrid continued walking at a normal pace, the man suddenly sprinted forward and reached out to grab her.

'Ingrid!' Gerry bawled in vain, his hands pressed uselessly against the closed window of the apartment, as the man was about to take hold of her.

Then, inexplicably, the man seemed to change his mind, abruptly stopping his rushed advance, letting his hands fall back to his sides, and glancing towards the alley to his right where, as the still oblivious Ingrid walked on, out of Gerry's range of vision, a pool of brightening light had formed.

Clearly dazzled by the light, perhaps knowing what it was, the man took a hesitant step backward as another man, silhouetted in the increasing brilliance of the eerie light, emerged from the alley and walked towards him.

The grey-suited man flung a hand protectively over his eyes and was just about to turn away and flee when the silhouetted figure grabbed his shoulder. At that, the greysuited man quivered like a bowstring, was surrounded by an unearthly phosphorescence, went into what looked like an epileptic fit, and then collapsed to the ground.

Gerry didn't wait to see any more. He turned away from the window, opened the door, hurried down the stairs and out into the street. Hardly able to think straight, oblivious to danger, he hurried across the road as that unearthly light in the alley flared up into a brief, blinding radiance, then abruptly blinked out.

Temporarily dazzled, Gerry stopped on the opposite pavement, rubbed his stinging eyes, then looked down at the man lying near his feet. The man's jaw was slack, his wide eyes reflecting the lamplight, his body frozen in the contortions of his final agony. The skin on his face and hands was scorched – and he was obviously dead.

'Shit!' Gerry exclaimed. 'Jesus!'

There was no sign of Ingrid.

Almost sobbing, he ran to the alley on his right, looked in and saw nothing but unlit darkness. Perplexed, but even more concerned for Ingrid, he raced on along the street, hoping to catch up with her. He didn't. She was nowhere to be seen along the route to Notting Hill Gate underground station.

Either she had been abducted or she had already caught her train back to Bloomsbury.

Disappointed, he hurried back through the dark, empty streets until he reached the pavement opposite his building.

The dead man who had been lying there had disappeared – as had the Audi car parked father along the kerb.

Aware that his heart was still pounding, and finding it increasingly difficult to keep a hold on his sense of reality, Gerry returned to his apartment, poured himself a whiskey, drank it while giving Ingrid enough time to get to her hotel, and then, so filled with tension that he was hardly able to breathe, he picked up the telephone and dialled her number. The operator promptly put him through to her room.

'Yes?' Ingrid said.

Gerry let his breath out in a lengthy sigh of relief and said, 'It's me… Gerry.'

'That's nice,' she replied.

'You got back okay, then?'

'Yes, of course.'

'Good,' he said. 'I just wanted to be certain. Now make sure your door's locked.'

'Oh, Gerry!' she exclaimed, obviously amused by his concern, still not

knowing what had happened behind her back in that dark, dangerous street.
‘Just double check, Ingrid,’ he insisted. ‘I love you. Goodnight.’
He dropped the phone quickly, too choked up to say more, then had another whiskey, hoping to make himself sleepy, and lay back on the bed fully dressed, taking deep, even breaths before turning the light out.

Was he sleeping? Was he dreaming? He would never know for sure. Later he only knew that he had spent a long, troubled night, haunted by what had happened, trying to understand it, realizing that the man who had tried to grab Ingrid had obviously been one of her father’s men; and convinced that the other man, who had emerged from the light-filled alleyway, had been the same man he had first seen, in a similar unearthly phosphorescence, on the deck of the cruiser sailing along the Nile.

Either sleeping or awake, hardly knowing where he was, but chillingly aware that the people he was hoping to find were actually following him and Ingrid, he tossed and turned more restlessly, sweated a lot, then either in a dream or in reality felt his body encased in heat, compressed by fierce pressure, and opened his eyes to see that same unearthly light filling his bedroom.

He heard an almost palpable bass humming noise that made the stifling air vibrate.
And there, in that shimmering phosphorescence, stood Saint-Germain and his diabolically handsome partner, both of them staring directly, steadily at him, their lips forming half smiles.
There was nothing he could do. He was paralysed by the sight of them. He just lay there on the bed, pouring sweat, his heart pounding, his thoughts blanked out by that relentless bass humming, his muscles tightening into knots as the unnatural pressure squeezed the breath out of him.
He thought he was going mad. He also thought he was going to die. He tried to scream but failed, opening and closing his mouth in vain, struck dumb by the blankness in his mind and the breadth of his terror.
Saint-Germain was still smiling at him. The other man was hypnotizing him. He tried to break free, to resist, to make a noise or thresh his limbs, but felt his senses draining away into a deep well of fear.
Defeated, he closed his eyes and held his breath… and was instantly set free.

The heat and pressure disappeared, the bass humming receded, and he opened his eyes again to see a swirling white light shrinking until it was only a spark burning through the room's door. Then that also disappeared, returning his room to normal darkness, and he let his breath out in a sigh that filled up the silence.
He lay there a long time, still too terrified to move, looking repeatedly left and right, up and down, all around him, and only closing his eyes again with great reluctance, still too frightened to face sleep.
Was he sleeping or awake? He must have fallen asleep at *some* point. When he awakened the next morning, the room was normal, though his body was aching.
The fear was there to be fought.

Chapter Five

Feeling ten years younger after his two-week Fountain of Youth rejuvenation treatment course in the Flora Cure Hotel in Bucharest, Romania, Zweig finally felt up to the task of meeting the despicable sub-human, KGB colonel Andropov Kuragin. Indeed, he took particular pleasure in doing it without the aid of a limousine, instead walking all the way from Boulevard Poligrafei, past Piata Scinteii, along the wide, elegant Soseaua Kiseleff, with its many terraced restaurants and brasseries, to the webbed pathways and lakes of the city's playground, Herastrau Park.

There, in the restaurant Miorita, he was to have his very important meeting. Having already convinced himself that Kuragin would try that third-rate psychological ploy of deliberately turning up late, and preparing himself for it, he was first pleasantly surprised, then highly suspicious, to find the ruddycheeked, potbellied Russian, dressed in an unexpectedly decent grey suit, shirt and tie, already seated at his table in the expensive restaurant overlooking one of the park's many lakes.
'*Guten tag*,' Zweig said, feeling grumpy and refusing to speak Russian. 'So you got here before me.'
'*Ja*,' Kuragin replied cheerfully, standing up and stretching out his hand.
'*Buna seara*,' he said in fluent Romanian, obviously trying to make Zweig feel inferior. 'It is good to see you, my old friend.'

‘*Multumesc*,’ Zweig replied, determined not to be put down, then shook Kuragin’s hand, squeezing it tighter than necessary, and sat down before Kuragin could do so, after which, having regained the upper hand, he waved his right hand in an impatient manner and said, ‘Please, Andropov, be seated.’
‘Thank *you*,’ Kuragin responded, regaining his chair. ‘So, here we are again. Can I get you a *tuica*?’
‘I do not drink brandy even when made from fruit. A mineral water will suffice, thanks.’
‘Of course,’ Kuragin said. ‘Naturally.’
He called a waiter and ordered the drink, then offered a Russian peasant’s artificial smile.
‘So, Wilhelm,’ he said, ‘you would like to eat?’
‘I believe that was the general idea,’ Zweig replied. ‘And you said you were paying.’
‘But naturally, Wilhelm.’
Glancing occasionally at Kuragin over the top of his menu, Zweig was not unaware of the fact that the Russian’s moon-shaped, ruddy-cheeked, good-humoured face, with its son-of-the-soil attractiveness, was the pleasant mask hiding the death’s head of a dedicated communist who had been elbow-deep in blood many times. A survivor of Stalingrad, Kuragin secretly loathed all Germans and had put quite a few of them to death, often hideously, before the ending of the war deprived him of the pleasure. Since then, he had ruthlessly clawed his way up the slippery, bloodslicked ladder of Russian politics, surviving one purge after another, and was now one of the KGB’s most valuable operatives. He would deal with Zweig if he had to, but his cheerful countenance, Zweig knew, concealed a detestation equalling that which Zweig held for him.
‘You are ready to order, Wilhelm?’
‘Yes, Andropov,’ Zweig replied, deciding to cost him as much as possible. ‘I’ll start with the *oua umplute cu pire de spanac* and, perhaps, a hearty soup – shall we make it the *ciorba de perisoare*?’
‘A filling combination,’ Kuragin replied, not blanching at all, ‘but an excellent choice. And the main course?’
‘I believe the *muschi poiana* might do,’ Zweig said, ‘with perhaps a little *mamaliga* on the side, and some stuffed potatoes, such as *cartofi Bucovinei*.’

‘Clearly you are making up for your deprivations in the health clinic,’ Kuragin said, trying to make the comment sound like a joke but not quite succeeding. ‘However, I’m sure you can manage it.’
‘Oh, I’m *sure* I can,’ Zweig said, hardly able to conceal his pleasure. ‘And I’ll follow it up with a combination of *baclava* and cheese pie – the *placinta cu brinza* – with a couple of bottles of Murfatlar Riesling to wash it down. That should set us up nicely, *ja*?’
Kuragin’s smile wavered, but just managed to survive. ‘Yes,’ he said, ‘it should set *you* up nicely. My own appetite, however, is more modest, but please don’t mind me.’
For himself, he ordered only a small portion of skinless sausages, the *mititei*, a main course of *musaka* and dessert of apple pie, his peasant’s gaze taking note of the prices as the waiter departed.
‘So,’ he said, sinking back into his chair and trying to hide his outrage. ‘How are things with you, Wilhelm?’
‘I am having my problems,’ Zweig confessed, ‘but I’m sure I can sort them out.’
At that moment, one of the waiters returned with Zweig’s glass of mineral water. He drank it in one gulp, put the glass back on the table, wiped his lips with the back of his hand and glanced idly around him.
‘God,’ he said, ‘how I detest these Romanians. Is that why you meet me here?’
‘I didn’t know you detested them, Wilhelm. And I don’t understand why you do. After all, they entered World War Two on Germany’s side.’
‘And when the tide had unfortunately turned against us, they joined the Allies.’
‘Of all people,’ Kuragin said, ‘*you* should surely understand political expediency.’
‘I do not change my allegiances,’ Zweig replied. ‘I still stand by my *Führer*.’
‘Yes,’ Kuragin said. ‘Quite.’
The use of the word ‘quite’, so English and effete, made Zweig’s blood boil, but he diplomatically kept his peace and offered a lot of mindless small talk with the disgusting Russian while the meal was served and devoured. Aware that what he was eating would not aid his longevity – and would, indeed, set back all the good work done during the past two weeks in the Flora Cure Hotel – but unable to resist the chance to feed off the despised Russian’s

expense account, he enthusiastically demolished his egg stuffed with spinach, lapped up his sour cream soup with meat balls, then tucked with relish into his main course of beef stuffed with mushrooms, bacon, pepper and paprika in a rich sauce of veal stock, tomato and vegetable purée, with corn mush and stuffed potatoes on the side.

'So,' Kuragin said, trying to make conversation while he picked at his *musaka*, 'you are having some problems. What might those be, my friend?'

'Problems?' Zweig said while stuffing his mouth with *mamaliga*. 'Not really *problems*. Merely a few aggravations.'

'Oh?' Kuragin said diplomatically, still picking at his food like an old woman minus her teeth. 'And they have bearing on us?'

'Alas,' Zweig said, 'yes.'

He was mindful of the need to tread with extreme delicacy when dealing with the cheerful, barbaric Russian, but equally aware of his need to repair the damage done in recent months. So, treading carefully, offering what was necessary but no more than that, he told Kuragin of his current plight, with particular emphasis on how the Americans and the European Economic Community were applying sanctions against his numerous interests as well as curtailing all trade with him. When he was finished, he had a long drink of the Riesling and carefully studied the Russian.

'Ah, I see,' Kuragin said, dabbing delicately at his lips with his napkin in order to try to hide his growing pleasure. 'This doesn't sound too good at all, Wilhelm. At least not for you.'

'A temporary setback,' Zweig responded, wanting to strangle the Soviet slug. 'The solution is already at hand – and could benefit you.'

'Oh?'

'Yes, Andropov. You have, after all, been complaining for some time that I've been trading too much with the West while ignoring your own more pressing needs. Well, that situation can now be reversed. The Soviet Union will become my prime customer.'

Kuragin's triumphant smile was enough to make Zweig feel like puking.

'So,' the Soviet swine said, 'you refuse our demands for years and only now, when rejected by your allies, do you grant us this favour.'

'Of all people,' Zweig said, throwing Kuragin's words back at him, '*you* should surely understand political expediency.'

Kuragin's smile wavered, but did not entirely disappear. 'Quite,' he said.

‘However, much as I appreciate your kind offer, I should point out to you that it will only be accepted on the strictest of terms, by which I mean *our* terms.’
‘You think *I* would accept that, Andropov?’
‘I don’t think you have much choice. With America and Europe turning against you, we’re all you have left – so our terms it will have to be.’
‘I would not be so foolish as to come here to beg on hands and knees,’ Zweig said. ‘I have not come here to ask you for a favour. I’ve come to offer a trade-off.’
‘What can you offer now but your desperation?’
‘Power,’ Zweig said. ‘*Limitless* power.’
Enjoying his histrionics, he took even more pleasure from the way in which Kuragin actually stopped smiling and raised his right eyebrow.
‘We have talked before of the legendary Lodestone, or Tuaoi Stone,’ Zweig said.
‘Yes,’ Kuragin replied. ‘Of course. We have discussed whether or not it actually exists, and, if it does, if it really possesses magical powers. As you know, I believe it to be a myth, so why bring it up now?’
‘Because recent events have convinced me that the Lodestone, or Tuaoi Stone, *does* exist, is truly possessed of extraordinary powers, and can now, almost certainly, be located by me.’
‘Those are large claims,’ Kuragin said.
‘Allow me to convince you.’
Without naming names, and implying that he had *personally* witnessed the events described, Zweig recounted what Hans, Ingrid and the American, Gerry Remick, had experienced in the King’s Chamber of the Great Pyramid at Giza, tied those events to the death of his own men in the Waldorf Astoria hotel in New York, and finished by saying that he now knew the identity of the current protector of the Tuaoi Stone and could, therefore, given time and financial aid, track him down and wrest the legendary artifact from him.
Kuragin did not bite immediately, but Zweig knew he was going to.
‘Let me get this straight,’ Kuragin said. ‘You had been searching for the Tuaoi… Damn it, I cannot pronounce that name.’
‘Call it the Lodestone.’
‘Yes. You have been searching for the Lodestone for many years, and finally your personal assistant received an anonymous phone call telling him that if you still wanted the stone, it could be purchased from someone who would

come to a certain room in the Waldorf Astoria. A man did indeed go there for that meeting, supposedly to sell the Lodestone to your men, but a widely reported, apparently inexplicable, explosion devastated the room, killing your men, though the courier's body was never found. He had magically disappeared.'

'Correct,' Zweig said, feeling impatient.

'So whoever has the Lodestone, he certainly knows you're still trying to find it.'

'Also correct,' Zweig said, growing even more impatient.

'However, originally the men who died in the Waldorf Astoria were supposed to have met their contact on a cruiser sailing along the Nile, so after their untimely deaths, you took the same cruise and had reason to believe that the present keeper of the Lodestone was on board.'

'Yes,' Zweig said. 'And my encounter with him in the King's Chamber of the Great Pyramid,' he lied blandly, 'convinced me that he *did* possess the stone and had inherited its magical powers. Now, since I know who he is, I believe I can find him. When I do, I will wrest the stone from him and then hand it over to the Soviets, to use as they see fit.'

'And what would you expect in return?'

'You will pay me handsomely,' Zweig said. 'Initially in material wealth; later, when you have the Lodestone and thus can dominate the whole world, in the handing over to me of a reunited East and West Germany, which I can then rule as *I* see fit.'

'Ah,' Kuragin said with soft sarcasm, 'the Fourth Reich.'

'Correct again,' Zweig said, wanting to crush the gloating bastard. 'Once more there will be only one Germany – a *pure* Germany – and I'll ensure that it stays that way, under the umbrella of Soviet protection, since the Soviets will then rule the world.'

He avoided Kuragin's thoughtful, peasant gaze by tucking into his combined dessert of *baclava* and cheese pie, swilled down with more Riesling. However, he didn't miss the edge to Kuragin's voice when the Russian finally spoke again.

'Reportedly, he who owns the Lodestone can rule the whole world,' Kuragin said. 'So why, if you find it, would you not want to keep it yourself?'

'It's too big for me,' Zweig lied. 'The *whole world* is too big for me. I do not want the Slavs and the Poles and the Romanians; I do not want all the other

sub-humans or ignoble races. I only want my own New Order, a unified Germany purged of the impure and inferior; of all dissenters, Jews, homosexuals, mental defectives and radicals. I do not want the problems of the rest of the world to interfere with my country. I want East and West Germany reunited; the rest you can deal with.'

He knew exactly what the Russian was thinking. Kuragin was thinking that he, Zweig, wasn't thinking too straight; that he was so obsessed with his mad vision of a resurrected Third Reich, he had lost all his marbles and hadn't even considered that the Soviets, once in possession of the Lodestone, would simply renege on their promise and unite the divided Germany only to dominate it completely, as they would the whole world… But he, Wilhelm Zweig, was no mad visionary, had not lost his marbles, and had no intention of handing over the Lodestone once he had found it. No, he would encourage the Soviets to finance his search for it, and then, having found it, use it to blackmail the whole world, including the Soviet Union, into submission. The whole world was *not* too big for him to handle. It was, in fact, all he desired and could not live without.

'So,' he said, finishing his gross desert and washing it down with the last of the Riesling, 'do we discuss the terms of our trade or not?'

The normally cheerful Kuragin (he could have a good laugh while cleaning his murderous hands of blood) was looking unusually sombre right now. He stared steadily at Zweig for some time, his brow furrowed in thought, then eventually let his breath out in a sigh that sounded suspiciously like despair. 'Yes,' he said, 'let's discuss terms.'

An hour later, Kuragin had agreed to arrange for the shipment of a great deal of material wealth, including hard cash and invaluable art treasures (many of which, Zweig reminded himself with satisfaction, had been pillaged by the Russians from the Germans at the end of the war) to him within the month and to complete the rest of the deal when they were in possession of the Lodestone, or Tuaoi Stone (which, Zweig thought with even more satisfaction, they never would be). Zweig then shook hands with the Soviet slug and headed back across the park, past green lawns and lakes and the many Romanians out for a stroll, safe in the knowledge that he was actually being followed at a discreet distance by Hans and two well-trained, armed bodyguards.

The afternoon light was weak, making the park drab and gloomy, and he suddenly felt an odd melancholia that slightly dampened the ardour of his victory. Surprised by the feeling, wondering what had caused it, he tried to shake it off by reminding himself that he had won – that he had pulled off a coup and could now ignore the Americans and their allies – then wondered how to go about tracking down the mysterious Saint-Germain, whose name he had deliberately not mentioned to Kuragin.

Thinking of Saint-Germain, he then thought of the cruise along the Nile, of his daughter, Ingrid, and that American lout, Gerry Remick, and wondered if his men in London had managed to locate them yet. That the American might already be dead was of some comfort to him; that Ingrid might soon be back and at his mercy made him feel even better.

She would suffer as her mother had suffered – only more so, the treacherous bitch.
Briefly lifted out of his gloom by the thought of retribution, he looked straight ahead, along the path bounding a still lake, and saw a man stepping out from under some trees and stopping to stare intently at him.
He, also, stopped walking, frozen by the man's intensity, mesmerized by his darkly glittering, snake-like gaze and diabolical attractiveness.
The man said nothing to him, but he knew without doubt that the mesmeric gaze was directed at him.
Even as he accepted this, trying to fathom its meaning, but felt his senses slipping into chaos and confusion, his every thought focused on that diabolically handsome, smiling face, he was, to his horror, consumed with an unnatural, overwhelming *desire* for the stranger – his libido inflamed, his emotions in turmoil, his every nerve singing in tune with what appeared to be the stranger's magically amplified heartbeat, his body straining to either hurl himself upon him and either take him carnally or be taken by him.
Shocked, disbelieving, yet rapidly losing self-control, he was indeed just about to advance upon the man when his overwhelming desire changed abruptly to terror and he saw, in those seductive eyes, the portals of heaven or hell, the light-flecked darkness of the cosmos, and found himself taking a step backwards, as if for protection.
Jerking his head sideways, trying desperately to avoid that mesmerizing gaze,

he stared down at the still lake to his right – and was further assaulted.
The water started swirling, then turned into a roaring whirlpool, the vortex of which became the eye of a tornado that sucked him through the vacuum of the ether, into the countless stars and moons of an exploding galaxy. He felt himself sucked down, tumbling through the infinite, traversing time and space, and emerged to snow-capped mountains, glittering ice on frozen peaks, a great hall hacked out of solid rock and filled with a light mist.
Here another man, silvery-haired and seemingly ageless, was staring steadily at him.
He knew it was Saint-Germain. It could be no one else. He knew by the strangely haunted brilliance of that gaze, by the agelessness of the features beneath the noble brow and silvery hair, by the calm, unfettered arrogance of his stance, by the steel in his gentle smile.
Zweig felt himself collapsing, his legs too weak to support him, his limbs burning with an ethereal heat that made him think he was melting. He collapsed into himself, body colliding into spirit, then returned to Earth, to solid ground, when he fell to the grass.
He heard noise – thrashing branches, running feet, his own men shouting – and looked up to see the foliage springing back into place where the diabolical stranger had just been standing.
Zweig found himself lying on the grass beside the placid water of the lake. He was breathless, felt bruised and too hot, but appeared to be unharmed. He watched the branches of the trees settling back down where the mysterious stranger had made his escape, then looked up as Hans and the bodyguards reached down to help him to his feet.
‘What happened?’ Hans asked him, looking nervous. ‘We saw you fall and thought you’d been shot, but we didn’t hear gunshots.’
‘That man!’ Zweig bellowed, getting his breath back. ‘Go and capture that bastard!’
Hans and the bodyguards glanced at one another, all obviously bewildered.
‘What man?’ Hans asked. ‘We saw no one. Only you walking beside the lake. Believe me, sir, there was no one else.’
‘And over there? By those trees?’
‘We saw no one. *No one*!’ Hans shrugged and indicated the bodyguards.
‘Shall I still send them to investigate the area?’
Shocked and horrified, not only by his bizarre experience, or hallucination,

but by the extent of his carnal desire of that spectral stranger, Zweig walked resolutely to the trees, each step taking him closer to the terror that he had just shaken off. Taking a deep breath, he pressed the branches down and then looked beyond them.
He saw nothing but another stretch of park, some people, mostly couples, wandering to and fro.
All perfectly normal.
Shaken, confused, still trying to accept what had happened, he was just about to turn back to Hans and the bodyguards when he noticed that his hand, in pressing the branches down, had become covered with a fine whitish powder that smelt just like ash. Examining the leaves of the surrounding branches and bushes, he saw that they had been charred to a height of about six feet from the ground, as if scorched by some invisible heat source.
'*Mein Gott*,' he whispered to himself, remembering what Hans and Ingrid had told him of their experience in the King's Chamber of the Great Pyramid. 'It must be true. It was them! *Saint-Germain and his partner*!'
He stood there, dumbfounded, exhilarated and terrified, realizing that what he wanted was within his grasp
– and that all hell could be let loose.
Those he was hoping to find were following him… and their powers were spectacular.

Chapter Six

The five days Gerry spent with Ingrid in the British Library Reading Room were among the most enchanting of his life.

Enchanting because he could think of nothing to compare with the immense circular hall of the library, which could accommodate over four hundred readers, had a dome that could only be bettered by the Pantheon of Rome, and whose catalogue was the most extensive in the world. Enchanting, also, because he spent most of the time sitting beside Ingrid at one of the desks, poring over books with her, often holding her hand, stroking the back of her wrist, whispering as one did in a library or when in love, sometimes blushing at his own words of endearment and hiding his embarrassment by turning away from her to study the great hall.

The shelves curved around the room, the librarians were raised on high in the centre of the circle, the readers' desks forming spokes that radiated out from the numerous drawers of the General Catalogue and extended to the reference books and dictionaries, the encyclopedias and histories.

Gerry could have choked up just seeing it.
He felt awed and humbled when in the Reading Room, but he also felt bewilderment and the inexorable rise of fear as Ingrid, mostly solemn, but sometimes smiling shyly, filled out the application slips for books, questioned the whispering librarians, waited patiently beside him for the books on order to be delivered, then went through them with him as, together, they unravelled the mystery of the Comte de Saint-Germain, tracing his origins back into distant times, far beyond what seemed possible.
The revelations about Saint-Germain, coming one after the other, led Gerry from bewilderment to an excitement that was, much too often for comfort, not too different from disbelief. That Saint-Germain had existed was beyond any shadow of doubt. What Gerry found impossible to accept was the extent of his life.
The identity of the Saint-Germain encountered on the Nile cruise remained a mystery; but historical records revealed that a Comte de Saint-Germain had actually existed, yet was a man whose life defied common sense and appeared to be magical.
'According to Eliphas Levi, the nineteenth-century occultist,' Ingrid summarized in a whisper from her notes during their final afternoon in the great library, 'the Comte de Saint-Germain was born in Lentmeritz in Bohemia, the bastard son of a leading Rosicrucian, some time towards the end of the seventeenth century. Nothing was known about him until approximately 1740, when he began to appear in various historical records as a handsome man who seemed to be in his early thirties, moved in fashionable Viennese circles, and was renowned for his unusually sombre clothing, paradoxical fondness for spectacular diamonds, and penchant for telling extraordinary tales about his past life.'
As she read to him in a whisper, Gerry studied her closely, wanting to stroke her cheek, to loosen her long hair and let it fall down sensuously over her shoulders.
'The Saint-Germain of those days,' Ingrid continued solemnly, 'was already

spoken of as an enigmatic and remarkable figure who practised alchemy, was an expert jeweller, was known to speak five languages fluently – and possibly Chinese, Hindu and Persian as well. He had a reputation as a "magical" healer, and was rumoured to be able to turn base metal into gold. He frequently described machines that bore remarkable similarities to locomotives and steam ships – which hadn't been invented at the time – and there were suggestions that he possessed the Alchemist's Stone, had drunk from the Fountain of Eternal Youth, and was approximately four thousand years old.'

'This sounds like bullshit,' Gerry said too loudly. 'He was obviously no more than a confidence trickster.'

At that point, a man at a nearby desk loudly admonished them to be quiet, and Gerry, just about to make an angry retort, caught Ingrid's warning glance, saw her nod towards the exit, realized the complaint was justified, and stood up to leave with her.

Taking one last fond look at the great dome of the library, he also realized that the past five days he had spent here with Ingrid had been, in an odd sense, the most intimate of his life to date, bringing him extremely close to her without actually touching her. He touched her now, placing his hand on her shoulder, then followed her out of the building.

'The Museum Tavern's just across the road,' Ingrid said, 'and it's a very nice pub. We can talk normally there.'

'Okay,' Gerry agreed.

Once inside the pleasantly busy pub, Ingrid leaned towards him, over the table, and said, 'A *lot* of his contemporaries believed that Saint-Germain was a confidence trickster, but an awful lot more took him seriously – not least the governments of the major European countries. According to our notes,' she continued, looking down at the notes she had pieced together from their research, 'the Count, already widely talked about as a remarkable man, also had the reputation of being someone involved rather shadily in politics. On the one hand accused by the French police of being a Prussian spy, he was, on the other, suspected by the Prussians of being a Russian agent. To complicate matters further, in November 1745, in a London obsessed with Jacobite plotters and their French sympathizers, he was arrested by the English authorities, accused of having proStuart letters in his possession, claimed indignantly that the letters had been planted on him, and was

eventually released.'
'Right,' Gerry said. 'And as I recall, your famous Horace Walpole, the 4th Earl of Orford, Suffolk, man of letters, art historian, antiquarian and Whig politician, had something to say about that.'
'Yes. Commenting on the case in a letter to Sir Horace Mann, dated December 9, 1745, Walpole wrote the following odd description: "He – Saint Germain – has been here these two years, and will not tell who he is or whence, but professes that he does not go by his right name.' He then wrote that Saint-Germain, quote, "sings and plays on the violin wonderfully", but added that he was, quote, "mad and not very sensible".'
'An interesting interpretation,' Gerry offered, 'of the Count's refusal to discuss his true past or give his real name.'
'Perhaps,' Ingrid said. 'Anyway, the more bewildering and legendary aspects of the original Comte de SaintGermain began shortly after he had, according to the French Marshal de Belle Isle, cured him of a serious illness and was rewarded by being taken to Paris, where the grateful Marshal set him up with apartments and a laboratory for his alchemical experiments.'
'It was the age of patronage,' Gerry joked. '*I* could do with that right now.'
'That's not important,' Ingrid said, obviously not hearing the joke. '*Here's* what's important… According to Georges Touchard-Lafosse, in his *Chroniques de l'Œil de Bœuf*, shortly after his arrival in Paris, Saint-Germain attended a soirée given by the aged Countess von Georgy, wife of the deceased ambassador to Venice, who remembered meeting, in Venice in the 1670s, someone with the same name as, and similar appearance to, SaintGermain. When the surprisingly youthful Saint-Germain confirmed to the Countess that the man she had met all those years ago had indeed been himself, she could scarcely believe it, since this would have made him nearly a hundred years old. However, Saint-Germain insisted that he was the very same man, that he was in fact *very* old, but then, when the stunned Countess said that he must be, quote "a devil", he trembled violently, told her not to use such names, and fled from the room.'
'He was also described as a charlatan,' Gerry said, 'and that could have been part of his act. Likewise for his claims that he had known the Holy Family intimately, been present at the marriage feast at Cana, been a good friend of Anne, the mother of the Virgin Mary, personally proposed her canonization

at the Council of Nicaea in AD 325, and prophesied that Christ would come to a very bad end.'
'There's no real proof that he ever said those things,' Ingrid corrected him. 'But if he did, there *may* have been something in what he said. However, please don't make me digress. Let's get back to what he claimed to the ageing Countess at her soirée.'
'Okay, Ingrid, continue.'
She smiled at him, then looked down at her notes, pushing her spectacles back up her fine nose with a delicate finger.
'A possible substantiation for Saint-Germain's claim that he was the man known to the much younger Countess von Georgy in the 1670s was recorded by Baron Charles Henry de Gleichen, a Danish diplomat who, in his published memoirs, stated that the composer Philippe Rameau and a relative of the French ambassador to Venice had both assured him that they had known a Monsieur de Saint-Germain in the early 1700s when, according to them, he appeared to be a man of about fifty. Baron Gleichen also confirmed that Saint-Germain had a fondness for unusual diamonds when, in the same memoirs, he wrote: "He showed me some remarkable things – a great number of coloured brilliants and other stones of unusual size and perfection. I thought I was seeing the treasures of the fabled Cave of Jewels…"'
'Which could in fact have been more products of his alchemical experiments,' Gerry suggested.
'That's certainly what was widely believed at the time: that Saint-Germain was an alchemist who could turn base metal into gold, or glass into diamonds, and whose alchemical experiments might also have led to his discovery of the elixir of life. This explained, for many people who remembered him from years previously, why he seemed relatively *ageless*. This latter aspect of his personality was heightened by his claims that he never ate
– and certainly he was never *seen* eating or drinking in public.'
'That could have been a trick as well,' Gerry said. 'He could have been stuffing his guts in private.'
'Yes,' Ingrid said agreeably, 'it could have been a trick, but…'
'But?'
'There's a lot more to come.'
'So sorry,' Gerry said, impersonating an English gentleman. 'Please *do*

continue.'
'In 1758,' she went on, 'while still in Paris, SaintGermain was presented to Louis XV by Marshal de Bell Isle in the salon of Louis' mistress, Madame de Pompadour. He charmed both of them, and two years later, in 1760, was sent by Louis XV to the Hague as his personal representative, to help settle the peace treaty between Prussia and Austria. While in Holland, he fell out with his former friend, Casanova, who then tried to discredit him – and this may have encouraged the enmity of Louis' Foreign Minister, the Duc de Choiseul, who convinced Louis that Saint-Germain had betrayed him and should be thrown in the Bastille. Subsequently, Saint-Germain fled to England.'
'We didn't find any confirmation for that,' Gerry reminded her.
'Yes, we did,' Ingrid responded, pointing down at her neatly written notes. 'A *London Chronicle* article of January 3, 1760, which was mainly concerned with SaintGermain's then widely reported "eternal youth", included the comment: "No one now doubts it, although at first it was thought to be pure fantasy. In fact, everyone believes that, among other things, he knows of a panacea for all diseases and is able to overcome old age.'
As the frightening implications of Ingrid's summary gradually dawned on him, Gerry found himself glancing distractedly around the pleasant English pub – at the workers in their overalls, the gentlemen in pinstripe suits, the secretaries and Yuppies and tourists and casual staff – then started losing himself in the past, in recollections of his Nile cruise; recalling vividly the mysterious man he had encountered on the boat: his silvery hair, unlined skin, ageless face… and mesmeric gaze.
Another Saint-Germain? Someone simply using his name? Or was he truly the embodiment of something so remarkable that it went beyond the bounds of credibility and rendered normal reasoning prostrate?
He shook his head from side to side, hoping to clear it, trying to hold his senses together; but when he looked back at Ingrid and caught her solemn stare, he was forced to accept that her implications could not be avoided.
'You *do* realize what you're implying?'
'Yes,' Ingrid said, 'I do. We now know that he existed and was very old indeed – a skilled musician and composer, an astonishing linguist, an authority on world history, a magician and alchemist who claimed to be 4000 years old – and who, at least according to the historical records, *did* live a remarkably long time.'

She trailed off in a hesitant manner, as if doubting her own words; and as fear crept relentlessly over Gerry, he welled up with concern for her.
‘Okay,’ he said, trying to keep his voice light and act unconcerned, ‘what else do we have there?’
‘From this point on,’ Ingrid responded, staring down at her notes, ‘the recorded facts make his life much more concrete. In 1762 he took part in the deposition of Peter III of Russia and in bringing Catherine the Great to the throne. A year later, he was known to be carrying out further alchemical experiments in his laboratory in the castle of Chambord, which Louis XV had put at his disposal in 1758. The following year he was living in Holland under the name of Count Surmount; there, he established another laboratory in which he made paint and dyes, as well as continuing his alchemical experiments. Disappearing from Holland with about 100,000 gilders, he materialized in Belgium, this time calling himself the Marquis de Monferret, and there, in Tournai, he set up yet another laboratory.’
‘Obviously, he never stopped experimenting.’
‘No,’ Ingrid said. ‘Never.’
‘And so?’
Ingrid sighed. ‘In 1768 he turned up in Russia in the court of Catherine the Great, whom he had previously helped bring to the throne. According to Count Alexei Orlov, then head of the Russian Imperial Forces, he was an invaluable diplomat and palace advisor during the RussianTurkish war of 1768-70. As a reward for his services, he was made a high-ranking officer in the Russian Army – a position he took under the ironic English alias of General Welldone – but instead of reaping the benefits of his prestigious position at the end of the war, he chose to leave Russia and go to Germany where, with his friend and pupil, Prince Charles of Hesse-Cassel, he carried out more alchemical experiments, as well as studying Freemasonry and Rosicrucianism…’
As her voice trailed off again and she restlessly shuffled more papers, Gerry tried to accept what was being implied and understood that if it was true, it was something beyond belief.
It was also something frightening, without precedent, unparalleled, and as he looked at Ingrid’s solemn face, which was filling up with excitement, he felt himself being submerged in a wave of guilt and fear at the thought of what he was leading her into by letting her share this.

‘Now *this* is interesting,’ Ingrid said, definitely sounding excited. ‘On April 15, 1758, Voltaire, in one of his many letters to Frederick the Great, described SaintGermain as, quote, “a man who knows everything and never dies”. He then added, “I think it quite probable that this man will visit you within the next fifty years.”’
‘Christ, yes!’ Gerry burst out. ‘Even Voltaire!’
‘Yes, Gerry. And in 1779, the sister of Frederick the Great, Princess Amalie of Prussia, met Saint-Germain and became interested in him. However, when a letter from Saint-Germain to Frederick, begging for patronage, was ignored – possibly because of Frederick’s embarrassment over widely circulated reports that Saint-Germain had worked for him as a double-agent during his period in the French court – Saint-Germain went that same year to Eckernforde, in Schleswig, Germany, where he lived, and reportedly died, in the castle of Prince Charles of HesseCassel.’
Gerry wanted to reach out and hold her, to protect her with his love, but recalling what had happened when she left his apartment a week ago, recalling, also, the magical events of the Nile cruise, he was forced to accept, with shame and foreboding, that his love for her, as yet unconsummated, would not be enough to protect her if the wheel turned against them.
‘The parish records in the Catholic church of Eckernforde,’ she said, ‘state that Saint-Germain died on February 27, 1784, and was buried locally. If this is true – and assuming that he *was* about fifty years old in 1701 – it makes him, at a time when thirty-five was *old age*, over 130 years old.’
‘Except,’ Gerry said softly, hardly recognizing his own voice, unable to fully accept what he was hearing and almost struck numb by it, ‘he may *not* have died…’
‘Correct,’ Ingrid said, smiling at him. ‘He might still be alive.’

Chapter Seven

Ingrid felt really proud of herself, in command, actually *doing* things. When Gerry nodded and stood up, she gathered her notes together, put them into her briefcase, then also stood up and followed him out of the busy pub, into the sunlit street. When he took hold of her hand and smiled at her, she filled up with warmth at what she felt he had given her – the chance to prove that she existed and had worth, could love and be loved.

‘Come on,’ Gerry said. ‘ Now we have to pay someone a visit. I made an appointment last night.’
‘You *did*?’ she asked, surprised. ‘An appointment with whom?’
‘I’ll tell you in a minute. Let’s finish summing up first. We reached the conclusion that Saint-Germain may *not* have died, that he could be thousands of years old, but remarkably still alive. I want to get all this clear in my mind, so let’s move on from there.’
‘Right,’ she said, opening the notes still in her hand and glancing repeatedly at them as she walked beside him along Great Russell Street, towards Tottenham Court Road. ‘Although Saint-Germain’s death is recorded in the records of the parish church in Eckernforde, a great deal of mystery surrounds his death. For a start, he was reported to have died when his good friend, Prince Charles, the Landgrave of Hesse-Cassel, was absent from home, and with only two nameless women servants in attendance. To deepen the mystery, Prince Charles then burned all of Saint-Germain’s supposedly invaluable papers – in his own words, “lest they be misinterpreted”. Almost immediately, then, the rumours that Saint-Germain was still alive spread like wildfire.’
‘That stuck in my mind,’ Gerry said. ‘The story that he *burned* all of Saint-Germain’s papers. To me, that seems highly unlikely. Especially when you consider that Prince Charles was Saint-Germain’s devoted pupil. I don’t think that anyone who’d worked as long or as intimately with Saint-Germain as Prince Charles did would have been capable of destroying the results of all that labour. It’s also pretty unlikely that Prince Charles would have been absent from the house when Saint-Germain died.’
‘The implication being that Saint-Germain did *not* die at that time, but deliberately disappeared, taking all of his papers with him, and leaving the devoted Prince Charles to cover up his trail.’
‘Yeah,’ Gerry said, ‘that’s right. And as I recall from our notes, there *are* grounds for thinking that the 130-year old Saint-Germain actually managed to grow even older.’
‘You recall correctly,’ Ingrid said, moving closer to him as they entered the busy Underground station. She waited until Gerry had purchased two tickets to Holland Park and they had both descended the lengthy escalator and boarded the train, before continuing: ‘In 1785, an important congress of

Freemasons was held in Paris and attended by Rosicrucians, Kabbalists, Illuminati and members of other secret societies. According to the Masonic archives, the guests included the magician Cagliostro, the philosopher Louis Claude de St Martin, the renowned physician and hypnotist, Franz Anton Mesmer, and… Saint-Germain, who is also on record as having addressed the meeting. Mesmer later stated that it was Saint-Germain who explained the subconscious mind to him, thus paving the way for modern psychology and psychiatry.'

'Well,' Gerry said, 'whether alive or dead, our Count Saint-Germain certainly seems to have influenced a lot of very famous people.'

'Yes – and he continued to do so. It was recorded by the diarist Mademoiselle D'Adhemar that he visited her five times over a period of many years, beginning in 1789, when he also visited Sweden's King Gustavus III to warn him of danger, and ending in 1820, the night before the infamous murder of the Duc de Berri.'

'This is shivery,' Gerry said, grinning at her. 'This is weird. Very *strange*.'

'Strange? It gets stranger. In her diaries, Marie Antoinette expressed her regret that she didn't take note of Saint-Germain's earlier warning about the forthcoming outbreak of the French Revolution. Reportedly, SaintGermain also appeared to Madame du Barry on the scaffold, and to Marie Antoinette in prison, to warn her of the date and time of her execution.

'And it doesn't end there… Twenty-eight years later, in 1821, the famed educationalist, Madame de Genlis, mentioned in her memoirs a conversation that she'd had with Saint-German during the Vienna peace talks; and in the same year, the French ambassador, Count de Chalon, claimed to have spoken to him in St Mark's Square in Venice. By 1842, Saint-Germain's name was being mentioned in connection with Lord Lytton, whom he was said to have helped develop supernatural powers; in 1867 a meeting of the Grand Lodge of Freemasons in Milan, Italy, was attended by Saint-Germain; and in 1896, when, according to the evidence, Saint-Germain would have been approximately 245 years old, the famed theosophist, Annie Bresant, wrote that she had recently met him.'

As the train pulled into Holland Park station, Gerry, clearly intrigued and with his brain working overtime, gazed out the window, then stood up and exclaimed, 'I can't believe it! 245 years old so far! Come on, Ingrid, this is our stop.'

She followed him out of the carriage, then up the escalator and out into another noisy main road.
‘So who are we going to see?’ she asked him. ‘You still haven’t told me.’
Slipping in beside her, linking his arm with hers and leading her along the busy road, he said, ‘One of the most recent books I looked at in the British Library had a brief paragraph on a woman called Helena Barbanell, stating that she had been a leading member of the Theosophical Society, but had, a few years back, been expelled from the organization because of her public declaration that she was the *chela*, or disciple, of the legendary Comte de SaintGermain, and that her renowned mediumistic powers were channelled through her from him. Apparently Miss Barbanell, now an old lady, is convinced that SaintGermain still exists and operates through her. So, I just looked her up in the phone book, called her, told her I was doing research for a book on Saint-Germain, and made an appointment to see her – and that’s where we’re going.’
‘My,’ Ingrid said, smiling at him, ‘you’re so efficient. I let that one slip past me.’
‘No one’s perfect,’ he joked.
After glancing up to check the nameplate above the pavement, he led her along a broad, tree-lined street of elegant early-nineteenth-century houses, eventually stopping at one a short distance along. Like many of the houses in the area, this former family home had been converted into apartments. Gerry took the steps to the front door and pressed the bell belonging to Helena Barbanell. An electronically distorted female voice came out of the speaker above the bells, asking who was calling, and when Gerry had given both their names, a buzzing sound indicated that the door could be opened. Gerry opened the door, let Ingrid step in ahead of him, closed the door and led her across the old-fashioned hallway to the groundfloor apartment of Helena Barbanell.
The woman who greeted them was old, grey-haired, heavily built, and supporting her arthritic limbs on a walking stick. However, Ingrid noted that her eyes shone with a deceptively youthful brilliance, and her smile, as she ushered them into the apartment, was welcoming and almost girlish.
Awkwardly seating herself and leaning her walking stick against a table, Ms Barbanell apologized for the state of the untidy room, blamed it on her arthritis, added that this was why she could not even offer them tea, and

asked if they would like a sherry instead. When Ingrid nodded assent, Ms Barbanell indicated the bottle resting on the table, surrounded by antique glasses.
‘I have a visiting home help for my three meals a day,’ she said. ‘Otherwise, I’m becoming increasingly useless – so please help yourselves.’
‘Would you like one as well?’ Gerry asked her.
‘Yes,’ she replied. ‘Why not? I’ll be in my grave soon enough, so a sherry won’t harm me.’
While Gerry poured the drinks, Ingrid glanced around the apartment and was saddened by the state and smell of it. The home help had not cleaned it well and the air had a musky aroma. The furniture was Victorian, darkly varnished and covered in dust. On the walls were photographs turning brown with age. The tables and chairs were littered with old newspapers, magazines and books. It was like a museum.
Helena Barbanell also looked Victorian and was dressed accordingly.
‘You said on the telephone that you were working on a book about the Comte de Saint-Germain,’ she said to Gerry when he had passed her a glass of sherry.
‘Yes,’ Gerry lied, ‘that’s correct.’
‘Have you found out much about him?’
‘Quite a lot, but still not enough for my planned book.’
Ms Barbanell smiled at him. ‘Yes, I can understand that. The records on Saint-Germain are rather scanty – and I doubt that I can add much to them.’
‘Well,’ Gerry said, ‘we’ve read about your expulsion from the Theosophical Society because of your publicly stated belief in the existence of Saint-Germain. We also know that you believe him to be one of the immortals, and that in the course of history he’s reappeared frequently, under various aliases, to interfere in the affairs of mankind.’
‘That is correct, my dear. I am merely one of his many disciples, and my mediumistic powers come from him. It is the belief of that Theosophical Society that all mediumistic powers come from secret Mahatmas in a hidden colony in Tibet – the magical adepts who will one day regenerate the corrupt world – but they do not believe, as I do, that the Comte de Saint-Germain is such. Sadly, they believe him to be one of history’s great imposters.’
‘That’s just what I was going to ask you about,’ Ingrid said. ‘There *is* a large body of opinion which says that the supposed appearances of Saint-Germain

throughout the centuries is some kind of elaborate hoax. What makes you so convinced that he really exists?'
'Because he has appeared to me, spoken to me, and acts as my teacher. I am his *chula*, his disciple, and hope to join him when death finally claims me.'
The bright eyes of the old woman were staring clearly and steadily at her, and Ingrid had to admire her calm conviction, whether or not rooted in fact.
'I find that hard to believe, Miss Barbanell,' she said, feeling the blush on her cheeks.
'Naturally,' Ms Barbanell replied pleasantly, obviously not offended. 'Since you have not had such an experience yourself, mine must be hard to accept.'
'Is there any way you can convince us?' Gerry said, 'that the known history of Saint-Germain *isn't* some kind of elaborate hoax?'
Ms Barbanell smiled again, shrugged, and shook her head from side to side in denial. 'Surely it would be impossible for any individual, or organization for that matter, to extend such a hoax over such a long period of time, as well as keeping it alive in so many different countries and cultures. Besides, the historical records clearly reveal that most of the stories about Saint-Germain that gave rise to charges of charlatanism did not in fact originate with Saint-Germain himself, but indirectly from his arch-enemy, the Duc de Choiseul, who, in his hatred or jealousy of the Count, hired a look-alike named Gauve to mingle in society and exaggerate the Count's well-known claims as a means of discrediting him. This came to light through the extensive researches of Gustav Berthold Volz in the 1920s.'
'Given that Saint-Germain was supposed to have led such an extraordinary and active life, why are the historical records on him so thin?'
'The records *are* scanty,' Ms Barbanell agreed, 'but this was undoubtedly deliberate on Saint-Germain's part. For instance, Napoleon III was so intrigued by the stories about Saint-Germain that he set up a special commission to investigate him. However, the commission's findings were destroyed in a fire that consumed the Hotel de Ville in Paris in 1871 – and few were willing to ascribe that disaster to coincidence. Similar obstructions to the sources of information, and the mysterious destruction of discovered rare material evidence, have occurred throughout the years since Saint-Germain's final recorded materialization in 1820, when he last visited Mademoiselle d'Adhemar.'
'Such as the supposed burning of his papers, after his presumed death, by his

devoted pupil, Prince Charles of Hesse-Cassel.'
'Precisely,' Ms Barbanell responded. 'The story that he died in Eckernforde in 1784 is nonsense. Saint-Germain evolved long ago from the physical plane onto the nonphysical plane of the magical adept, but he can take on physical form at will. He did *not* die in 1784, but simply moved on – either in the flesh or in the spirit – and doubtless commanded Prince Charles, his disciple, to fake his death, as it had been faked many times before.'
'*Before*?' Ingrid asked, surprised at her own lack of shyness.
'Of course,' Ms Barbanell said, after having another sip of sherry and pursing her lips. 'Saint-Germain knows the Hermetic secret which gives one immortality, and has thus reappeared many times throughout history, under various aliases.'
'You really think that's possible?'
'It's possible for Saint-Germain, my dear. Through alchemy he discovered the elixir of life, and thus became an immortal, a spiritual adept, impervious to time and space.'
'I thought alchemy was a way of turning metal into gold,' Gerry said sceptically.
'That's a commonplace misconception,' Ms Barbanell said, her gaze calm and direct. 'Alchemy is, in fact, a means of purifying humanity, as well as nature, and it can therefore be applied to material objects, the cosmos, or man. The changing of metal into gold is only a small part of alchemy – a very unimportant part. The major purpose of the science is to find the ultimate purification – the panacea, the cure for all ailments, the elixir of life. It's no accident, my dear, that most of the great alchemists of history lived much longer than their fellow men of the time.'
'The Hermetic secret, then, is to be found in alchemy?'
'Yes, young man, it is.'
Ingrid caught Gerry's glance, took note of his raised right eyebrow, returned her gaze to the oddly youthful face of the arthritic old woman and didn't know what to think. She felt excited, yes, but she also felt growing fear and yearned to be held in Gerry's arms and lose herself in his warmth. But she finished her sherry, placed the glass back on the table, then spoke again to the aristocratic old lady.
'Are you often in contact with Saint-Germain?'
'No,' Ms Barbanell said without hesitation. '*I* am not in contact with *him*. *He*

contacts me when it suits him, which is how it must be. For now, I am merely his disciple, his *chela,* but hopefully, when death comes, I will ascend to become one of his adepts.'
'Like Saint-Germain himself?'
'Not *quite* like Saint-Germain, but a spiritual adept on his plane. Saint-Germain is one of our hidden masters – one of the immortals whose vast, secret knowledge is available to adepts for the gradual enrichment of the world – along with such figures as Jesus Christ, Buddha, Merlin, Apollonius of Tyana and Roger Bacon.'
'And Christian Rosenkreuz?' Gerry asked out of the blue.
Ms Barbanell reacted as if slapped in the face. Visibly flushing, she stared at Gerry with her lined eyes glittering intensely, glanced at Ingrid as if betrayed, then blinked in agitation, had another sip of sherry, and unsteadily placed her glass back on the table.
'Christian Rosenkreuz?' she repeated, as if confused.
'Yes,' Gerry said, pressing his advantage. 'It's been suggested more than once that Saint-Germain was a member of the historically obscure Rosicrucian Society – and might even have been the original *founder* of the fraternity – or the son of the founder.'
Ms Barbanell appeared to tremble slightly, then regained control of herself. 'I *have* heard that theory,' she said, 'but can neither confirm nor deny it. I only know that there is very little connection between the modern Rosicrucian believers and what you have rightly described as the historically obscure Rosicrucian Society – and that just as the origins of that society are obscured by history, so too is the identity of its founder. Whether or not Christian Rosenkreuz and Saint-Germain are one and the same – or even related – is something I can't say with certainty.'
'Can anyone?'
Ms Barbanell finished her sherry, set the glass back on the table, played nervously with it, then sighed and looked steadily at Gerry.
'I doubt that *anyone* can confirm it with certainty,' she said. 'However, there *is* someone who might be able to shed more light on the matter. A rather disgusting German sodomite and practising occultist who, before his descent into the quagmire of black magic, was a member of the reportedly still existing *original* Rosicrucian Society – the one whose origins are obscured in the mists of history. His name is Klaus Schiller.'

‘And where might we find Mr Schiller?’ Gerry asked.
‘In Eckernford, West Germany,’ Ms Barbanell replied, suddenly looking disconsolate, shivering as if with shock, then taking a deep breath and letting it out before looking up again. ‘Klaus Schiller,’ she continued in a less confident, trembling tone of voice, ‘is a degenerate descendant of Prince Charles of Hesse-Cassel, and lives alone near the church in whose graveyard Saint-Germain was reportedly buried. I suggest you pay him a visit.’
Ingrid was just about to ask some questions of her own when she saw the tears brimming in the old lady’s eyes, then felt a hand on her shoulder. Twitching automatically, she glanced up at Gerry and saw him shaking his head in a negative gesture, warning her not to speak.
‘Let’s go,’ he said softly.

When they left Helena Barbanell’s apartment, heard her front door close quietly but firmly behind them, and stepped into the gloom of the hallway, Ingrid felt an even deeper gloom descending upon her, bringing fear and confusion. Recalling the shock on Ms Barbanell’s face when Gerry had mentioned Christian Rosenkreuz – as well as the old lady’s sudden collapse into emotional desolation after confessing that the descendent of Saint-Germain’s pupil, Prince Charles of Hesse-Cassel, was in her view a degenerate – she felt a touch of that desolation in herself.

Outside, the sun was still shining, but edging towards an early-evening greyness, as she walked beside Gerry down the steps of the building, unable to resist leaning against him, in need of his presence. She felt haunted by Saint-Germain, by his impossible history, and wondered if she was living a dream, or perhaps going mad.

Then she looked across the broad, handsome road and saw the men staring at her.
There were two of them, wearing matching gaberdines, both on the opposite pavement, staring at her from behind a white Audi 100 car.
Seeing them, she stopped walking, briefly frozen with fear, convinced that the men were watching her, but not sure why she thought that. Then she focused on the white Audi 100 and instantly understood the cause of her fear, believing that the two men worked for her father and had come here to abduct

her and take her back to him.
Now even more fearful, she reached out for Gerry's hand and felt his fingers curling around her own, returning her to her senses and giving her comfort and courage. Putting her fears down to imagination, she tried not to look back, but eventually, just before turning into the main road, had to glance over her shoulder, fully expecting to see the two men following her.
They were not doing so. They weren't even looking at her. Instead, they were strolling casually across the road, heading in the general direction of the building that she and Gerry had just left.
Wondering what was happening to her, she smiled up at Gerry, pressed herself tighter to him, and let him lead her away.
'Another shivery experience,' he said to her. 'So let's go to Germany.'

Chapter Eight

Leaning heavily on her walking stick, Ms Barbanell looked down through her window as the young woman and her American boyfriend left the building and walked off along the pavement in the dimming afternoon light. The girl had been very sweet, but too strait-laced for her own good, while her young man, the American, had seemed bright but oddly innocent for his years, a naif, one of life's eternal optimists, a modern-day holy fool.

She watched them walk off, hand in hand, obviously in love, then sighed and turned away from the window to return to her chair.

They'll be back, she thought. In a day or two, a week or two. They had the look of two people obsessed… and their obsession was Saint-Germain.

Awkwardly, painfully, she hobbled back to her chair, put the walking stick aside, then poured herself a more generous sherry. Sipping at it, appreciating its anaesthetizing qualities, she thought of the young American, her holy fool, and wondered if he'd been chosen. Perhaps, perhaps not. He had the boldness of innocence, the courage of the naive; she had sensed that he was as pure as the driven snow, at least deep down inside himself, where it mattered the most.

If he knew what she was thinking about him, he would certainly laugh at her, since clearly he did not know himself and thought of himself as a morally flawed, worldly man. Yet she sensed that he was not a worldly man, but a man of the spirit, his soul still undefiled.

She had another sip of sherry, trying to soothe her sense of shame. Her own wavering faith had surfaced when she had told them of Klaus Schiller; and the young Englishspeaking German lady and her American boyfriend had obviously noticed her confusion at the very mention of Christian Rosenkreuz. They had witnessed the fissure in her faith and would surely return…

Sighing, she tried to forget the arthritic pains in her bones, could not stop herself from yearning for release from the body's betrayals, and then thought with a mixture of reverence and helpless suspicion about her venerable Master, Saint-Germain.

Most of her life, since adolescence, she had been visited by him, had observed his human form in its ectoplasmic radiance, had listened to his words and obeyed them, wanting only to follow in his footsteps and ascend to the summits. She had thought of him as the very essence of goodness, the embodiment of love, the supreme deity under God, but as old age and the body's failings attacked her, she had suffered the first flickerings of doubt about his nature and motives. Too often, in recent years, his loving, seductive eyes had momentarily displayed an icy coldness or steely, barely suppressed, inexplicable rage. She had thought of him as strong, as aglow with inner peace and joy, but too often recently she had sensed despair and grief at his core.

Saint-Germain, her Master and hope, had more sides than a prism.
And what about Klaus Schiller? Why did *he* haunt her so? It was because he was the last of a long and noble line
– the descendent of the blessed Prince Charles of HesseCassel – and she couldn't understand how Saint-Germain, or the Order, could let that line degenerate so dramatically, and, even worse, let a corrupted former disciple remain so close to the hallowed ground from which the two adepts had ascended.

When she thought of Klaus Schiller, she thought of doubt – her own doubt and growing confusion. The young American and his girlfriend had sensed it and would surely return.

She was thinking thus when someone knocked on the door of the apartment. Convinced that it was the young lady and her American boyfriend returning already, she sighed, stood up heavily and made her way on the walking stick to the door, only managing to pull it open with some difficulty.

Two strange men, both wearing gaberdines, were standing in the hallway, smiling at her in a manner that instantly made her turn cold with fear.

'Hi,' the smaller one said, his grin broadening maliciously. 'We're plainclothes policemen. We picked the lock on the main door downstairs and let ourselves in. We want to ask you a few questions about those people who just paid you a visit. May we come in?'

'Policemen?' Ms Barbanell asked rhetorically. '*You're* not policemen! Just who on earth – ?'

The big man stepped forward, kicked her walking stick aside, and pushed her back into the room even as she was falling. She hit the floor on her back, was shocked by the pain, heard her own cry as if from far away as the two men entered the apartment and slammed the door shut behind them.

'Put this bitch in that chair there!'

The voice was calm and unfeeling, filling her with dread, and as she tried to sit up, choking back the bile of terror, one of them grabbed her by the hair and dragged her in agony across the floor. Her heart raced dangerously. She gasped, choked, wept helplessly, heard her own groaning, then felt herself being picked up and planted roughly down on the chair. When her face was slapped, she opened watery eyes to see the man staring down at her.

The bigger man, not smiling, which made him less frightening than the smaller, grinning man, held her walking stick up in front of him, then expertly broke it over his raised knee and threw the two pieces on the floor.

'This time it's just the walking stick,' he said with a guttural accent. 'The next time, if you don't answer our questions, it'll be your old woman's spine. Now stop snivelling and listen.'

She listened and answered automatically, stunned by pain, hearing her own voice repeating what she had said to the American and his young girlfriend, understanding that her tormentors would pursue them and most likely harm them.

‘You spoke to the American pig and his girlfriend?’
‘Yes.’
‘About what?’
‘Nothing. Just – ’
She didn’t know what they were doing. She only understood the pain. It shot up from her tortured fingers to her shoulders and made her shudder convulsively.
‘Did they ask about the Lodestone?’
‘Pardon?’
‘Don’t be boring. A masquerade of innocence won’t help you – it will just make me hurt you more. Try this for size.’
Her normal world was blotted out. The pain became her sole reality. Dissolving into the pain, she suddenly sensed that death was advancing upon her, bringing darkness and terror.
‘They *didn’t* ask about the Lodestone? The Tuaoi Stone?’
‘No! I swear, *no*!’
‘Then why did they come to see you, darling? And what’s a fingernail worth these days?’
The worst torturer was herself. Her own screaming drove her crazy. The pain had the bite of a reality she had not known before. Her shivering lips drank her own tears.
‘Come on, grandma, give us more. We’re both hungry for gossip. What did they want to know, what did they learn, and where are they going? Why the tears? Am I *hurting* you?’
One of the men kept slapping her face. The other repeatedly stepped on her toes. When not doing this, they did things so obscene, so humiliating and agonizing, that she couldn’t rise above the convulsions of her afflicted flesh, the pain’s awesome dominion.
‘Come on, darling, let’s not be so coy. Let’s have some frankness. Is this nipple for sampling?’
They asked her what her visitors had wanted and what she had told them. It was a nightmare of terror, of pain expertly applied, and when she lied to them, or withheld information, they sensed it and applied some fresh torture until she gave in and told all.
‘They’re going to Eckernforde in West Germany,’ were the penultimate words she uttered. ‘They’re going to visit Klaus Schiller. Oh, please, don’t!

Not again…’
‘Anything else?’
‘No! Nothing! I swear it! Oh, please, not again…’
The chair was kicked from beneath her and she fell to the floor, was dragged by the hair from the lounge and into the bathroom.
She understood, then, that she was going to die, definitely, irrevocably, and as the taps were turned on, as the bath filled with water, as they made jokes and chuckled and occasionally kicked her broken body, she travelled down through herself, to where the pain could not reach her, and took courage from the image of her Master, the revered Saint-Germain.
He materialized before her, a radiant presence in the darkness, watching calmly as they lowered her into the bath and held her under the water. She knew she was being murdered and that soon she would be dead, but she also knew, when she saw Saint-Germain, that death would not have dominion.
In those few seconds before oblivion, with her chest about to burst, her faith, which had been wavering, was made whole by his light, and she felt her spirit rising out of doubt to remove her from terror.
‘They will kill you,’ Saint-Germain said, ‘but they cannot finally harm you. What they do is done from ignorance, but their ignorance is a blessing; they are merely putting an end to your suffering and setting you free. Observe the light. Become part of it.’
Her chest and heart burst. She exploded into the light. Dying, she was resurrected on the instant, leaving life to the living. There was pain and then the radiance of immortality where the mountain peaks sheltered her.
‘The fat cow’s dead,’ one of the men said. ‘Let’s get the hell out of here.’
Saint-Germain smiled in welcome.

Chapter Nine

Hans was not feeling too good when he entered the Eforie Nord thermal centre. In fact, he was exhausted, having just driven nearly 200 kilometres from Bucharest to Constanta, Romania’s second largest and most ancient city, then south along the road between the sandy Black Sea shore and the freshwater lakes, not stopping until he reached Eforie Nord, close to Lake Techirghiol, famed for its health-giving sapropel mud.

What greeted him when he opened the door and tentatively entered the steaming mud-room was the sight of the gross Wilhelm Zweig, naked but for a pair of tight briefs, over which his bloated belly flopped in an ugly manner where he sat on the edge of a large, circular steel bath filled with warm sapropel mud, his feet in the bath, while two severe-faced, white-overalled Ukrainian nurses spread the mud over his hairy legs and thighs.

'Ah,' Zweig said, staring directly at him, 'you got here at last.'
Having flown all the way from Bucharest to London and back again while Zweig rested in this luxurious treatment centre, Hans did not take too kindly to the implied rebuke. However, he was frightened of Zweig, more so today than usual, and merely offered what he thought resembled a placating smile.
'Yes, sir,' he said.
'Did you stop off at the hotel in Bucharest on your way here?'
'Yes, I did.'
'And everything was fine there?'
'Yes. No problems.'
'Elena was still there?'
'Yes, naturally,' Hans said, too frightened to tell Zweig that his beloved Elena, bored as usual, had made him join her on an early morning tour of the discos, cafés and brasseries of the city, and had then dragged him into her bed for some athletic sex.
He still could scarcely believe it.
Not a virgin, but with little time for romance, Hans had often secretly lusted after Elena, at once repelled and aroused by her sly teasing and sluttish behaviour. Yet he had never condemned her too much, thinking himself no better than she was, knowing too well how easy it was to give in, to surrender your will, to the stronger will of another, as undoubtedly both of them had done with Zweig. So in one sense he had sympathized with her predicament – she had once been a professional whore and now was solely Zweig's kept woman, a virtual prisoner – and Hans, who felt increasingly that he also was a prisoner, had always felt that he and Elena had much in common, shared the same dirty cell.
So he had been drawn to her, lusting for her in secret, and when she had seduced him in that hotel in Bucharest, he hadn't put up much resistance.
He could still see her body, stark naked, voluptuous, could almost feel her

limbs wrapped around him, drawing him in. The recollection was vivid, arousing him on the instant, but also resurrecting the fear that had been dogging him since leaving the hotel.
He was terrified of being found out, of Zweig seeing it in his face, but even more terrified that Elena would inadvertently tell Zweig about it. Yes, having had her that morning, having sampled her artful ways, Hans had to have her again (more so since she had told him that she also wanted him) but his lust could not dim his dread of what would happen should Zweig find out about them.
Zweig would certainly kill him.
Aware of this, he wanted to flee from the room, but forced himself to behave as if nothing had happened.
'Ah, God,' Zweig complained as one of the women started rubbing the mud in between his fat thighs. 'These rheumatic pains of mine. I've tried everything else, but only this works. You should try it yourself, Hans.'
'I don't have rheumatic pains,' Hans said, as usual embarrassed and appalled by the sight of his naked boss and trying hard not to look at him.
'That doesn't matter, Hans. This treatment could make you feel good anyway. And you should think of the future, after all. You won't stay young forever.'
'No, I suppose not.'
'So what have you got to report? Did you bring back my daughter?'
'No, sir. We found her, but didn't bring her back – for what I feel are good reasons.'
'I can think of no good reason for not doing what you were told. I told you to terminate that American and bring back my daughter. I will accept no excuses.'
When Zweig stared at him with those gelid, inhuman eyes, Hans automatically removed his handkerchief from his pocket, wiped sweat from his forehead, and recalled with depressing clarity his childhood in Bremen, his hateful foster parents, all the times they had whipped him and locked him in a closet, caught him masturbating and whipped him again while threatening hell's fires. His childhood had been a nightmare, his adolescence worse; and then, as if being mocked further by God, he had taken up employment with Zweig, not knowing what he was like, and had found out too late that he was working for a criminal and bully – possibly even a

madman.
At first he had been excited by it, enraptured by the power it gave him, in thrall to the glamour of travelling the world to help coordinate the various offices and warehouses of Zweig's mighty empire, with its communications network of computers, telex and fax machines, satellite links, and numerous spies and informers in highly sensitive government, military and police institutions. But gradually, when it dawned on him just who he was working for, when he realized that his master was possibly a psychopath who was engaged in illicit activities on an international scale, he developed the desperate urge to escape, but just couldn't do it. He had learned of Zweig's tempers, of his homicidal tendencies, and understood that he would not be allowed to leave, now that he knew so much.
This is why he was still working for Zweig, no matter how much he loathed him: he was too frightened to leave without permission, too terrified of what might happen to him should he even mention the subject. He was imprisoned by fear.
'I believe my reasons were sound,' he said, carefully avoiding Zweig's gaze. 'Please let me explain.'
'So explain,' Zweig responded, and then, when one of the women whispered something to him, he swung his legs out of the bath and stood upright, looking even more awful, to let the woman smear the mud over his body.
'We were right about the advertisement placed in the *Guardian* newspaper,' Hans said. 'It *had* been placed by the American and *did* bring Ingrid to him. Some men from our London office followed her to the American's apartment in Notting Hill Gate, London – '
'I know all this already,' Zweig interjected impatiently. 'We received the report in Bucharest. When one of our men tried to abduct the bitch, an unnatural light beamed out of a nearby alley and someone emerged from it, grabbed hold of our man, and somehow made him go into a fit and die. When the driver of our vehicle dragged the dead body into the Audi, he discovered that it had been slightly scorched all over by an unknown heat source.'
'Yes,' Hans said, blushing because he had forgotten that report, 'but a heat source similar to the one that charred the bushes in the Herastrau Park in Bucharest after *you* had your very odd encounter with a stranger.'
'Judging by your description,' Zweig said, 'it was the same man *you* saw in the King's Chamber of the Great Pyramid, when you were with Ingrid and

the American.'
'Yes,' Hans agreed, recalling that terrifying experience, yet still finding it difficult to accept that it had actually happened, since it didn't seem possible. Indeed, repelled though he was by his own duties in Zweig's worldwide network of materialistic, high-tech organizations, he still preferred them, or at least their reality, to the magical world he now seemed to be grappling with. Saint-Germain and the Tuaoi Stone were mysteries he could well do without.
'So?' Zweig said, now covered from neck to toe in the sapropel mud and looking like a gigantic chocolate bar. 'What has all this to do with the American and my bitch of a daughter?'
'Two days ago,' Hans explained, 'in a second attempt to capture Ingrid, I personally arranged for two of our best men to sit on her tail and attempt to grab her at the first available opportunity. Since our men also bugged both their rooms, there was little difficulty in learning about their movements. Ingrid had spent most of the previous five days with the American in the British Library Reading Room, and most evenings, after they had left the Reading Room, they had a meal together, then the American invariably walked Ingrid back to her hotel in Tavistock Square, not far from the museum.'
'So why didn't you abduct her from there?' Zweig asked, spreading his arms as requested by one of the nurses, to enable her to press more mud up under his armpits.
'Don't move,' the woman said softly in imperfect English. 'You must remain very still until the mud hardens.'
'*Sehr gut*,' Zweig said.
'We didn't try grabbing Ingrid in her hotel,' Hans said, grimly amused by the sight of Zweig standing between the two women, covered from neck to toe in hardening mud, 'because of the risk attached – I had thought it best to try to snatch her off the pavement – but also because their numerous visits to the British Library Reading Room had convinced me that they were involved in some kind of research, and I was interested in finding out what it was.'
'Good thinking,' Zweig said, flicking his eyes in Hans' direction, but not daring to move even his head.
'Then,' Hans continued, wishing the mud would constrict so tightly around Zweig that it would eventually crush the life out of him, 'when on the fifth day, the American and Ingrid did *not* go for a meal or return to her hotel, but

instead left the Reading Room early and headed off in another direction, our men followed them. When they entered the apartment of one Helena Barbanell, in Holland Park, one of the men called me.'
'And you ordered the extermination of the American louse, yes?'
'I was going to,' Hans replied, feeling shockingly tired, but still intrigued by the sight of Zweig standing with his arms outspread, as rigid as a rock, encased from head to toe in the *café-au-lait*-coloured sapropel mud.
'However, reasoning that the visit of Ingrid and the American to Miss Barbanell and the five days in the British Library Reading Room were connected, I thought it best to let them go again and, instead, told our men to have words with Miss Barbanell and find out just what was going on.'
'Yes?' Zweig queried impatiently.
'Well, after a lengthy interrogation of the lady – '
'Under torture, I trust!'
'Of course.'
'She came out with the truth.'
'I believe so,' Hans said, feeling sick to think of what had probably ensued in that poor woman's apartment and deeply regretting his own part in it. 'Under interrogation,' he continued despairingly, 'the lady, Helena Barbanell – who had once been a leading theosophist but was thrown out of the society for publicly proclaiming her belief that Saint-Germain was her spiritual Master – confessed that Ingrid and the American had asked her about SaintGermain in general, and wanted to know, in particular, if she could prove the reality of his existence.'
'And this woman actually believed that Saint-Germain was her spiritual Master?'
'Yes, Herr Zweig. She claimed that he visited her now and then, usually materializing out of an unnatural light – the same kind of light that I saw in the King's Chamber of the Great Pyramid of Giza, and which was witnessed, also, by the driver of the car when our man was killed trying to abduct Ingrid in Notting Hill Gate.'
Zweig was clearly growing excited by what he was hearing. His eyes darted left and right, obviously trying to catch the eyes of the women standing on either side of him, then he dropped his gaze as low as he could without moving his head, in an attempt to see if the sapropel mud had hardened.
'Take it off!' he snapped. '*Take the mud off!*'

‘But it’s too early, Herr Zweig,’ one of the women protested. ‘You will not receive the full benefits of the treatment if you – ’
‘Damn you, *take the mud off!*’
Both of the women reacted as if they had been slapped, one of them turning bright red, the other white, then one of them recovered and, using a small hammer and chisel, began chipping the hardened mud off Zweig’s body.
‘So, Hans, continue. Miss Barbanell!’
Distracted by the sight of the agitated woman first breaking and then peeling off the sapropel mud – like someone removing the chocolate coating from a giant Easter egg – Hans was jolted back to reality by the harsh imperative in Zweig’s voice, and said, ‘Yes, of course, Herr Zweig!’ With a rapidly drying throat he continued: ‘So… Ingrid and the American wanted positive proof of the physical existence of Saint-Germain and were given, as a possible source of further information, the name of one Klaus Schiller, an excommunicated German Rosicrucian presently residing in Eckernforde, West Germany, where Saint-Germain was reported to have died and been buried, before defying logic by reappearing many times in later years.’
‘This is the same Saint-Germain so renowned in the eighteenth century?’
‘Yes, Herr Zweig.’
‘And he has reappeared frequently since?’
‘Reportedly, Herr Zweig.’
‘And according to the Barbanell woman, he appeared to her in an unearthly light?’
‘So she seemed to believe, Herr Zweig.’
‘*Seemed* to believe?’
‘Yes, Herr Zweig. She’s dead. Our men killed her.’
‘Good. *Very* good!’
The shell of mud was now being chipped off Zweig at a fairly fast rate, and for the moment he looked every odd indeed – a kind of jigsaw man, with large, irregular patches of mottled white skin showing between equally irregular patches of mud. His flabby breasts with their hairy nipples were free, as were his waving arms.
‘So!’ he exclaimed excitedly. ‘What you witnessed in the King’s Chamber of the Great Pyramid was not an illusion. And nor was what I witnessed in the Herastrau Park. The legendary Saint-Germain actually exists, in one way or another, and is aware that we’re trying to track him down.’

‘Yes. Just as Ingrid and the American are also trying to track him down. Which is why I didn’t bring Ingrid back with me.’
Zweig’s arms and upper body were now free of mud, and while one of the women wiped his bare skin with a hot cloth, the other went down on her knees to chip the rest of the mud off his tree-trunk legs. He glanced down at her, clearly distracted, as if momentarily thinking of something more pleasurable, but then, perhaps regaining his senses, looked up again.
‘Of course,’ he said, ‘Ingrid and the American have gone to Eckernforde in Germany… and our men are following them.’
‘Yes, Herr Zweig,’ Hans said, noticing, when the hardened mud fell off Zweig’s loins, that beneath his trunks he had a slight erection. ‘I’ve instructed them to follow Ingrid and the American, but not to go near them – at least not until they’ve led us to Klaus Schiller. I’ve told them to have a talk with Herr Schiller once Ingrid and the American have done so. Then, as in the case of Miss Barbanell, we will silence Schiller.’
‘Excellent,’ Zweig said.
The woman who had been kneeling in front of him finally removed the last of the mud and stood up, while the second woman, having wiped down his top half, now knelt on the floor to do likewise to his lower half. Zweig still had a slight erection beneath the briefs, but the woman blandly ignored it.
‘So,’ Zweig summarized as the woman wiped him clean, ‘the American is clearly in pursuit of Saint-Germain, no doubt in order to find the Lodestone. My first suspicions about him were therefore correct. He was on that Nile cruise in order to learn the location of the stone – and then he saw Saint-Germain, as you did.’
‘Yes, Herr Zweig.’
‘Yes, *indeed*, Hans. And now we must ensure that the American does *not* get killed – at least not until he’s done our work for us and led us to Saint-Germain, and, through him, to the Lodestone.’
Zweig glanced down at the top of the head of the woman kneeling at his feet, which she had just finished wiping clean. He spread the fingers of his right hand and was just about to lay them lightly on the woman’s head, when, perhaps realizing what he was contemplating, he changed his mind, took a deep breath, and reluctantly watched her standing upright again.
Naked except for his briefs, he smiled at both women.
‘Thank you,’ he said. ‘I’m sorry to have rushed you. Unfortunately, I have to

rush you again and beg you to leave. Come back later to clean up this mess. *Multumesc*. *La revedere*.'
'*Cu placere*,' the women replied in unison, then curtsied and left, clearly relieved to get away.
Zweig waited until they had closed the door behind them, smiled at Hans with a rare display of warmth, then glanced down at his pitiful erection and went to the window, waving his hand to indicate that Hans should join there. Hans wiped sweat from his forehead with a handkerchief, then went to the window and stood beside Zweig.
The Black Sea was stretched out before them, dark beneath a sullen sky, the heavy clouds casting their shadows on the water's bleak surface.
'You have done well,' Zweig said.
'Thank you, Herr Zweig,' Hans responded, feeling even more nervous at the unexpected, uncommon praise. 'I'm pleased I took the correct course of action.'
'You did,' Zweig said, glancing sideways at him. 'And to take the correct course of action is important at all times.'
Not knowing what to say to that, Hans merely returned his gaze to the Black Sea and yearned for his freedom.
'Those women were most attractive,' Zweig said. 'Did you not think so, Hans?'
'Yes, Herr Zweig. I agree they were most attractive.'
Zweig sighed, almost as if disappointed. 'You know,' he said in a distant, rather melancholy manner, 'there was a time when I could not have controlled myself with such women, particularly under such… *intimate* circumstances. However, now, in such circumstances, I find myself thinking, not really of the women, but of the days of the Third Reich, those final, tragic, yet somehow glorious days, and of the fine young Wolfcubs who stood beside me when courage and loyalty were most needed.'
As if unaware of what he was doing, and still gazing in a melancholy manner at the gloomily shadowed Black Sea, Zweig reached out and placed a hand on Hans' shoulder, then squeezed it affectionately.
Shocked by this intimacy, actually filling up with revulsion, and growing ever more fearful in the presence of his master, Hans just stood there, staring at the mistshrouded Black Sea while Zweig droned on, as if talking to himself, his voice histrionically emotional, each word heavy with meaning.

‘Yes,’ he said, ‘they were glorious days indeed – and now, in recalling them, I am filled with pride and love. And instead of lusting for common, peasant women, I find myself thinking of my Nazi comrades and Wolfcubs, those golden young gods of war, and yearning for the purity of their blood and the steel of their spirit. We fought and frolicked together, exercised and bathed together, ate and drank together, and shared the knowledge of what was most important in life, which was, of course… *duty*.’

He turned to face Hans, now holding him by *both* shoulders, exhaled foul breath and offered a smile that chilled Hans to the bone. Hans wanted to run away, to hide his shame or be sick, but he did not, *could* not move a muscle or speak one word of protest.

‘*Duty*!’ Zweig repeated. ‘The one word that gives life meaning. To obey, irrespective of personal feelings, is the key to the *real* man. Do you not think so, Hans?’

‘Yes, Herr Zweig,’ Hans managed to croak through parched lips.

‘*Duty*!’ Zweig repeated, nodding emphatically, then he pressed Hans down onto his knees and placed his hands on his head. ‘We must learn to *obey*. Do you understand, Hans?’

‘Yes, Herr Zweig, I understand…’

At that very moment, frozen by dread, sick with revulsion, Hans understood that he was a slave, that his fear of Zweig had paralysed him, and that the only future he could imagine was the hell of eternal imprisonment. He closed his eyes and took a deep breath, willing himself to perform his duty, then thought of Zweig’s daughter, Ingrid, that oddly sweet, forlorn girl, and of the American and Saint-Germain and the Tuaoi Stone that Zweig wanted so badly. He let his breath out, hearing Zweig’s carnal sigh above him, and only managed to retain his sanity by contemplating the possibility of some day, some way, turning the table on his psychopathic master and setting himself free.

It was something to think about.

Chapter Ten

Gerry squeezed Ingrid’s hand encouragingly as they stood side by side outside what was, according to the local telephone directory, the house of Klaus Schiller in the small, coastal town of Eckernforde, in Schleswig-

Holstein, in the Federal German Republic.

Not having been to Europe before, Gerry had been in a heightened state of curiosity for most of the journey, taking immense pleasure from Ingrid's learned dissertations on what they were seeing as they crossed the North Sea on the ferry to Hamburg, spent the night in the seaport city like a pair of gauche tourists, then drove north in a rented car from there up to Kiel, and finally along the Jutland peninsula and the bleak Baltic coastline to this small, ancient town that had formerly belonged to Denmark. Now, standing outside the front door of Klaus Schiller's house, his tourist enthusiasm was being replaced by a curiosity that was not without a certain latent fear.

'Well,' Ingrid said, 'you might as well ring the bell. Let's get it over with.'
It was a cold, wintry, late afternoon, with the wind howling in from the Bay of Eckernforde, where all of Germany's submarines were moored, and when Gerry glanced at her through the deepening, rainswept gloom he thought she looked like a pitiful waif from a Charles Dickens novel – her spectacles wet with rain, her pinned-up hair hidden under the gaberdine's raised hood, more rain dripping down her nose and off her chin as the wind moaned about her.
Looking back over his shoulder, at the buildings across the town square, he again saw the modest hotel in front of which he had parked the hired car.
'When we've finished with Schiller,' he said, 'we might as well book into the nearest hotel – that one over there.'
'Yes, Gerry,' Ingrid said, wiping rain from her spectacles. 'Now do we ring the bell or not?'
Sighing, feeling an odd reluctance, Gerry rang the doorbell and waited with increasing trepidation for someone to come and open the door. It opened soon enough, letting light beam out into the street, and standing before him was a short, stoop-shouldered man wearing dishevelled trousers, striped shirt and braces, his face unshaven and cadaverous, his eyes dark and mistrustful, his teeth, when he opened his mouth to speak, almost rotted away.
'*Ja*?' he asked in an unfriendly manner, his voice a guttural croak. '*Was wunschen Sie*?'
'*Entschuldigen Sie*,' Ingrid replied. '*Sprechen Sie Englisch*?'
'Of course,' the man replied impatiently. 'Who are you? What do you want with me?'

‘Are you Klaus Schiller?’ Gerry asked, his skin crawling at the sight of the little man, who looked unwashed and, indeed, as degenerate as Helena Barbanell had said he was.
‘*Ja*, I am. So who are you?’
‘Can we step in out of the rain?’
‘No, you can’t. Now who *are* you?’
‘I’m Gerry Remick, an American writer,’ he lied, ‘and this is Ingrid Zweig, my research assistant. We’re writing a biography on the life of Comte de Saint-Germain, and were told you might be able to help us.’
‘It’s really most urgent,’ Ingrid added. ‘We’re about to put the finishing touches to the manuscript, but our deadline with the English publisher is almost up, which is why we drove all the way to here from London.’
‘You did that for a few minutes of my time?’
‘Yes, Herr Schiller, we did.’
Clearly impressed by this story, Schiller stared at each of them in turn, then shrugged, stepped aside and waved them in.
‘OK,’ he said, ‘enter.’
Following Ingrid, Gerry brushed past Schiller, heard him close the front door, then was led by him along a short, dark hallway filled with bits and pieces of machinery, into a lounge that smelt of decay and had the appearance of a wildly cluttered junk shop. Antique spears, swords and shields were leaning against every wall, the walls were covered with old paintings, and the furniture for the most part was badly stained and broken. Saucers filled with souring milk for the half dozen cats wandering about were resting on various parts of the floor.
‘Here,’ Schiller said, indicating the old pine table in the middle of the room. ‘Take your raincoats off and sit down while I pour you each a glass of schnapps, which should at least warm you up.’
‘You speak very good English ,’ Ingrid said, hoping to pander to his ego while removing her soaked coat.
‘Naturally,’ Schiller responded, filling three glasses with schnapps and bringing one each to Gerry and Ingrid when they had sat at the table. ‘Most Germans do. And I am, of course, an educated man from an illustrious family.’
‘A descendant of Prince Charles, the Landgrave of Hesse-Cassel,’ Gerry said.
‘Quite so,’ Schiller said. ‘Yet I have sunk to this.’ He waved one hand

disparagingly at the surrounding clutter. ‘I sell antiques for a living to abominable tourists, Ach, such is life!’
He sipped some schnapps, wiped his unshaven chin with the back of his free hand, then idly stroked the mangy cat that had leaped onto the table and was prowling around the large goldfish bowl in the middle of it. While stroking the cat, he grinned crookedly at Ingrid, looking her up and down in a bold, suggestive manner, which clearly she didn’t notice since she was staring in disbelief at the goat tethered to the outside handle of the door leading into the back yard.
When Gerry lowered his eyes, feeling slightly embarrassed to find himself recalling Helena Barbanell’s description of Schiller as a degenerate and sodomite, he noticed that the design on the faded carpet was that of the occult pentagram.
‘You must have heard of me through your researches,’ Schiller said in a pompous manner. ‘I have heard that I am mentioned in certain books, though I don’t read them myself.’
Gerry had already noticed that Schiller’s bookshelves contained some of the books that he and Ingrid had read in the British Library Reading Room, some of which had, indeed, made fleeting reference to Schiller, none of which had been important enough to make him feel them worth following up before Helena Barbanell mentioned him. However, he chose to ignore the obvious lie and instead said, lying himself, ‘Yes, we came across your name in certain books and were very impressed.’
Smirking, the awful little man continued to stroke the cat, then casually stuck his hand in the goldfish bowl, grabbed one of the goldfish and threw it onto the table in front of the cat. When the cat pounced on the wriggling goldfish, Ingrid averted her sickened gaze.
‘So,’ Schiller said, watching the cat as it started eating the goldfish, ‘what do you think I can add to your almost completed manuscript?’
‘Can we take it from what we’ve read that you *do* believe in the existence of the legendary Comte de SaintGermain?’
Schiller nodded emphatically. ‘Yes, young man, I do. He lived in this very town, in my father’s former house, and was supposed to have died there and been buried in the graveyard of the Nikolai church. However, it’s highly unlikely that Saint-Germain was actually buried. More likely he *ascended* from the graveyard, which is why my ancestor, Prince Charles of Hesse-

Cassel, was known to have gone there at nights for years after Saint-Germain's disappearance. He went there to consult Saint-Germain when he materialized there, which he often did. When Prince Charles died, his body was buried there – but his spirit joined Saint-Germain.'
'You don't believe that Saint-Germain ever died?'
'As the great Voltaire said: Saint-Germain is a man who never dies. Alas, that is so.'
'Why *alas*?'
Schiller shrugged, then stroked the cat as it noisily gobbled the goldfish.
'Never mind,' he said. 'Let us leave it that Saint-Germain never died – and almost certainly never will.'
He said it flatly, unequivocally, accepting it as a fact, and Gerry found himself thinking of his bizarre experience in the King's Chamber of the Great Pyramid, of the two men, both wearing snow-white *galabiyehs*, staring at him, surrounded by pulsating light and a magical sky. Those men had emerged from the cosmos, from the mysterious world of time, and one of them, the one called SaintGermain, had somehow spanned the centuries.
It was too much to take in.
'What do you mean?' Ingrid asked, 'when you say he didn't die, but instead… *ascended?*'
'Once an ordinary mortal, Saint-Germain emerged from the obscurity of prehistory, probably founded the original, mysterious Rosicrucian Society, and gradually learned from his alchemy the Hermetic secret whereby he became immortal. Now, as an adept, an immortal, a spirit being, he can take human form at will, and has, in such a form, reappeared on Earth throughout the centuries, in many different disguises.'
'And the eighteenth-century Comte de Saint-Germain took physical incarnation as the son of Franz-Leopold, Prince Ragoczy of Transylvania, and Princess Charlotte Amalia of Hesse-Wahnfried, who were married in 1694; was brought up, after his brothers had been taken prisoner by the Austrians and his parents had died, by the executors of his father's will – namely, the Duc de Bourbon, the Duc de Maine, and the Comte de Charleroi and Toulouse – and through them was introduced to the courts of Europe as someone of princely blood and almost royal descent.'
'Which is why he never seemed to need money,' Gerry said.
'Correct,' Schiller said. 'According to the historical work *Illustri Italiani*, by

Caesare Cantu, librarian of the great library in Milan, when this particular embodiment of Saint-Germain came of age, he was educated at the University of Sienna, travelled extensively in Italy and Spain, was well protected by the last Grand Duke of Tuscany, and eventually inherited his father's legacy. He was certainly no penniless adventurer, as described by certain historians.'

Certain historians, Gerry knew, had a tendency to *change* history, to distort it and create a new truth that more suited their own ends. Thinking about it, he became uneasy, knowing that anything was possible, imagining a vast conspiracy, ordained by Saint-Germain, that straddled the whole world and spanned the centuries as if they had never been.

Did such a conspiracy actually exist? And if so, what was its purpose?

He recalled Saint-Germain in the magical light in the King's Chamber of the Great Pyramid, pointing at him and saying, 'You must know that the first number is "one".' In mathematical terms, it certainly was, but Saint-Germain had meant something other than that… The number 'one'. The first number of *what*? The first clue to a vast and incredible conspiracy that had no respect for time or space, being based on pure magic.

Suddenly, Gerry felt dizzy with confusion and excitement, and spoke mainly to hear his own voice, to return to reality…

'And when he wanted to reappear, he simply took his spirit form, after arranging for his disciple and partner in his alchemical experiments, Prince Charles of HesselCassel, to fake his death and bury *someone* in the graveyard of that church.'

'Quite so. We will never know *who* was buried in that grave in 1784, but certainly Saint-Germain's name was entered in the church register, and there, as far as history is concerned, the matter must rest.'

'Is the grave still there?' Gerry asked.

'No. It was destroyed by the great sea flood, or storm flood, of November 13, 1872. A terrible flood. The water roared into the Bay of Eckernford from the Baltic Sea, rising as high as a metre in the streets of the town, sweeping away many buildings, with many lives lost. The whole graveyard, including Saint-Germain's grave, was completely destroyed.'

Another cat jumped onto the table in hopes of wresting the remains of the goldfish from its partner, who responded by clawing savagely at the intruder. The cats were hissing, spitting and clawing furiously at one another when

Schiller, obviously democratic in certain ways, swept the first cat off the table with a sharp sideways blow, reached into the bowl for another goldfish, held it up until the second cat had snatched it out of his fingers, and then watched with interest as it was eaten alive.

'According to Eliphas Levi, the nineteenth-century occultist,' Ingrid said, repeating what she had read in the British Library and trying to avoid the disgusting sight on the table, 'the Comte de Saint-Germain was born in Lentmeritz in Bohemia, the bastard son of a leading Rosicrucian.'

'A confusion between history and *pre*history,' Schiller corrected her. 'The details of the eighteenth-century SaintGermain are exactly as I told you: he was born in the late 1860s in Transylvania and brought up in the court of Vienna. However, Levi's confusion arises because SaintGermain, in a previous incarnation – either as the son of Christian Rosenkreuz or *as* him – was instrumental in the formation of the original Rosicrucian Society.'

'A society to which you once belonged,' Gerry said.

Schiller spat disgustedly into one of his hands, then rubbed both hands together. 'Ach!' he exclaimed contemptuously. 'That bunch! The modern Rosicrucians have their roots in California – and I think that speaks for itself. I joined because I thought they might connect me to my past, but they threw me out because of my loudly proclaimed belief that they had nothing to do with the real Rosicrucians, who emanated in mysterious circumstances right here in Germany.'

'Right,' Gerry said. 'I've read up on all that. The first *printed* records we have of the original Order were published in 1614 in Hesse-Cassel, where Prince Charles, your ancestor and Saint-Germain's disciple, came from. It was that pamphlet, entitled *Fama Fraternitas of the Worthy Order of the Rosy Cross*, that first mentioned Christian Rosenkreuz, saying he'd spent his life wandering the East in search of occult wisdom, found it, and subsequently formed the Brotherhood of the Rosy Cross, now known as the Rosicrucians, and managed to live to be a hundred and six years old.'

'Yes,' Schiller said. 'It is believed that the author of that work, plus two subsequent works on Rosenkreuz and the original Order in general, were written by a minister, Johann Valentin Andraea, in Tübingen, also right here in Germany, where the first of the genuine Rosicrucians met. Central to the work of Andraea and the Rosicrucian beliefs spread *by* that work were two obsessions: one, the concept of a Utopia of superior beings; and, two, the

nature and uses of alchemy, particularly as a means of transforming men into gods.'
'Could Johann Valentin Andraea have been another incarnation of, or pseudonym for, Saint-Germain?'
'Almost certainly,' Schiller said, smiling smugly at Gerry and stroking the cat as it tore the wriggling goldfish to shreds.
'The facts certainly fit,' Ingrid pointed out. 'From 1710 to 1822, Saint-Germain apparently travelled extensively, taking in most of Europe, Africa, India and China. He claimed to have been at the Court of the Shah of Persia from 1732 to 1742, where reportedly he acquired his considerable knowledge of diamonds and other precious stones, as well as learning his most advanced secrets of nature and alchemy. Certainly he was reported as being able to speak Italian, French, Spanish, Portuguese, English, Chinese, Hindu and Persian – a remarkable achievement by any standards. In a letter to Graf von Lamberg he claimed to have gained his knowledge of melting jewels during his second journey to India in 1755, having gone there with General Clive, more widely known as Clive of India. He was also reported to be deeply involved in esoteric Orders, including the Rosicrucians, Illuminates, and Templars.'
'It is my belief,' Schiller said, 'that Saint-Germain, whatever his most distant origins, founded the original Brotherhood of the Rosy Cross, or the Rosicrucians, and that Christian Rosenkreuz and Johann Valentin Andraea were one and the same – in short, Saint-Germain.'
Gerry felt unreal, as if haunted by ghosts, and found himself staring around the gloomy, cluttered room into shadowy corners. He kept expecting to see that strange, pulsating light, the magical blending of time and space, the materialization of Saint-Germain and his mysterious partner… He sensed that they were somehow watching him and Ingrid wherever they went – and would not let them escape.
He simply didn't know why.
'In the British Museum,' he heard Ingrid say, 'there are pieces of music, dated 1745 and 1760, reportedly composed by, and certainly signed by, Saint-Germain. Do you know of anything else that might more firmly substantiate his existence?'
'Yes,' Schiller replied without hesitation. 'Although Saint-Germain has been highly successful throughout the centuries at destroying, or hiding, most of

the evidence for his existence, there *is* a document written by him that still exists and is preserved in the library of Troyes, in France. If you haven't yet read it, I suggest you do so. It is *most* interesting.'
'Are you willing to tell us what it says?' Gerry asked.
'No. You must view it for yourself. Believe me, it is well worth the journey.'
Smirking in what seemed to Gerry to be an oddly fearful manner, Schiller swiped the second cat off the table and then picked up a third that had been rubbing itself around his ankle. Resting this cat on his lap, he stroked it with one hand, reached into the fish-bowl with the other, pulled out a wriggling goldfish and slowly, sadistically, lowered it over the cat's gaping jaws.
Gerry took a deep breath, feeling nauseous, then lowered his eyes and said, 'What kind of man, or being, is Saint-Germain? Is he good or evil?'
'Is *he* good or evil?' Schiller sneered as the cat snatched the unfortunate goldfish from his grubby fingers. 'Am *I* good or evil? Are *you*? I only know of his existence through my family's written records, as well as those of recorded history, but believe that my personal misfortunes have been caused by my proclaiming that he was actually Christian Rosenkreuz in one of his many incarnations. It is Saint-Germain's *vengeance*. Of that, I am sure. He has placed a curse upon me, ruining me and all I touch, slandering the name of the once-illustrious family out of which his own greatest disciple, Prince Charles of HesseCassel, sprang. This is his revenge for my having revealed one of the Order's most closely guarded secrets: the true identity of its original founder, the adept known as SaintGermain.'
'You have no proof of that,' Gerry said.
'I *know*, young man. *I know!*'
Agitated, Schiller threw the cat to the floor and stood up to go to the back door, where he shuddered and stared down at his tethered goat, his brow furrowed in thought. Gerry caught Ingrid's despairing glance, knew she wanted to escape from this dreadful house, but couldn't bring himself to take his leave without asking the disgusting little man some more questions.
'Do you dabble in the occult?' he asked him.
'I *was* a Rosicrucian,' Schiller said, still keeping his back turned to both of them, still studying the tethered goat.
'Rosicrucian occultism is supposedly concerned with the long-term betterment of mankind. Is that what you practice?'
'You think the Rosicrucians are committed to doing good? Perhaps, centuries

ago, but who knows the purpose or nature of an Order in which the greatest adepts have become immortal and know no limitations? I am frightened of Saint-Germain, as many people are, and have turned away from the old ways of the Order to practise their opposite.'
'You mean black magic?'
'Yes.'
'Does the number "one" mean anything to you in terms of the occult?'
'No,' Schiller said, finally turning back to face them, letting Gerry see, in his shadowed eyes, a smouldering malevolence that turned his blood cold.
Ingrid gasped, kicked her chair back, stood up and glanced at Gerry, her hand covering her mouth, her wide eyes magnified behind the thick spectacles.
Gerry felt concern then, and stood up, still facing Schiller. He tried to meet that darkly burning malevolence, but felt himself shivering.
'You didn't come all this way just because you read about me in a book,' Schiller accused him. 'You must have talked to someone about me. *Who sent you here*?'
The vehemence in his voice startled Gerry, making him take a step backwards, but he managed to keep his voice calm when he said, 'An old woman called Helena Barbanell. She was once a member of the Theosophic Society, but like you, she was excommunicated when she…'
He stopped talking when Schiller approached him, his face contorting with hatred and a great deal of fear.
'*Barbanell*?' he asked hoarsely. 'You talked to Helena Barbanell? *When*?'
'Two days ago. On Friday afternoon.'
Schiller was aghast. 'God,' he said, his voice hysterical, 'don't you know what you've done, you young fools? Whoever killed Helena Barbanell has probably followed you here!'
Gerry's thoughts swirled in confusion. '*Killed*?' he said, feeling stupid. 'Helena Barbanell was killed?'
'She was murdered on Friday afternoon. 'The same day you saw her. It's in all the British newspapers. *Damn you, get out of here*!'
He picked up one of the swords leaning against the nearest wall and swung it wildly over his head. Ingrid shrieked and reached out to pull Gerry away as he ducked and the sword cleaved the air where his head would have been.
Schiller kept screaming abuse and swinging wildly with the sword as Gerry tugged Ingrid behind him, then, still facing Schiller and ducking the swinging

sword, made his way backwards out of the room and along the dark corridor with the many cats hissing and spitting and biting at his feet in a ravenous, unnatural fury.
He heard Ingrid opening the front door, felt her tugging him backwards, then, once outside, he slammed the door closed in Schiller's furious face as the wind beat at him.
He found himself staring dazedly at Ingrid, at her magnified, frightened eyes, then took her hand and hurriedly led her away through the deepening darkness, into the howling wind and drenching rain.

Chapter Eleven

Gerry was still feeling badly shaken by his experience with Klaus Schiller when he sat facing Ingrid in the almostempty restaurant of the modestly-priced hotel located opposite Schiller's house, at the other side of the town square, and found himself greatly lacking in appetite for food while being keen to drink as much *Liebfraumilch* as possible. What had started out as an exciting adventure was rapidly turning into a living nightmare, and the knowledge that Helena Barbanell had been murdered shortly after his and Ingrid's departure, combined with Schiller's almost inhuman malevolence and terror, made that nightmare all the more real and his feeling of danger more riveting. 'You always tell me to look after myself,' Ingrid said,

'and now you're not even eating.'
'I'm on a liquid diet,' Gerry retorted.
'That's not remotely funny,' Ingrid said primly. 'You

shouldn't drink *at all* on an empty stomach – and it certainly won't calm you down.'
'I don't need calming down.'
'Yes, you do. Your hands are shaking. Every time you fill your glass up, you spill it, so let's not pretend otherwise.'
Gerry wiped the spilt wine off the table with his paper napkin.
'OK,' he said, 'I'm a bit shaken up. Who wouldn't be? I can't get over the fact that Helena Barbanell was murdered shortly after we left her. I think that's real scary.'

‘Yes,’ Ingrid agreed, ‘it’s scary. But I don’t think Saint-Germain had anything to do with it. I think my father’s men murdered that poor woman. There were two men standing by an Audi car when we left, and they approached Helena Barbanell’s building just as we turned the corner. I believe they forced her to tell them what she told us – and then shut her mouth for good.’
‘That sounds logical.’
Ingrid shuddered. ‘Oh, yes… And if Miss Barbanell talked, those men know that we were planning to come here and they probably have, as that revolting Schiller believes, followed us here. They’re possibly here, in this very town, right now.’
‘Yes, Ingrid. Exactly.’
Gerry picked in a desultory manner at his food, drank some more wine, glanced at Ingrid, yearned deeply to possess her, but knew the time wasn’t right. This was no time for love and romance. They were caught in an everexpanding web of intrigue and now it was becoming truly dangerous and increasingly frightening.
‘Maybe we should stop this,’ he said. ‘Get out while we can.’
‘It’s too late for that now,’ Ingrid said. ‘My father won’t rest until he finds us. And that still leaves our mysterious Saint-Germain. Besides, I won’t give in again. I won’t surrender my freedom.’
She stared defiantly at him and he felt himself glowing inwardly, filled with pride at how far she had come in such a short time. His timid mouse was turning into a formidable lady.
‘Let’s visit the church before it closes,’ he said. ‘Let’s do that at least.’
‘Yes, Gerry, let’s do that.’
Feeling pretty drunk, but too shaken to be stupid, Gerry paid the bill and led Ingrid out of the dismally empty restaurant, into the nearly dark, late afternoon *strasse*, with its cold wind and stinging rain. While not yet dark, the streetlamps had been turned on and their light, beaming down on the pavements, had a wan, eerie quality.
Gerry felt disorientated, far removed from his home in New York, disassociated even from the personality that he had assumed was himself. In this quiet, ancient town, in its desolate, rainswept streets, he felt haunted and threatened.
They reached the Nikolai church soon enough and found it still open. The

parish priest looked as lonesome as the town, but was kindly and helpful. He showed them the church register, left them with it in the vestibule, departed as Ingrid translated aloud what she could see by torchlight.

Deceased on February 27th, buried on March 2nd, 1784.
The so-called Comte de St Germain and Weldon. Further information not known. Privately deposited in this church.

Ingrid kept the torchlight on the register for quite some time while Gerry just stared at the entry in German, feeling that he had stepped back in time and become someone else.

'Well,' Ingrid said, 'there it is. Your authentic church record. And according to the *church*, Saint-Germain was buried in these grounds on the second of March, 1784.'

'Yes, Ingrid, that's right. At least according to the parish priest who wrote this particular entry when the church graveyard still existed. But don't forget that Prince Charles *was* the Landgrave of Hesse-Cassel, that he was therefore a man of great influence in the community, that he was bound to have given considerable financial aid to the church, and that it would have been easy for him to have either buried someone else here without the parish priest of the time knowing, or even, if the parish priest knew that Saint-Germain had simply fled, bribing him into keeping his mouth shut and writing a false entry about his supposed death. Either way, this particular entry, even if genuine, doesn't necessarily mean what it says. And what we're still left with, according to Helena Barbanell and Schiller, is that the Saint-Germain who supposedly was buried here is actually still alive and well.'

Ingrid didn't reply, but he knew what she was feeling. Like him, she would be feeling that she was living a dream, slipping into an unknown zone where time and space had no meaning. Like him, she would be feeling disorientated and increasingly unreal.

Behind him, the wind howled, the rain splashed on the ground. He shivered. 'Come on,' he said, 'let's go.'

They returned the register to the parish priest, thanked him and left, heading back through the narrow, rainswept streets, illuminated by lamplight. Then Gerry saw another light, a flickering yellow glowing near the square; saw smoke and then heard sirens wailing as they hurried back to the town square.
‘Oh, no!’ he heard Ingrid murmur.
He understood what the phrase signified and, feeling a surge of fear, tightened his grip on her hand and started running. When they reached the square, which they did in no time at all, a crowd had already gathered to watch the spectacular blaze, and the firemen were fighting a losing battle with the burning house of Klaus Schiller.
Gerry caught Ingrid’s frightened look, then waited impatiently while she spoke in German to the woman standing next to her. When she had finished, she stared intently at the blazing building, bit her lower lip, then said, ‘This woman, a local, says that Schiller is dead. Before the fire started, he was heard screaming for help, but before anyone managed to get to the house, there was some kind of an explosion, then the whole house went up, bursting into flames. It’s believed that Schiller died in the explosion; if not, he burned to death.’
Gerry just stared at her, not knowing what to say, but sharing the dread he saw reflected in her eyes. She shuddered, shook her head from side to side, pressed her forehead to his chest, and he put his arms around her and held her close to him. She was melting into his embrace, letting her body merge with his, but then she stiffened, straightened up, stepped away, and, looking even more fearful, indicated with a nod of her head that he should look behind him.
Glancing back over his shoulder, to the far side of the *strasse*, he saw two men in black gaberdines, standing apart from the otherwise anonymous crowd of onlookers, their expressionless faces illuminated fitfully in the glowing of the flames rising from Klaus Schiller’s house.
When they saw him watching them, both men smiled maliciously, then melted back into the darkness of an unlit side street.
Even as he was watching the men disappearing into that side street, Gerry had the distinct feeling that he was himself being observed. Dazed, feeling drugged, he looked past Ingrid’s head… and was almost hypnotized by the silvery-grey gaze and diabolically handsome features of the same unknown man he had seen with Saint-Germain on the deck of the boat cruising along

the Nile.
This time, he didn't experience that disturbing, unnatural desire for the stranger staring so hypnotically at him, and was, in fact, almost instantly able to jerk himself out of his brief, trance-like stupor and start forward, determined to confront the mesmerist. However, before he could reach him, the man smiled in a teasing manner, nodded as if in acknowledgement of Gerry's presence, then turned and hurried away, soon losing himself in the crowd of locals still watching the burning home of Klaus Schiller.
'Christ,' Gerry said to Ingrid. 'They've *both* got people on our tail – Saint-Germain *and* your dad. Which one of them had Schiller murdered? That's what *I'd* like to know.'
'Let's go back to the hotel, Gerry. *Please*. I'm scared. I don't like it here.'
He knew what she meant, actually felt the same way, and so willingly took her by the elbow and led her away from the crowd. Once upstairs in the hotel, they started heading for their separate rooms, but then Ingrid stopped, stared forlornly at him, and said, 'I can't stand the thought of being alone tonight. Can I stay in your room?'
'Sure,' he said. 'Naturally.'
He opened the door and waved her in, stepped in behind her, closed and locked the door, then shivered with cold and rubbed his hands together. Ingrid shivered also, then took off her overcoat; she passed it to him and sat on the edge of the bed while he hung the coat in the wardrobe. When he turned back to face her, she was frowning and picking something off his pillow. She held it up in the light, swung it on its short string, and looked closely at it.
It was a tiny steel swastika.
There was a label tied to the string, and Ingrid, holding it close to her spectacles, studied it carefully.
'Compliments, Saint-Germain,' she read aloud, then glanced up with frightened eyes.
Recalling the teasing smile of Saint-Germain's mysterious partner, when he had seen him in the town square just a few minutes ago, Gerry didn't know whether he should be angry or even more fearful.
'Ring through to Reception,' he said, 'and ask them if anyone's been in the room during the past hour or so.'
Ingrid did so, speaking in German, then placed the phone back on its cradle

and shook her head from side to side in a negative gesture.
‘No,’ she said. ‘The desk clerk swears that no one’s been in this room or anywhere near it since we left it.’
‘Did you feel that she was lying?’
‘No. She sounded absolutely sincere. Genuinely puzzled that I should ask. I don’t think she was lying.’
‘Then how the hell did that swastika get there?’
Ingrid glanced down at the swastika, which she had placed back on the pillow. She reached out to pick it up, but her hand shook and she instantly withdrew it.
Gerry picked it up instead and studied it closely.
‘Well, it’s a normal swastika,’ he decided. ‘A good, old-fashioned, Nazi swastika. The question is: what’s it meant to tell us? And *I* think it’s Saint-Germain’s teasing way of confirming that your dad’s men – not SaintGermain’s – arranged that explosion in Schiller’s house. And that, in turn, confirms that it was also your dad’s men
– not Saint-Germain’s – who murdered Helena Barbanell in London, shortly after we left her.’
‘Oh, God,’ Ingrid murmured, suddenly looking ill and gazing down at her clasped hands.
‘So,’ Gerry said, wanting to sympathize with her but not knowing how, ‘we now know we’re being tailed by two different parties – your dad’s men and Saint-Germain’s lot
– and that for some reason Saint-Germain is actually *encouraging* us to continue our search, while protecting us from your dad’s men.’
‘But… *why*?’
Gerry shrugged. ‘Presumably he has his reasons and we’ll discover them in due course. In the meantime, we just have to keep going and try to unravel the mystery as we go.’
Without thinking, he glanced around the room, realized what he was doing, felt foolish and turned back to Ingrid, who, still seated on the edge of the bed with her hands clasped in her lap, looked extremely uneasy and forlorn.
‘So what have we got so far?’ Gerry asked. ‘We have the extraordinary fact that Saint-Germain is almost certainly still alive; that he seems to have either lived for centuries or been reincarnated many times; that he’s considered by many people, such as Helena Barbanell and Klaus Schiller, to be some kind

of magical adept, possibly the founder of the original Rosicrucian Society, and maybe even a member of some kind of secret society that has its origins in ancient history and has managed to survive to the present day. What's the purpose of that society? And why's Saint-Germain guiding us to it? At the heart of all this is the number "one", but we don't yet know how or why. What we *do* know is that Saint-Germain teased us into investigating him and finding out that he actually still exists. Obviously he wanted us to know at least *that* much. Equally obvious is the fact that he wants us to continue tracking down any clues we get. And since Schiller told us to visit the library in Troyes, where the only document known to be written by Saint-Germain still exists – apart, that is, from the music scores in the British Museum Library – we have to make that our next stop. Are you still game for all this?'
Ingrid looked up from her clasped hands, her face drawn and pale. 'Yes, Gerry, I am.'
'Are you frightened?'
'Of course.'
'Well, so am I. But fear's a healthy emotion. As long as we feel fear, we'll keep our wits about us. Though right now, dear God, I feel tired… maybe too tired to sleep.'
'Me, too,' Ingrid murmured.
She lay back on the bed, closed her eyes briefly, opened them again, held her arms out to him and said, 'Come here. Lie down beside me. I want you to hold me – nothing else. I don't want to sleep alone.'
Exhausted, bewildered and more than a little nervous, Gerry was nonetheless touched enough by the sight of her to get a lump in his throat. Taking off his own soaked coat and kicking off his shoes, he lay beside her, drew the duvet over both of them, took her in his arms, kissed her eyelids and pliant lips. She returned his affection, but too quickly closed her eyes, and he held her, stroking her face and hair, until she was sleeping.
He lay with her a long time, taking warmth and comfort from her, then quietly slipped out of the bed and went to the window. Down below, the onlookers had begun to disperse, but the house of Klaus Schiller, which had become his crematorium, was still blazing in the night, sending flames and sparks and billowing smoke into the sky, the sparks cascading colourfully around the odd, distant star, while the black smoke, dense and slightly frightening, obscured the full moon.

The fire blazed a long time.

Chapter Twelve

Gerry lay on his narrow bed in his shabby room in a modest *auberge* in Troyes, in the Aube department of north-central France, still feeling hungover from his drunken evening the night before in Frankfurt-am-Main, Germany.

They had arrived in Troyes half an hour ago in the middle of a heavy rainstorm, and the rain was still beating down outside, falling from thunderous black clouds that only served to make the unattractive town seem even more bleak. Already feeling trapped, depressed and very nervous, Gerry swung his legs off the bed, opened one of the cans of beer he had purchased downstairs, then sat back on the bed to have his drink and ponder what had actually happened to him during the past twenty-four hours or so.

After leaving Eckernforde, they had driven all day and spent the night in Frankfurt-am-Main, booking into a small hotel on the south embankment of the river and then relaxing in one of the many taverns of the lively Sachsenhausen quarter. They had both felt the need to relax, since their otherwise pleasant journey had been overshadowed by what they had learned from their waitress over breakfast in the hotel in Eckernforde.

According to the wide-eyed, excited waitress, the town was rife with rumours that the charred corpse of Klaus Schiller had been found handcuffed to the gas oven in what had formerly been his house; and it was obvious from the remains of the oven that all the taps had been turned on.

‘The bastards probably set a lighted candle near him,’ Gerry said to Ingrid as she drove him away from Eckernforde. ‘He was heard screaming for help just before the escaping gas was ignited, but then, when the gas exploded – fffttt! – that was the end of him. Oh, boy, what a way to go!’

He had regretted his comment when he saw Ingrid shudder, and remembered that the man who had committed the awful deed had almost certainly been in the employ of her vicious dad. Instantly ashamed of himself, he reassuringly

patted her knee, mailed her a grin, then stared straight ahead at the road which, unwinding between the sea and the lakes just north of Kiel, had eventually led them to Frankfurt.

Relaxing with large beers, beginning to feel like a regular tourist, he had gradually started forgetting the fears that had been dogging him and instead found himself falling in and out of romantic reveries about Ingrid, wanting to hold her and be held *by* her; but also thinking, more basely, about the forthcoming night and fantasizing about sharing a bed with her.

When he had glanced sideways at her studious, bespectacled face, slightly obscured in the cigarette smoke that fouled the air of the packed, noisy tavern, and thought of making love to her, he flushed as much with guilt as with desire, since he knew that by bringing her with him on this journey, he had almost certainly placed her in danger.

'Whenever I start worrying about all this business,' he had told her in the hope of relaxing her, 'I think of quantum mechanics, which now lies at the heart of all modern science. Without quantum mechanics there would be practically no chemistry, science or molecular biology, no knowledge of DNA, no genetic engineering – hardly anything at all. In fact, quantum theory is the great single achievement of science, surpassing even the Theory of Relativity… and yet, according to quantum mechanics, *nothing's real unless it's observed*. In other words, Ingrid, don't worry too much. Until we actually *observe* SaintGermain's magical powers, neither he nor they can actually exist.'

'But we *have* observed them, Gerry.'

'No, Ingrid, I don't think we have. I think we've just *dreamed* about them.'
'I haven't observed quantum mechanics,' Ingrid said, 'so *they* don't exist.'
'What a bright girl you are.'
He had joked with her to hide his own fears, as well as his desire, but his more sensual feelings had nonetheless only been inflamed when, after talking about everything from Saint-Germain to Ingrid's father, Wilhelm Zweig, to antimatter and supergravity, from their respective, *real* childhoods to their

magical meeting on the cruise ship in Egypt, he had drank a couple of whiskeys on top of his many beers and promptly became rather light-headed.
‘This whole business is no more real to me than Schrodinger’s Cat,’ he said. ‘Did you know that a charged pion can transform a neutron into a proton by interacting with a proton that becomes a neutron? Have you worked that one out? Good! Now, if you want to understand how *unreal* the real world is, you have to accept that your proton, a product of the mathematically impossible, can itself explode into a vast network of interacting particles, then vanish back into itself. Having itself appeared out of nothing, the non-existent proton’s numerous particles also appear out of nothing, recombine with one another, then disappear before the universe at large even notices that they were present in the first place. Similarly, a photon that doesn’t actually exist can create a positron/electron pair that instantly interact to produce the photon that created them in the first place, since the photon doesn’t know the difference between the past and the future – something we might also say for Saint-Germain, if what we’ve so far learnt about him is true.’
‘Saint-Germain is real, Gerry.’
‘Is he? I’m not so sure. We’re back to quantum mechanics again. Let’s imagine Saint-Germain as an electron, chasing its own tail in a time eddy. What I mean by this – and please stop me if I confuse you – is that according to quantum mechanics, an electron can appear out of nothing, out of nowhere, the non-existent, then travel a short distance, realize its mistake – that it’s actually unreal – then turn around and travel back through time to its starting place, thus having never existed in the first place… and it repeats this again and again, in one sense never actually existing, in another existing eternally in an ever-scattering time-event. Does that help explain SaintGermain?’
‘No, Gerry, it doesn’t.’
‘Then I’m a pretty poor teacher.’
In his sublime state of inebriation he had kept talking to her, hardly aware of what he was saying, only recalling later, with no great deal of pride, that at some point in the evening he had slyly dropped his hand on her knee and hoped for the best. She was wearing blue denims, but he had felt her warmth through them, and when she made no attempt to remove his hand, he just let it rest there, surprised that he could feel so self-conscious about such a small thing.
‘It’s such a small thing to feel your knee,’ he recalled saying in a grand, if

slightly slurred, manner, ‘but it means a lot to me.’
‘Oh, good,’ she responded.
Becoming even more drunk, with exhilaration as well as whiskey, he had kept his hand on her knee, even moved it slightly higher, squeezing her there, and was delighted when she simply smiled at him, instead of removing his hand, and once or twice actually patted it affectionately, which he took for encouragement.
‘I feel good,’ he was certain he had said, ‘despite what we’ve been through.’
‘Let’s hope it lasts, Gerry.’
Unfortunately, it didn’t. His mood of romantic reverie had been brutally broken when, over another, doubtless foolhardy whiskey, he suddenly fell back into a feeling of unreality by remembering how, when driving earlier that evening through the deepening darkness of the countryside just outside Frankfurt, he had experienced a prickly sensation on the back of his neck, and had the distinct, inexplicable conviction that he and Ingrid were not alone in the car.
Confused, he had glanced back over his shoulder at the road receding behind him, but saw nothing other than the trees on both sides of the darkening road. Turning back to the front and concentrating on the road ahead, trying to convince himself that he was simply imagining things, perhaps due to exhaustion, he nevertheless was unable to shake off the feeling that he and Ingrid were not alone, that if the unseen presence was not actually in the car, then it must be outside…
In truth, the last hour of that drive into Frankfurt had been hellish. As he drove, he kept imagining he could see something out of the corner of his eye, first left, then right… could *hear* something… or *feel* something… just above the car, behind it, sometimes alongside it… and for the rest of the drive to the hotel in Sachsenhausen, had found himself glancing frequently out of the car windscreen and windows, scanning the sky, convinced that something unseen, yet something *real*, was somewhere out there in the night, nearby, deliberately following them…

Now in the modest *auberge* in Troyes, shivering to recall that frightening drive to Frankfurt, still exhausted by the subsequent drive from there to France, he finished off his beer, washed himself as best he could in the chipped sink in the corner of his dismal room, put on a thick, roll-necked

pullover and jacket, then pulled the curtains apart and looked down on the dark, rainswept street.

It was deadly quiet down there, not at all like lively, noisy Sachsenhausen, and he realized that he no longer enjoyed silence… nor dark, empty streets.

He checked his wristwatch. He and Ingrid had agreed to have an hour's rest and then meet downstairs in the *auberge's* small bar, prior to going together to the library of Troyes before it closed for the evening. Still twenty minutes early, but feeling unsettled, he decided to go down anyway and have another drink while waiting for her.

Leaving the room, he closed the door firmly behind him, checked that it was locked properly, then walked past Ingrid's room, put his ear to the door, heard nothing, so made his way down the stairs and into the lobby where the bar was located. Luckily, the woman serving in the bar was bright and cheerful, instantly making him feel more positive. After ordering a glass of *vin rouge*, he took a table in the far corner of the room, trying not to think of what had happened the night before, but unable to stop himself…

Drunk and light-headed, his conflicting emotions heightened, he had left the tavern in Sachsenhausen with Ingrid and walked with her, not too steadily, back through the gaudy, lively streets of the picturesque quarter to their modest hotel, where he had hoped to be suave and casually seductive, to woo her with insolent charm and carry her off to his room, but instead, his thoughts in turmoil, his emotions too chaotic, had simply stopped at her door, in the silence of frustrated longing, to give her a tentative kiss on the lips and whisper, 'Good night.'

That much, at least, he recalled with certainty. What he could not know for certain was how he had spent the rest of that evening and the early hours of the morning…

He remembered tossing and turning most of the night in a fever of frustrated desire and vivid erotic fantasies, loathing his own cowardice, cursing Ingrid's painful shyness, wanting to get up and storm into her room, constantly listening for her knock on his door, for her highly romantic, white-robed,

wraith-like entrance… But none of those things happened, as he knew they would not, and eventually he had dozed off, falling in and out of restless sleep, hardly knowing when he was dreaming or simply *imagining* himself with her, scarcely knowing the difference between the real and the unreal… which was why, when the manifestations came, he initially thought they might be a nightmare.

He had opened his eyes upon hearing something, or because he *felt* something; realized it wasn't a sound, but actually some kind of *pressure* – something pressing upon him, invisible, heavy, amorphous, and definitely *unnatural*. He had felt crushed, suffocated, touched by an alien heat… and then, even as he tried to sit up, and failed, had noticed a faint, pulsating light spreading over the ceiling.

He had managed to turn his head. The light was beaming in through the window. Then at last he heard the sound – or, at least, somehow *felt* it – a rhythmic bass humming, a pulsating sound that matched the pulsating light.

That sound, or that *pressure*, combined with the rhythmic pulsations of the pale light, seemed to press him back onto the bed and force his gaze inward. He saw the tracery of his own veins, the cataracts of his stomach, and spiralled down through the whirlpools of his blood to the source of himself.

At first there was darkness, complete, terrifying, then a speck of light appeared, multiplied, became a cascade, and he travelled down through somersaulting space and time until his hotel room reappeared.

Saint-Germain was standing in front of him, by the foot of the bed, his unblinking gaze visible through the pulsating light in which they were both held. The other presence was his partner, the diabolically handsome mesmerist, and both men, gazing down through the magical light, possessed a shimmering beauty.

Saint-Germain smiled at him. Gerry tried to speak, but failed. He was numb and struck dumb and paralysed, left with nothing but vision.

The light brightened around the two men, though it didn't hurt Gerry's eyes.

But then he started to suffer in another way… and it was unbelievable.

He felt himself disintegrating, flesh and bone turning to dust. The pressure closed in around him like an invisible vice, crushing him, breaking him, reducing him to a pulp – and then just as it reached the point where it was virtually unendurable, he found himself jerking upright on the bed, screaming in terror.

The pulsating light blinked out. The two men, the apparitions, vanished with it, sucked back into a whirlpool of darkness.

Gerry had sat there for a long time, shaking, trying to breathe; had wiped sweat from his brow, licked his parched lips, and stared around the dark, silent room, at the ceiling, the window.

Everything was normal. He must have been dreaming. He groaned and lay back on the bed and waited impatiently for dawn to break, praying that he'd been dreaming, whispering, 'Yes, a dream, just a dream,' but convinced in his heart that it had happened, maybe not for the last time…

He didn't want to think about it, but couldn't stop himself; though now, in this hotel, in Troyes, France, in the brightly lit bar, he had doubts about himself, recalling that he'd been drunk at the time of the incident, and wondering if he couldn't, after all, interpret what had happened as no more than a terrible dream.

When Ingrid finally entered the bar, he felt a lot better.
Obviously prepared for the rainstorm outside, she was wearing a plastic mac with a hood, and black leather boots.

Quantum mechanics , Gerry thought. *Because I see her, she is*.
'I might have known you'd beat me down to the bar,' she said. 'Have I time for a drink?'
'No,' he replied, hurriedly finishing off his glass of *vin rouge* and immediately standing up. 'That library's going to be closing soon, so we'd better get going.'
Taking her by the elbow, he led her out of the bar, across the small lobby and

out of the building. It was now as dark as night, the wind howled, the rain lashed them, but luckily the car was parked out front and they were able to get into it before being completely soaked.
Once strapped in, and before Ingrid, who was driving, could turn on the ignition, Gerry surprised himself by saying, ‘Don’t start the car yet, Ingrid. I’ve something to tell you. I want to tell you before we get to the library, though I’m not too sure why.’
Her hand fell away from the ignition key and she turned her head to stare at him.
‘Oh?’ she said. ‘What?’
‘Remember I told you about my feeling that we were being followed – or *observed* somehow – as we drove to Frankfurt yesterday?’
‘Of course.’
‘Well, I had a bad sleep last night – a *very* bad sleep – and I’m still not sure if something actually took place or if I just dreamt it. You want me to tell you?’
‘You think it’ll frighten me?’
‘It might.’
‘Why not try me?’
Taking a deep breath, not too sure if he was doing the right thing, Gerry told her about his dream, or *experience*, of the previous night. When he had finished, Ingrid looked surprised rather than frightened, then surprised *him* by telling him that she’d had a similar experience.
‘A *similar* experience?’ he asked, not quite believing it.
‘Yes, Gerry. Not the same experience, but similar – at least in the sense that I dreamed about Saint-Germain, and actually felt that I was *living* the experience with him. Now we’d better get going or we’ll miss that library.’
So saying, she started the car, pulled away from the kerb, and moved off through the violent storm, along the lamplit street, keeping her eyes fixed straight ahead, sometimes biting her lower lip, soon passing between the half-timbered, 16th century houses of the old town.
‘Even now I’m not sure if I was sleeping or awake,’ she said. ‘But my feeling is that it *was* some kind of real experience. And, just as it was with you, so, with me, the experience began with that strange, pulsating light, though in my case it materialized out of the wall, not the ceiling.’
‘Like it did with me in London.’

‘Right. Then it expanded and seemed to fill the whole room and, when I tried to sit upright, it pressed me back onto the bed. Then I saw Saint-Germain – the same man we talked to during the Nile cruise – and with him was another man, extremely handsome, smooth and decadent, whose smile had an odd effect on me, making me dreamy and… *wanting* him.’
She hesitated when she confessed this, and Gerry grinned, actually feeling amused. ‘He made me want him as well – and I’m not gay – so don’t worry about that.’
‘Anyway,’ she continued, clearly relieved at his response, ‘they both materialized in my room, in that bizarre, pulsating light, stared at me, both smiling enigmatically, almost mockingly, and put me into a kind of wide-awake trance. Then the walls of the room appeared to dissolve and were replaced by other walls, other places… God, it was *weird*!’
‘Go on!’ he encouraged her.
‘First, I saw what I somehow knew to be the Anitchkoff Bridge across the River Neva, in old St Petersburg, then a small street named Grafsky, through which horse-drawn carriages were clattering. Then I found myself wearing eighteenth-century clothing, with a lot of jewellery around my neck and arms, sitting in an antique chair, listening attentively to Saint-Germain – also in eighteenth-century clothing and with many jewelled rings on his fingers – as he played a violin that sounded remarkably like a full orchestra.’
‘He *did* have that reputation,’ Gerry assured her.
‘Anyway, when Saint-Germain finished playing, he turned to another man – one surrounded by beautiful paintings – and showed him a piece of music bound in red maroquin, which he explained was an air for a harp, composed by himself and to be dedicated to one Countess Ostermann.’
‘That makes sense. Saint-Germain *was* in St Petersburg, now Leningrad, in 1762, where he stayed with various high-class folk, including the famous Italian painter, Count Rotare, whose paintings are now in the Peterhof palace. Rotare *did* live in the Grafsky *pereoulok* – which means “small street” – at that time. Saint-Germain was then well known for his own remarkable artistic talents; and he *did* compose a piece of music in 1760 – the one we found in the British Museum.’
‘Very good, Gerry. So…’
‘Yes?’
‘Saint-Germain then turned to me and smiled… and it all dissolved to

become something else… Suddenly, it was an eighteenth-century laboratory in a suite of rooms in a great château, and Saint-Germain, surrounded by young men, all wearing similar clothing, was experimenting with what looked like paint. Around the walls of the laboratory were oil paintings of an unusual vividness – paintings that seemed to live and breathe, overwhelming my senses.'

'The Renaissance château at Chambord,' Gerry could not resist informing her, 'south-west of Orléans in France. King Louis XV gave Saint-Germain a suite of rooms there in the late 1750s, and the mysterious gentleman turned them into a laboratory for his alchemical experiments, most notably those involving paint and the transformation of diamonds. Other guests at that time included the Princess of Anhalt-Zerbst, mother of Catherine II of Russia; the Marquise d'Urfe; Baron de Gleichen, and Madame de Genlis, all of whom mentioned Saint-Germain's experiments in their letters and memoirs.'

'Then that also changed,' Ingrid said, as if she hadn't heard him, 'and became another place, then another, and eventually I saw Saint-Germain – stood beside him, in fact

– in another laboratory in Amsterdam – I don't know how, but I just *knew* it was Amsterdam – where he turned metal into gold; then, in what was clearly the court of Louis XV, having words with the King; then with Madame de Pompadour and other members of the French aristocracy; then playing the violin again, but this time in what I knew was the castle of Raudnitz in Bohemia, in the presence of an old gentleman, obviously Prince Ferdinand von Lobkowitz; then, unusually, in the dress of an Armenian and with a long beard, having lunch with a distinctly flamboyant gentleman in Tournay, France…'

'The flamboyant gentleman would have been Casanova,' Gerry explained helpfully. 'And the bearded goat *was*, according to Casanova's memoirs, the legendary Saint-Germain.'

Ingrid nodded, then sighed. 'All of these people and places materialized with a vividness, an almost *palpable* reality, which convinced me that I couldn't be dreaming… and then, when I tried to speak, but couldn't do so and became frightened, Saint-Germain smiled, as if understanding my fear… and I found myself back in bed in my room, staring at the opposite wall, watching the pulsating light being sucked back into it, and finally, thank God, disappearing completely, leaving everything normal.'

Falling silent, she kept driving, her brow furrowed in thought, concentrating on the road as they passed industrial buildings, many churches with stained-glass windows, and modern houses that were already lit up to combat the premature darkness brought in by the storm.
‘Jesus,’ Gerry said, shifting restlessly on his seat, ‘this is getting to be a really weird experience. Saint-Germain and his partner seem to be able to materialize at will – anywhere, any time. And *we’re* trying to find *him*!’
‘You said it yourself, Gerry: he *wants* us to find him. He’s leading us to him – or leading us *somewhere*, at least. Only God knows where or why.’
‘I’m growing paranoid,’ Gerry said. ‘I can’t help it – I just am. On the one hand, we’re being hounded and harried by your dad, who initially wanted to get you back – and with his international network of communications would have no trouble in catching you. But clearly he’s decided to have us just followed instead – *only* followed, at least until it suits him.’
‘And right now he’s thinking we might lead him to the Tuaoi Stone.’
‘Yeah, Ingrid. Right on.’
‘And on the other hand?’
‘On the other hand, my angel, we’re being followed and maybe *protected* by another kind of agency altogether
– a seemingly supernatural agency that doesn’t need modern communications to keep track of our movements. I don’t know if that’s quite true. I mean, I might be imagining it. But I’m starting to believe that it *is* true, and now I’d just like some proof.’
‘Quantum mechanics,’ Ingrid said, speaking softly, to herself. ‘Think of Saint-Germain as an electron, here, there and everywhere, past, present and future all at once… And now we need proof.’
She slowed down, stopped the car and looked across the dark, lamplit street.
‘There’s the library, Gerry.’
The lights of the building were beaming out into the late-afternoon darkness, illuminating the pavement, slanting lines of silvery rain, and the debris that was being blown along the street by the fierce, howling wind.
‘So,’ Ingrid said, turning off the ignition, ‘are you all set to run?’
‘Sure, Ingrid, let’s do it.’
Simultaneously, they got out of the car, slammed their respective doors, then ran through the teeming rain and rushing wind into the warmth of the building. Gerry glanced around the lobby, briefly dazzled by its brightness,

taking comfort from the surf-like murmur of whispered conversations, then, feeling instantly at home with the many shelves of books, took hold of Ingrid's hand and led her briskly to the nearest librarian, a middle-aged woman in a severe black dress, with her auburn hair pinned up, blinking through brown-framed spectacles.

'Okay,' Gerry said. 'Ask her.'

Speaking fluent French, Ingrid soon managed to find, with the female librarian's help, the male clerk in charge of the Saint-Germain document. Waiting for the rare text to be brought to them in the reference room, Gerry wiped the rain from Ingrid's face with his handkerchief, kissed his fingers and pressed them to her lips, then held her hand. He said nothing to her and she likewise was silent until the single page of text was brought to them and left on their desk, when she read softly to him.

The text was frequently illegible and often hopelessly obscure, but Gerry's ears pricked up when Ingrid read out:

'*We moved through space at a speed that can be compared with nothing but itself… Within a fraction of a second the plains below us were out of sight, and the Earth had become a faint nebula. I was carried up, and I travelled through the empyrean for an incalculable time at an immeasurable height. Heavenly bodies revolved. And worlds vanished below me…*'

Gerry felt the hairs standing up on the back of his neck, as if a ghost had sat on his shoulder and thrown its mantle about him. He took a deep breath, trying to choke back his excitement, and looked into Ingrid's studious, bespectacled eyes.

'Jesus,' he whispered. 'He wrote *that* in the eighteenth century?'

'Yes,' Ingrid replied. 'And that's exactly what *I* experienced when that weird light filled my room. I felt as if I was travelling through space, maybe through time, before coming back to Earth, in another time… and another place.'

'Is that what Saint-Germain is doing?' Gerry said. 'I think it is. It *must* be!'

After glancing furtively at the librarian, to check that she wasn't watching him from her position at the far side of the reference room, he furtively withdrew a small notebook and pencil from his jacket pocket and hurriedly copied the quotation into it. Then he put the notebook and pencil back into his pocket.

'Got it!' he whispered triumphantly.

At that precise moment, as if to confirm what he was saying, there was a faint bass humming sound, a sensation of growing pressure, and the shelves of the reference room visibly shook, as if in an earthquake. The bass humming sound grew louder. All the lights in the room went out. Someone screamed and then the humming sound ceased and the room's shaking stopped.
'Oh, my God!' Ingrid softly exclaimed.
Gerry grabbed her hand and stood up, preparing to run, but the lights were still off, the room was in pitch darkness
– and then, even as more people screamed and bumped into one another, there was a bizarre rushing sound, like air being pumped from a hosepipe, and then another kind of light, brilliant, striated, poured into the front lobby from outside and temporarily blinded him.
He cursed, held onto Ingrid, started forward again; but then the light outside vanished, plunging the library back into darkness; the bass humming returned and the bookshelves shook again; then the noise rose on high, abruptly cut out, and the lights on the walls came back on as the bookshelves stopped shaking.
Ignoring the frightened moans and sobbing all around him, Gerry glanced down at the desk, saw immediately that the Saint-Germain document was missing, and looked elsewhere for it.
The document could not be found. When Gerry enquired, the male librarian insisted he hadn't taken it. He stared at Gerry, startled, opened his mouth to say something – probably to accuse Gerry of stealing the precious document – but Gerry quickly turned away, took hold of Ingrid's arm and hurried from the library, to see what was outside.
The rain was still pouring down and there was nothing unusual to be seen.
'Shit!' he said in frustration. 'We've missed them again! And now the Saint-Germain document is gone, so we'd better get out of here before that librarian sends someone after us. Come on, Ingrid, let's go!'
He rushed with her to the car and stood patiently in the rain while she fumbled with her keys, opened her door and slid in, then leaned over to open his door. He slipped into his seat, saw something stuck to the windscreen, behind the windscreen wiper, assumed it was a parking ticket, so cursed and went back outside to remove it. He was just about to throw it away when he saw what it was.
It was a neatly folded note, one half of it visible, handwritten on fine, antique

paper, now soaked and soggy and just about legible, the writing flamboyant, slightly archaic, and strikingly similar to the writing on the card attached to the tiny swastika they had found in his hotel room in Eckernforde.
After getting back into the car and closing the door firmly, he unfolded the note and read aloud from it.
'*Think only of the individual as being but one of many; consider the legend of Faust and know it to be true…*' Signed, '*Saint-Germain*'.
He caught Ingrid's glance, her ever widening gaze, then he stared all around the car, saw nothing but rainswept buildings, then looked up at the dark evening sky and saw a pulsating white light.
It was very high up, disc-shaped, dime-sized, but it moved from east to west, stopped briefly in mid-air, then abruptly ascended toward the stars and eventually blinked out.
He studied the sky a long time, seeing nothing but black clouds, then found himself shivering uncontrollably as he reached out to Ingrid.
'That's it,' he said. 'That's my proof. Now let's go back to England.'
Ingrid drove on to Calais.

Chapter Thirteen

After his unpleasant time in the bleak wastelands of Eastern Europe, Zweig was delighted to be back on his luxury cruiser in the Mediterranean, lying on a sunbed on the upper deck with his fleet spread out impressively around him and Elena supine beside him. She was wearing sunglasses, her long blonde hair was clipped up, her bikini was practically invisible, and her belly, unlike his, was as flat and smooth as a skating rink.

He glanced sideways at her, thought of taking her down below, but decided to wait for Hans to deliver his report. The helicopter had landed a couple of minutes ago, and he knew that Hans would be making his way to him this very minute, nervously wiping sweat from his forehead. Zweig liked it that way. Obedience always came through fear. He had learned that in the Fatherland during the war and had never forgotten it.

Closing his eyes again, he concentrated on the sunlight, feeling it on his face, on his too-flabby body, and silently cursed that he had not yet learned the

secret of eternal youth. He had tried everything on the market, every capsule, every enema, every kind of injection, but now accepted that only Saint-Germain's secrets could return him to good health.

He was, in fact, beginning to think of the elusive SaintGermain as a personal enemy, a formidable foe, a creature of magic, mystery and menace, almost beyond credibility. Zweig believed in the supernatural, in the power of unseen forces, knowing full well that the Third Reich of Hitler, Himmler and Rosenberg had sprung from the sulphurous smoke of a belief in the occult. Yes, he believed it – and belief could conquer all – and he knew that if he wanted it badly enough, he would eventually find Saint-Germain. And in doing so, also find the Tuaoi Stone and the powers it would give him.

'Herr Zweig?'

Opening his eyes to squint up into the sunlight, he saw the silhouetted figures of Hans and two much larger men, the latter holding gaberdines over their arms. Seeing them, he sat upright, feeling a twinge of excitement, then removed his sunglasses and told the steward to bring him a fruit juice. He did not offer any kind of drink to the three sweating men.

'Your men don't look happy,' he said to Hans. 'Can I take it they failed us?'
'Herr Zweig – ' one of the men began, but Zweig instantly silenced him by snapping his fingers and interjecting with, 'Shut up and speak only when spoken to. Now, Hans, please elucidate.'
The Filipino steward brought him his fruit juice and he sipped gratefully at it, listening to the exhausted and sweating Hans giving his report while the two hoodlums, also sweating, but with nervousness, restlessly shuffled their feet.
'As requested,' Hans reported, 'I had Ingrid and the American followed to Eckernforde, in West Germany, where they visited a certain Klaus Schiller. Shortly after they left Schiller's house, my men – these two – also paid them a visit to ascertain exactly what he had told our young friends.'
'And?'
Hans was about to respond when Elena yawned loudly, uncoiled as languidly as a cat, rolled onto her belly, then arched her oil-smeared, gleaming spine as she raised herself onto her knees. The two hired hoodlums, sweating even

more profusely, tried to keep their eyes off her.
‘God,’ she said, yawning, looking the hoodlums up and down as if taking their measure, ‘this heat puts me to sleep.’
‘Then go below and sleep,’ Zweig said impatiently. ‘I’ll join you later.’
‘Yeah,’ she responded, standing upright and stretching, her breasts bulging out of her skimpy bikini-top, her long legs and flat belly slick with oil, ‘I think I’ll do that. I hate business anyway.’
Rolling her hips like a disco-dancer, luscious buttocks trembling teasingly, she sauntered across the deck, ducked low, giving a good view of her backside, and disappeared through the hatchway. The two hoodlums, still trying hard not to look, were both visibly moved.
Zweig, taking note of their discomfort, was faintly amused.
‘And so,’ he said, returning his steely gaze to Hans, ‘these men were extracting information from Schiller. What did he tell them?’
‘He told them,’ Hans replied, ‘that Ingrid and the American had asked him a lot of questions about the Comte de Saint-Germain, were particularly interested in his origins, and said that when they left Schiller’s house they were going to check the famed Saint-Germain tombstone in the nearby churchyard. Schiller, who claims to be a descendent of Prince Charles, the Landgrave of HesseCassel – the man with whom Saint-Germain was living when his death was reported – told them that SaintGermain had *not* died at that time; and also that the SaintGermain of whom we speak is a magical adept, an immortal, a possible protector of the so-called Philosopher’s Stone – ’
‘The Lodestone, or Tuaoi Stone.’
‘Correct – and was almost certainly, in a previous incarnation, one Johann Valentin Andraea, author of the first three books on the original Rosicrucians, more widely known as Christian Rosenkreuz, the founder of that highly mysterious Order.’
‘I knew it!’ Zweig exclaimed, unable to stop himself, suddenly picked up on a wave of excitement that made him feel almost youthful. ‘Damn it, I *knew* it! Himmler himself believed that the Lodestone originated in the Fatherland – and what Schiller said merely confirms it.’
‘I’m not sure that I – ’
Scarcely able to contain his excitement, Zweig continued: ‘Don’t you understand? It’s widely believed that the Rosicrucians, being a secret

brotherhood of alchemists, had discovered the elixir of eternal life – the compound of the Philosopher's Stone, less widely known as the Tuaoi Stone – and now have confirmation that the Rosicrucians, therefore the Hermetic secret, originated in the original Fatherland – sixteenth-century Germany – just as Himmler, God rest his soul, had always insisted was the case. So the Lodestone belongs to the Reich. We were *destined* to have it!'

Even more excited, feeling almost orgasmic, he smacked a fist into the palm of his hand, glanced beyond the safety railing at the fleet of cruisers surrounding him, then took note of the fact that Hans was trying, unsuccessfully, to conceal his scepticism.

Feeling that cold water had been splashed on his face, he studied Hans intently and saw that he was too soft for his own good. Hans was bright and obedient, knew his place, worked hard, but clearly he lacked certain manly traits and needed toughening up.

'You do not agree, Hans?'

'No – I mean, *yes*!'

'Good, my friend. *Sehr gut*! The Lodestone belongs to Germany and we are going to find it – and Saint-Germain, who was once Christian Rosenkreuz, will eventually lead us to it.'

'Yes, Herr Zweig. Of course.'

Zweig nodded with satisfaction, then turned to the two hoodlums. 'So,' he said, speaking directly to the biggest one, 'what happened then?'

Confused, the big hoodlum looked at the smaller one, then coughed into his clenched fist. '*What*?' he asked stupidly.

Zweig sighed with exasperation. 'When this Schiller creature, this disgusting little sodomite, had finished telling you what he knew.'

The big hoodlum frowned, deep in thought, and eventually prepared to speak, but the smaller man prevented him from doing so by stepping forward and offering a cocky grin.

'We handcuffed him to a hot griddle,' he said, 'and then turned the heat up.'

Zweig chuckled at that one. '*Very* good,' he said. 'The old-fashioned methods are always the best, so I'm glad you still use them. Excellent… Then?'

'Following your instructions,' the smaller hoodlum replied, 'we didn't bother your daughter or the American, but kept tabs on the hotel where they were sleeping.' 'They were sleeping together?'

‘No. Reportedly they had separate rooms.’
‘That virgin,’ Zweig said, feeling nothing but contempt, recalling that his daughter was like her dead mother, a frigid bitch who, shortly after his marriage to her, had gone right off sex. That was one of his reasons for killing her: he hadn’t been able to take her rejection, particularly when she said he was a pervert whose sexual inclinations made her feel ill. However, he knew that wasn’t the real reason, that the real reason was her frigidity, and so he had slipped some arsenic into her normal medication and got rid of her that way. And Ingrid, his daughter, was every bit as frigid as her mother – and, like her, despised him… ‘And that Yank’s just the same,’ he added maliciously. ‘So, please continue.’
Relieved and pleased to continue, the smaller hoodlum smirked and said, ‘Your daughter and the American watched the Schiller house burning down and were observed speaking to some of the locals – doubtless asking what had caused the fire – and then they retired to their hotel for the night. Schiller had told us that he’d encouraged them to visit the library of Troyes, in France, where, he said, they would find confirmation for the existence of the eighteenth-century Saint-Germain. So, the following day, they left Eckernforde and drove through Kiel and Hamburg, stopped for lunch near Hanover, then drove on to Frankfurt, where they spent another night, and…’
Here, the smaller hoodlum stopped smirking and glanced nervously at his bigger partner, as if not entirely sure that he should say more.
‘Don’t hide anything from me,’ Zweig warned him. ‘It would not be advisable.’
‘Of course not,’ the smaller hoodlum said. ‘It’s just that it’s a little… Well…’ He shrugged. ‘*Unbelievable*.’ ‘No matter. Continue.’
The smaller hoodlum sighed. ‘We didn’t book into the hotel, but instead parked our car close to it and took turns at keeping an eye on it throughout the evening and early morning hours. Neither of them emerged from the hotel, but shortly after midnight, when both of us were awake, we saw what we could only describe as a…’
‘Yes? Yes?’
The smaller hoodlum shrugged. ‘A sort of… *flying saucer*,’ he said nervously. ‘An extremely large, discshaped light that first took shape in the low clouds, then descended vertically, like a helicopter, but with no noise at all, then hovered right over the roof of the hotel and remained there for some

time. It glowed and pulsated. It had a dark inner core. It just hovered impossibly in mid-air, making no sound at all.'
'No,' the bigger hoodlum corrected him, looking slightly embarrassed. 'It *did* make a sound. You could hardly hear it, but there was definitely a sound – an almost imperceptible bass humming that sometimes even made our car shake.'
'Yes,' the smaller hoodlum said. 'I forgot. That's absolutely correct.'
'And then?' Zweig asked impatiently.
'It remained there for about an hour, scaring both of us, I'll admit, then it ascended as quietly as it had descended and disappeared through the clouds.'
'Anything else?'
'No.'
'And the next morning?'
'Your daughter and her American friend drove on to Troyes where, in the middle of a heavy rainstorm, we…' He trailed off nervously, then reluctantly concluded, 'We lost them.'
Zweig felt the rage churning up, but breathed deeply, controlling himself.
'*You lost them*?' he hissed.
'It wasn't our fault!' the bigger man insisted.
'Shut up!' his partner snapped. 'It was the UFO,' he said, looking hopefully at Zweig. 'That saucer-shaped light. That apparition… whatever… It came back and harassed us.'
'I am losing my patience,' Zweig said. 'You'd better make this believable.'
Looking even more uncomfortable, the smaller hoodlum continued: 'Your daughter and her American were obviously heading for Troyes and we were following them at a fairly safe distance through a heavy rainstorm when that *thing*, that brightly glowing saucer-shaped light, materialized out of nowhere, tailed us for a brief time, then, just on the outskirts of Troyes, almost came down on top of us.'
'Not on *top* of us,' his big partner corrected him. 'It seemed to be all around us. It looked solid in a way – it had that dark inner core – but it *couldn't* have been solid, because it was suddenly all around us, above us, below us, and we couldn't see a damned thing – we were blinded by the dazzling light – and the next thing we knew, our car was in a ditch and we were both regaining consciousness, after having blacked out, wondering what the hell had happened to us.'

‘Right,’ the smaller hoodlum added. ‘And when we looked through the smashed windscreen, at the road we’d just been on, we saw what appeared to be the same UFO, that saucer-shaped, pulsating *light*, rapidly shrinking in size as it shot away through the storm in the direction of Troyes.’
‘Obviously following my daughter and the American,’ Zweig said helpfully.
‘Yeah,’ the smaller hoodlum said, sounding relieved. ‘We think that’s what it did. I mean, we had to leave our smashed car in the ditch and hitch a lift into Troyes, arriving there pretty late in the evening. But once there, we went straight to the library where we found a lot of people gathered together in the street outside the building, all talking excitedly and gazing up at the sky. When we asked a couple what they were looking for, they said a UFO had been seen, that it had made the whole building shake, that it had made all the lights go out, and that it had briefly illuminated the whole library before disappearing.’
‘My daughter and the American?’
The smaller hoodlum shrugged for the last time. ‘They were gone by the time we got there. So we hired another car and drove on to Calais, but they weren’t on the ferry that *we* caught. Obviously they’re both back in London… and that’s all we can tell you for now.’
‘And that’s quite enough,’ Zweig retorted. ‘You both know too much now.’
He enjoyed the startled glances that passed instantly between them, was thrilled when they stared disbelievingly at him, their eyes filled with fear.
‘*What*?’ the bigger hoodlum asked.
‘Wait a *minute*!’ the smaller one exclaimed, taking a step back towards the safety railing, which is just where Zweig wanted him.
‘Open the gate, Hans,’ he said. ‘It’s time these hooligans left us.’
Hans stood there for a moment, clearly shocked, then went reluctantly to the safety railing behind the smaller hoodlum. He opened the gate that normally led to the gangplank, then stepped back and turned to the front again, leaving an empty space high above the trembling blue sea.
Both hoodlums glanced back over their shoulders, then stared blindly around them.
‘*Wait* a minute!’ the smaller one pleaded, raising his hands imploringly in the air. ‘It wasn’t *our* fault that we finally lost them. It was that *UFO*, for chrissakes!’
Zweig, having fun, didn’t reply, but merely turned to his Filipino steward and

said, ‘Bring me the Luger.’
‘I don’t think – ’ Hans began.
‘Please don’t think,’ Zweig retorted. ‘These two halfwits failed to complete what they were tasked with – and besides, they now know too much.’ He took the Luger pistol from the Filipino steward, who had withdrawn it from a holster hidden under his immaculate white jacket, then aimed it at the smaller hoodlum as he backed fearfully to the open gate. ‘The sea or a bullet in the head,’ Zweig told him. ‘The choice is all yours.’
‘Jesus Christ, this is – .’
Zweig fired the Luger, felt the recoil, heard the shot, saw a ribbon of snot and blood shooting out of the hoodlum’s head as he jerked backwards and disappeared over the side, making no sound of protest. Then Zweig calmly aimed at the bigger hoodlum, saying, ‘Step over there, please.’
The big hoodlum waved his hands in feeble protest, but did as he was told, having no choice in the matter. He stood in front of the space where the gate had been opened, framed by the radiant blue sky and iridescent sea.
‘*Please*, Herr Zweig! *Please don’t*!’
Zweig raised the Luger, took aim and then paused, taking note of the look of revulsion on Hans’ face, his visible trembling. *Oh*, *yes*, he thought, *he’s weak. He’s frightened of the real world. He needs a lesson in the manly virtues and now is the time for it*… The thought made him smile, wave his free hand, call Hans to him. When Hans reached him, he gave him the Luger and said, ‘Either persuade him to jump or help him along.’
‘There are *sharks* down there,’ Hans said.
‘I know. That’s the whole idea, Hans.’
Hans was clearly in a state of shock, his eyes widening with disbelief, but Zweig deliberately kept his own stare hard, which soon did the trick. Hans licked the sweat around his lips, controlled himself, turned to the hoodlum, then raised the pistol and took aim.
The hoodlum put his hands up entreatingly.
‘*Please*, Hans!’ he croaked. ‘*Don’t*!’
Hans pressed the trigger. The firing weapon jerked his wrist up. The big hoodlum was punched backwards, his hands flapping at his chest, blood spurting from between his fingers as he disappeared over the side and splashed into the shark-infested sea below.
Hans stood there, visibly shaking, tears springing to his eyes, still holding up

the Luger, aiming blindly at the sky, paralysed until Zweig, feeling almost paternal, went to him, put an arm around his shoulders, gently removed the pistol from his trembling fingers and said, ‘Good boy. *Good* boy. You will soon be a man, *ja*?’
Hans didn’t reply.

Chapter Fourteen

‘No,’ Gerry insisted as Ingrid drove the car at a snail’s pace through the peak-hour traffic of Tottenham Court Road, in London’s West End, heading for her hotel in Bloomsbury. ‘I absolutely insist. It’s now becoming too dangerous, so we have to stick together, which means *living* together, either in your place or in mine, and I certainly believe we’ll be safer in your hotel, sharing the same room. That’s all there is to it.’
‘My room’s too small,’ Ingrid responded, feeling

cowardly, her cheeks burning, despising herself for her reluctance to accept what she secretly, helplessly, wanted.

‘Then we’ll simply move into a double room,’ Gerry responded. ‘It’s as easy as that.’
‘I’d be too embarrassed to ask,’ Ingrid said, speaking the truth, though ashamed of its nature.
‘Then *I’ll* do it, Ingrid. I’ll hide you in the lounge where the desk clerk can’t see you, and I’ll sign both of us into a bigger room, maybe even a suite.’
‘You don’t have to do that.’
His hand dropped onto her knee, squeezed it, moved up farther, and although it made her feel good, it also disturbed her. She knew he wasn’t like her father, that not everyone was, but she couldn’t ignore the fear that lanced through her when she thought of reality. Sooner or later it would come to that, otherwise it would be unnatural, and although she actually *wanted* it to come to that, she didn’t believe she could deal with it.
‘Gee,’ Gerry said, ‘you have a really nice thigh. It’s so *soft*, so…’
‘Please don’t,’ she said. ‘I can’t drive properly if you do that. Now tell me again.’
‘What?’

‘I said, tell me again. You were explaining what you thought that quotation meant, so tell me again.’
‘Oh,’ he said, sounding disappointed. ‘*That*… Well, yeah, right…’
He removed his hand from her thigh, as if hurt by her indifference, so she reached out, took hold of it and planted it back where it had been.
‘I like it,’ she said. ‘I do! *Honestly*! But I have to know certain things.’
He sighed. ‘Okay. I’ll tell you again. The note said: *Think only of the individual as being but one of many; contemplate the legend of Faust and know it to be true*… Right?’
‘Right.’
‘Well, I don’t think it was a quotation, but it *was* some kind of message, and obviously it refers to Faust – not the opera, but the Faust famed in legend and literature as a man who sold his soul to the devil in exchange for knowledge and power.’
‘I got that much,’ she felt obliged to tell him.
‘Okay,’ he said. ‘Now the fictional and mythical Faust was actually based on a real-life person, one Dr. Georg Faust, who was born, if my memory serves me well, in Knittlingen, Germany, around 1480, became famous as a sodomite, magician and mesmerist, and was commonly thought to have concluded a pact with the devil, before dying in Staufin, near Freiburbg, in 1540 or early the following year. Assuming, then, that the note was left by our Saint-Germain or one of his minions – and accepting that what we’ve already learned about him is true – what the note seems to be telling us is that the mysterious Comte de Saint-Germain is, was, amongst other personas, the original, possibly diabolical Faust, who reportedly died 169 years before the death of the eighteenth-century Count Saint-Germain.’
‘Of course,’ Ingrid said, now feeling excited, swept away by the unravelling mystery. ‘The historical Faust died 169 years before the *recorded* death of Saint-Germain. And, if the *recorded* date of Saint-Germain’s death in Eckernforde is correct, it makes him 169 years old when he died.’
‘Right,’ Gerry responded. ‘It now seems unlikely that he actually died at that time, but that’s the date he *chose* to supposedly die, at least as far as the mortal world is concerned. Ergo, Saint-Germain was supposed to have died at the age of 169, exactly 169 years after Faust died.’
‘A way of telling us that he and Faust *were* one and the same.’
‘Right!’

‘So he might be telling us that he sold his soul to the devil?’
‘Or that he *is* the devil.’
‘Or simply antagonistic to us.’
‘He hasn’t harmed us yet,’ Gerry said. ‘And he certainly could have. No, what I think he’s trying to tell us is, simply, that like Faust he’s learned the secret of immortality and is, in fact, a man of many lives, possibly spanning the centuries…’
Ingrid felt herself unable to look directly at the truth and its awesome, terrifying possibilities. She felt Gerry’s hand on her thigh, sliding lightly, lovingly up and down it, and took a great deal of comfort from it… even though she feared *that* as well.
‘So you now believe,’ she said, not looking at him, concentrating on the dense traffic, ‘that our Saint-Germain *is* a magical being, and possibly immortal.’
‘I do, Ingrid. All the facts point in that direction. Clearly he’s some kind of magical adept – maybe a member of a secret society of such – and the original Rosicrucians, of which Saint-Germain as Christian Rosenkreuz was one, were part of that very ancient band. All alchemists. Or mystics.’
‘God,’ she heard herself saying, though she hadn’t actually planned on replying. ‘And the Hermetic secret, or Philosopher’s Stone, is in fact the Lodestone, or Tuaoi Stone, which was once hidden as the tip of the Great Pyramid.’
‘And somewhere else before, Ducks.’
He had said it to amuse her and she couldn’t help smiling, but her lingering fear returned soon enough, like a shroud or dark cloud.
‘So we’re trying to find the Lodestone,’ she said, ‘which means finding Saint-Germain… and he seems to be encouraging us to do so, though he won’t simply, openly approach us. It doesn’t make sense.’
Gerry sighed again. ‘No,’ he said, ‘it doesn’t *seem* to make sense… but he must have his reasons.’
Thankfully, Ingrid was suddenly able to turn off the choked main road and into the relative tranquillity of the Bloomsbury side street that led to the hotel in Tavistock Square, where she parked illegally, since all the meters were taken. They locked the car, removed their holdalls from the boot and then entered the hotel. But once inside, when they approached the male desk-clerk in Reception, Ingrid could not stop herself from blushing.

The desk-clerk, slim, wearing a pinstripe suit, hair cropped close to his head, stared at them with a glacial expression and said, ‘Yes?’
‘I have a room here,’ Ingrid began, practically stuttering, ‘and I…’
‘Of course, Miss Smith. Room 413.’
‘Yes,’ Ingrid said promptly, having forgotten that she had originally signed in under a pseudonym and relieved to have been reminded of it, ‘and I…’
When the knowing clerk glanced at Gerry with a sceptically raised right eyebrow, Ingrid simply couldn’t complete her sentence.
‘You would like your room key, Miss… *Smith*?’
‘Well, actually…’
‘I’m *Mister* Smith,’ Gerry said, causing her even more embarrassment, ‘and now that I’ve arrived, my wife and I would like to move into a bigger room, with two single beds.’
‘Two… *single* beds, Mr Smith?’
‘Yes. My wife and I only share a bed when making love, so please make it two single beds.’
The desk-clerk’s glacial superiority crumbled into a very English kind of embarrassment and confusion. He coughed to clear his throat and scanned the register book too intently. Eventually, trying to pull himself together, he turned away, removed a door-key from its hook and handed it rather formally to Gerry.
‘Room 325, sir. Very nice. With a view of the square.’
‘Gee,’ Gerry said, ‘that’s terrific. Have a good day, pal.’
The hotel had no porter, so Gerry had to carry the holdalls and Ingrid followed him to the lift, feeling as embarrassed as the desk-clerk had looked. When the door closed behind her and the lift started its ascent, she heaved a sigh of relief.
‘What’s the matter?’ Gerry asked her.
‘I don’t know how I’m going to pass the Reception as long as that desk-clerk is there.’
‘Don’t worry, he won’t even give you a glance. That English wimp is more embarrassed than you are, so he’ll just look right through you.’
‘God, Gerry, you’re shameless, you really are.’
‘I wish I was,’ he said.
Aware that he was staring steadily at her, she lowered her gaze and studied her own feet until the lift came to a stop at the third floor. When the door

opened, she held the button until Gerry had hawked the holdalls out, then followed him along the corridor to their new room. He put the holdalls down, grinned at her, turned the key in the lock and motioned her inside.
'I'd carry you across the threshold,' he said, 'but these bags are killing me.'
He was trying to amuse her, but she was too tense to smile and went past him, into the spacious room, feeling highly self-conscious. She saw the two single beds, a chest of drawers and wardrobe, and was gazing at the bathroom when she heard the door closing behind her. Gerry brushed past her, huffing and puffing melodramatically, then placed the holdalls on the slotted racks beside the wardrobe and turned back to face her.
'Well,' he said, grinning broadly but uneasily, 'here we are – man and wife.'
Having never shared a room with anyone before, Ingrid felt trapped. Looking at the bathroom, she simply couldn't imagine using it, knowing that as she attended to her ablutions Gerry would be sitting in this room, with just that thin wall separating them. Then she looked at the two beds. Her mind went blank when she did so. She could scarcely focus on Gerry, but she sensed him staring at her, and though wanting to hold him and be held *by* him, the very thought of doing anything more than that made her shrink within herself. With clothes on? *Without* clothes… How would she get undressed? Would *he* do it for her? Or would she have to do it herself, and if so, where and when? *In the bathroom*? Ridiculous! And if in there, she would eventually have to emerge… Should she be naked or wearing a nightdress? And whatever… what then?
Oh, God, she thought. *I wish he would… No*!*… Yes, yes, I* do *love him and want him to…*
'Oh, Gerry,' she heard someone say plaintively, like a lost child – and then, as she realised it was herself, he made a lunge for her.
She fell back against the wall – or was forced back by his weight – and automatically closed her eyes when he kissed her and groaned at the same time. She was shocked, excited, helpless, confused, aware of the weight and warmth of him, hearing only his passionate groaning. A wave of emotion caught her, picked her up, swept her away, but then it smashed her on the rocks of her buried fears to leave her breathless and dizzy.
She had a vision of her father, saw his whores, recalled her dreams; felt a hand on her breast, Gerry's hand, and thought of other hands, elsewhere… No, it wasn't nice. It was base and animalistic. She saw Elena rubbing oil into

her father's bulging belly, and recalled the many other humiliations going back to her childhood.
God, yes, she wanted Gerry, and her body responded to him; but she heard a cry of protest, her own, as she slapped wildly at him and pushed him away and then turned frantically to the side, her heart pounding, lungs aching.
'No, Gerry! *Please*! I can't help it! I can't! *I just can't*!'
'Oh, Christ!' he groaned softly.
She reached out blindly to him, felt her fingertips on his face, touched his lips, the tears on his cheeks, then had to choke back her own tears. None of this was real. It was like a bad dream. She was picked up on a tide of love and grief and swept to the room door. She opened it and fled, only dimly aware of what she was doing, heard him calling her back, but took the stairs and hurried down to the bar. He met her before she got there – he must have taken the lift – and grabbed her by the shoulders and shook her, saying, 'I'm sorry! *I'm sorry*!' Helpless, she burst into tears and let him embrace her. He hugged her and kissed the top of her head and then wiped her eyes dry. After that, he led her into the bar, sat her down in a corner, ordered two drinks from the barman and returned to the table.
'Here,' he said, putting a glass down on the table. 'I feel as bad as you do. Do you *like* gin and tonic?'
'Yes.'
'Good for shattered nerves.'
She smiled and calmed down. He reached across the table, held her hand and looked steadily at her.
'I'm no good at this,' he said. 'I don't know how to start. God, I love you and want you, but I'm shy about certain things, and *you're* not exactly the bold type, which doesn't help me a bit. Jesus, I adore you. You're the nicest thing on Earth. I want to hold you and kiss you and… *you* know… but, Jesus, I'm hopeless. I mean, I know you have your problems. Your dad's made you that way. I know and I try to understand, but shit, it's so *heavy*. You know what I mean? I'm probably as scared as you are. I lunged at you because I thought the time was right and I didn't know what else to do. But we have to share that room, Ingrid. We *have* to share it. So let's try it again.'
'I can't even get undressed there,' she said. 'I'll just feel too self-conscious.'
'Okay,' he said. 'I understand. I mean, I know you're inhibited. So when you want to get undressed, tell me how long it'll take and I'll come down here to

the bar and go back up when you're safely in bed.'
'I can't even use the toilet.'
He waved his hands in dismissal. 'Same thing. Absolutely. When you want to use the bathroom I'll come down and wait here for a decent period.'
'Alright, then.'
'Good,' he said. 'It's agreed.'
He squeezed her hand and smiled at her, making her feel better, so she finished her gin and tonic, drinking it too quickly, and walked back to the lift, feeling drunk. Leaning against him in the lift, resting her head against his shoulder, she felt her fear falling away and melting into his warmth. He slid his arm around her, resting one hand on her hip, tugged her to him, squeezing her a little, and then stroked her hair. She felt secure and at peace, at last protected by love, and when they left the lift and returned to their room, she knew their love would survive this.
As soon as they entered the room, they knew that someone had been there.
'Shit!' Gerry exclaimed.
Spread out on the bed, in the rough shape of a pentagram, were a coiled rope, a lotus flower, and three postcards.
Gerry pressed Ingrid back against the door. He indicated silently that she shouldn't move. While she stood there, he checked the bathroom, reappeared, shrugged his shoulders. He rang through to Reception and asked if anyone had been in the room; when he shook his head from side to side, Ingrid knew the desk-clerk had said 'No' and probably meant it. Then Gerry went to the bed. He picked up the coiled rope. While he did so, Ingrid picked up the lotus flower and inhaled its fresh aroma.
Gerry studied the three postcards. He passed them to her in silence. The first showed the Temple of Diana at Ephesus in Turkey; the second was a reproduction of Sidney Barclay's 1875 wood engraving of the Colossus of Rhodes, once located in the harbour of Rhodes Island in Greece; and the third was a photograph of the ruined statue of Zeus at ancient Olympus, now Olympia, in the Peloponnese.
'Saint-Germain,' Gerry said. 'He's been here. And now the bastard's leading us by the nose. He's tell us where to go.'
Thinking of Saint-Germain and his mysterious partner, one or the other of whom had been in this very room just a few minutes ago, Ingrid slipped back into a fear that quickened her breathing.

‘How did he, or they, get in here?’ she asked.
Gerry shook his head from side to side in bewilderment. ‘Picked the lock, or…’
When he failed to finish his sentence, but just stared questioningly at her, she recalled that night in Frankfurt, when Saint-Germain and his partner had materialized out of an unnatural, pulsating light. Then she recalled that same light beaming into the library of Troyes from outside, the message found on the windscreen of their rented car…
‘God,’ she whispered, ‘I don’t like this. I don’t like it at all.’
Gerry didn’t reply. He simply swung the coiled rope to and fro above the bed, and then, while Ingrid sniffed at the lotus flower, gazed at her with thoughtful eyes.
‘All these things are connected,’ he said distractedly, looking inward, as if remembering all the books he had read on ancient mythology. ‘A coiled rope is the ancient Egyptian symbol for one hundred. A lotus flower represents the ancient Egyptian 1,000.’
‘So?’ she asked when he stared questioningly at her.
By way of reply, he took the three postcards from her, spread them out in a fan, and asked, ‘What have these three locations got in common?’
Ingrid studied them for a moment, initially feeling baffled, then, with a childish flush of pride, finding the answer.
‘They’re three of the Seven Wonders of the World.’
‘And?’
‘They’re all located on landmasses that are joined by the Aegean Sea.’
‘Right,’ Gerry said, pleased. ‘And the Aegean Sea is the most likely location of the legendary Atlantis.’
‘What makes you think he’s referring to Atlantis?’ she asked, not too sure of what he was driving at. ‘He may simply be telling us to visit those three locations, two of which are in Greece, the third in Turkey.’
‘He *is* telling us to do that, Ingrid. But he’s also telling us to make that journey while keeping Atlantis in mind.’
‘I don’t see the connection.’
Gerry swung the coiled rope slowly in front of her, then placed a finger lightly on the lotus flower she was still holding.
‘The Atlantis myth is derived solely from Plato, who mentions it in two dialogues: the *Timaeus* and *Critias*. According to Plato, the ancient world

wasn’t devastated once, by a single great flood, but many times by different floods, though the greatest was the one that destroyed Atlantis, which, according to Plato, lay beyond the Pillars of Hercules – Gibraltar – and was as large as Libya and Asia put together. However, Plato insists that Atlantis consisted of many islands, rather than being a single continent – most likely the islands of the Aegean Sea.’

Ingrid sat on the edge of the nearest bed, crossed her shapely legs and stared up at him. Again, he dangled the coiled rope before her face, his eyes bright with excitement.

‘Are you with me so far?’ he asked.

‘Just about,’ she replied, smiling at him, ‘but don’t let that stop you.’

He sighed. ‘The most renowned attempt to solve the mystery of Atlantis was that of Professor A. G. Galanopoulos. His intriguing theory is that all the figures given in relation to Atlantis are too large, being based on a confusion between the Egyptian one hundred – a coiled rope – and 1,000, the symbol of which was the lotus flower. Now, it’s widely believed that Plato, in confusing the numerical symbols of ancient Egypt, multiplied the original figures for Atlantis by ten in all cases – in other words, the true size of the original Atlantis became ten times larger in Plato’s calculations. This made it impossible to locate it in the Aegean Sea. And he likewise multiplied the date of its destruction by ten, thereby making the date approximately 9,000 years before his own time. However, if all of the figures are based on the coiled rope, rather than on the lotus flower – in other words, *divided* by ten – Plato’s figures place Atlantis in an acceptable historical context, his description of the Royal City and its plains corresponding exactly to modern Crete, and the date of its destruction, instead of being 9,000 years before Plato’s time, becoming approximately 1,500 BC.’

‘What does that date have to do with the lost Atlantis?’

‘We don’t know what existed in that area 9,000 years ago, but we *do* know that Athens existed as a fortified town about 2,000 BC, and that in 1,600 BC there was a high level of civilization in nearby Crete. The sea between Greece and Crete is full of islands that were once part of Greece itself – and the most southerly of these islands is Santorini, which was once circular in shape and five or six miles in diameter. It *is* known that around 1,500 BC there was a tremendous explosion, probably volcanic, that ripped Santorini apart and turned it into little more than the remains of a gigantic crater. *Modern*

Santorini consists of three islets, all covered with pumice and volcanic rock. And since the explosion of 1,500 BC was three times as large as the eruption of Krakatoa in 1883, it must have produced a tidal wave of unprecedented size. That would certainly have destroyed any civilization existing in the Aegean Sea area. It would also account for the mysterious destruction of the Palaces of Knossos and Phaestus at about that time. So, if we accept that Plato confused the lotus flower and the coiled rope, or mistook one hundred for 1,000, we can take it that Professor Galanopoulos was correct in assuming that modern Crete is the site of the Royal City of ancient Atlantis, Santorini is the metropolis described by Plato, and the whole empire once extended over the many islands of the Aegean Sea, before being destroyed in 1,500 BC.'

'And that's what Saint-Germain is trying to tell us?'

'Right. He wants us to go to each of those three sites – and he also wants us to know that each of them once belonged to Atlantis. That's what he wants us to know and do, but don't ask me why.'

Ingrid felt that she was finally managing to gain control of her fear, but her confusion only grew deeper at what she was hearing. Gerry grinned at her, mischievously, reassuringly, and she knew, just by studying his eyes, just what he was planning.

'We're going to *Greece*?'

'Via Turkey,' he replied. 'We'll arrange it tomorrow.'

He grinned at her again, thus removing her from herself, letting her slip away from the fear and return to the sanctuary of love. She forgot about Saint-Germain, about her father and the Lodestone, and became aware only of Gerry and how close to her he was. God, she loved him and wanted to be touched by him, but could do little about it.

It was fear of a different kind.

She glanced at the two holdalls, returned her gaze to Gerry, noted his schoolboyish excitement and gave him a smile. She hoped the smile seemed natural, but in truth she still felt nervous, being tired and wanting to go to bed and sleep soundly for once. No matter what he had said, she still didn't know how to start, so she yawned and blinked melodramatically and murmured,

'God, I'm so tired. I really have to lie down.'

'Sure,' he said. 'You want a bath?'

'Yes, I feel pretty grubby.'

'Would forty minutes cover it?'

‘I think so.’
‘Then I’ll go back down to the bar.’
She felt idiotic, but couldn’t help herself, so just nodded agreement and murmured embarrassed thanks and watched him leave the room. When he had closed the door behind him, she stripped and opened her holdall, took her dressing gown and toiletry bag out of it and went into the bathroom. She thought about him while she had her bath, rubbing her naked skin with the soap, feeling hot and tingly all over, wanting to touch and be touched. Closing her eyes, she visualized him, sitting all alone in the bar, imagined what might happen if he walked in now and saw her naked. *I’m such a fool*, she thought. *I might as well be a nun*. Then she pulled the plug out, stood up and wrapped herself in the towel, listening, hoping the door would open and he would see her this way.
The door didn’t open. He was being a gentleman. Disappointed, relieved, yearning and ashamed, she dried herself, put on a short nightdress and slipped into the bed. Having already removed her spectacles, she tugged the blankets up to her chin and stared at the ceiling.
Gerry stayed out of the room for an hour, but it seemed like the whole night.
‘I stayed away a bit longer,’ he explained when he returned, ‘because I didn’t want you to get nervous about running late.’
‘I wasn’t nervous,’ she said, feeling foolish, the blankets still up to her chin, her cheeks burning brightly.
‘Can I get ready now?’
‘Of course.’
‘I’ll unpack and take my things into the bathroom. Just pretend I’m not here.’
‘Oh, Gerry,’ she said with a sigh.
Grinning, he opened his holdall, removed what he required, went into the bathroom, closed the door behind him and then ran the bath taps. She could hear him singing. He was doing it in the bath. It was a terrible rock ‘n’ roll song and his voice was perfectly tuneless. Luckily he was quick – she heard the water draining out. He gurgled and then went quiet and then he emerged again, wearing a Chinese dressing gown decorated with garishly painted dragons.
She closed her eyes and pretended to be sleeping as he slipped into the second bed.
‘Good night, Ingrid,’ he said.

‘Good night, Gerry,’ she replied without thinking. ‘Ah, ha!’ he said. ‘Fooled you!’
‘Fooled me? I wasn’t pretending to sleep!’
‘Yes, you were.’
‘No, I wasn’t!’
‘Good night, Ingrid.’
‘Good night.’
He switched the light off, plunging the room into darkness, and she lay there, keeping her eyes closed. She was tired but couldn’t sleep, first thinking of SaintGermain, of what Gerry had told her, then thinking of Gerry himself, lying there in the other bed. She heard him tossing and turning. That just made her toss and turn. She sighed and yearned for him, was fearful that he might come over, listened for him and imagined him coming and then slipped into fantasy. She felt his hands on her naked skin, on her belly and breasts, felt the hard heat of his body against her, almost tasted his lips. He was here and then there, in her bed, then in his own, and she wanted him and feared him and burned with shame and need, and then eventually didn’t know if she was dreaming or awake, but opened her eyes, after what seemed like an eternity, to the morning’s grey light.
Gerry was still in the other bed, sleeping soundly and snoring slightly. She stared sleepily at him, resenting his contentment, contemplating slipping in beside him and nuzzling against him. She trembled, trying to work up the courage, but she just couldn’t do it.

Chapter Fifteen

If Gerry had felt a muted confusion when in London, three weeks later, when he was sitting opposite Ingrid at an outside table of a *cafeneion* in the atrociously noisy Constitution Square in Athens, Greece, drinking *ouzo* while Ingrid had a *citron pressé*, he felt that he was either losing his mind or living a dream. What he had planned very carefully to be work and pleasure combined had become a bizarre, frightening journey into the unknown.

‘I still can’t believe it,’ he said to Ingrid. ‘I look back on the past three weeks and it’s all been a dream.’
‘It all *happened*,’ she insisted, reaching out to take hold of his hand, letting

him know that he really existed and she still cared for him. ‘I was there. We *both* saw it.’

Having another sip of *ouzo*, he wondered just *what* they had seen. Glancing around the noisy square with its hotels, travel agencies, cafés, orange trees and the hellish traffic crawling around the central fountain, he tried to reconstruct in his mind just what he and Ingrid had actually experienced. Determined to make a holiday out of this second trip financed involuntarily by the revolting Zweig, Gerry had flown with Ingrid to Istanbul, spent a few days there, then hired a car for the drive along the Aegean coast, by the rich, rolling countryside between the higher plateau and the sea, through names that had once lived for him only in mythology – Nicaea and Bursa and Troy – and finally through a surprisingly modern Izmar, then on to Ephesus. Once there, and standing beside Ingrid on the top step of the great horseshoe-shaped odeum and theatre, looking out over the solemnly impressive ruins of the Temple of Diana, or Artemis, he realized that apart from the hint that he and Ingrid should come here, Saint-Germain had failed to tell them what to look for. Consequently, for the rest of that afternoon, he and Ingrid had exhaustively explored the widespread ruins of the ancient Ionian Greek city, but failed to come across anything unexpected.

Determined not to give up, and recalling that the previous manifestations had occurred in darkness, he had insisted to Ingrid that they wait in the car until nightfall, when the ruins would be closed to tourists. Ingrid had agreed, and that evening, when darkness had fallen, they both got out of the car and started walking back to the ruins.

Everything became confused after that.

Gerry couldn’t be sure, but he was convinced that he had fallen into a trance-like condition, that a globe of dazzling, pulsating light had materialized gradually over the ruins of the ancient theatre; that the columns of the original Temple of Artemis, then the great Artemisium itself, had reappeared magically over the illuminated ruins; and that both Saint-Germain and his unnamed partner, both wearing Grecian robes decorated with reliefs of animals and bees, both with high-pillared priests’ headdresses, had emerged from that shimmering light, from the ghostly columns of the ancient temple, and smilingly observed him from the lower steps of the theatre, while Ingrid, seated beside him on those same steps, had slumped against him and then seemingly fallen asleep. He also had been affected, mesmerized by those two

apparitions, or ghosts, and then one of them, Saint-Germain, had approached him to place a hand on his shoulder.
‘You are doing well,’ Saint-Germain said. ‘Continue to do so. I have already given you the first number. There are only seven Wonders of the World. The second number is seven.’
Then Saint-Germain had squeezed his shoulder. That’s all he remembered. He had blacked out and awakened in the cold light of dawn, leaning against the still sleeping Ingrid in the vast, circular ruins of the Artemisium, thinking, *Seven*.
Why *seven*?
When he shook Ingrid awake she became frightened again, then insisted that they leave as soon as possible, that the ruins were possibly haunted, and that she had imagined, or experienced, exactly the same as he had described to her. They drove straight back to Istanbul, but even that city now frightened her, so he booked them on the next flight to Rhodes, wondering what he would find there.
The Colossus of Rhodes, a hundred-foot bronze state of the god Helios, which in ancient times had bestrode the entrance to the harbour of Rhodes, had been destroyed in the earthquake of 277 BC. Where the Colossus had once been, three windmills now stood on the breakwater that terminated at the Agios Nikolaos Lighthouse in the cluttered modern port of Mandraki, with its caiques, yachts and tourists.
Not knowing what to expect, nor where they should go, Gerry and Ingrid had spent that first day touring the capital of the island, walking along the shore of the Aegean Sea, by the walls and towers of the Old City, past the picturesque houses of the Street of Knights, then back in a restless circle to the pseudo-Venetian and Roman buildings of the waterfront where, bearing in mind that the darkness seemed to help, they sat until the early morning. Bitterly disappointed when nothing out of the ordinary occurred, they had returned to their double bedroom in their modest hotel located above the beach.
Ingrid had managed to conquer some of her inhibitions to the degree where she would change in the bathroom while Gerry waited in the bedroom, but they still used separate beds. And early that morning, when darkness still reigned, Gerry awakened to find the room filled with an eerie light that seemed to emanate from the walls, floor and ceiling, but miraculously didn’t

even shine out through the window into the darkness. Then, in the brilliant light, which had also awakened Ingrid, who seemed fascinated rather than frightened, Saint-Germain materialized, this time alone and wearing a modern boiler suit, to smile enigmatically at both of them while saying: ‘You have come a long way. You have more courage than you know. Divide the sum of the first two numbers by two and you will have the third number. Think about it when sleeping.’
And indeed Gerry had slept, going under almost instantly, adding one to seven and dividing by two and coming up with ‘four’ in his dreams, which then turned disturbingly erotic. He saw Ingrid naked, swaying slightly, smiling at him, holding up four fingers and counting them off one by one. Then she lay down beside him, still naked, still smiling, and he kissed her four times on the belly and heard her soft groanings. The number ‘four’ haunted his dreams, in permutations of lust and loving, and he awakened, still alone in his narrow bed, as dawn lit up the beach.
They both took the boat to Athens, wondering what was coming next. They were still disbelieving of what had taken place, and they felt that a leisurely cruise to Athens would give them time to relax, which in fact it did… while it lasted.

Now, sitting in the bedlam of Constitution Square in Athens, breathing in the appalling stench of petrol and diesel oil, Gerry looked back on that cruise as something invented – something so beautiful and serene that it had to be fiction.

They had cruised through the Cyclades, around the holy island of Delos, explored Mykonos, Syross and Paros and many others, and now recalled only the beauty of the radiant azure sea, the dazzling white chapels, cubist houses and windmills, all perched on the sun-drenched, parched hills beneath the sky’s iridescence – and then the shock of reaching Athens, the sudden clamour and chaos, the roaring, honking traffic, the stench of petrol and the sight of an ugly, seemingly endless, urban sprawl.

He had instantly hired another car, let Ingrid drive him out of all that, south along the toll highway, past more ruins to Corinth, around the Peloponnesian foothills, beneath forests of pine and cypress, high above the Corinthian Gulf,

through Patras with its castle and arcaded street, then sixtyeight kilometres south to Olympus and the ruined Temple of Zeus.

This time prepared for anything, they parked the car well away from the ruins of the ancient site and waited until evening was falling and the tourists had left; then they made their way carefully through the olive trees and ageing pines to where the great Doric temple still dominated the sanctuary, though its broken columns lay scattered under the trees. There, beneath the stars, near the pediments of Zeus's temple, Gerry held Ingrid's tender hand and waited, knowing that something would happen.

And this time, for the first time, he saw it properly. Initially it was just a flash, then a brightening star, then it flared out to form an umbrella of light at the far side of the silhouetted peak of Mount Kronion. Gerry blinked, rubbed his eyes, saw stars, looked again, and then saw a glowing disc, a saucer-shaped, pulsating radiance, expanding as it flew down from the mount and over the trees in slow, stately motion. It stopped right above him, high up, like a great moon, an enormous, incorporeal, pulsating luminescence with a dark inner core. He watched it, transfixed, not comprehending what he was seeing, then it grew wider as it descended towards him and covered the ancient site.

He burned and was dazzled, closed his eyes, thought it would scorch him, opened his eyes as the radiant light surrounded him and illuminated the ground. Ingrid melted into the haze. He felt her hand, but she wasn't there. His skin had stopped burning, the radiance no longer dazzled him, and just as he realized this, the dark inner core covered him.

There was light in that darkness. It took a human form. Saint-Germain appeared in front of him – or, rather, materialized – and he heard that magisterial, icy voice speaking to him again.

'You have the courage and heart of saints. You are both on the right path. Divide the sum of the first three numbers by two and you will have the final number. That is all you will need for now. The rest will come to you later, when we feel that the time is right. Now relax. We will meet again.'

Gerry relaxed into sleep, feeling Ingrid sleeping beside him, falling down into darkness as the pulsating light ascended and the stars fell about him with the rush of the incoming night. He awoke counting up the first three numbers and

dividing by two.
‘*Six*!’ he heard his own voice exclaiming.

That event had occurred this morning. Now they were back in Athens. The traffic was causing bedlam as it crawled around the fountain, the stench of petrol and diesel oil filled his nostrils, but he still couldn’t quite accept that he was awake and not living a dream.

He was haunted by miracles.
Finishing his *ouzo*, he immediately ordered another, had a sip and tried smiling at Ingrid, hoping to hide his deepening confusion; but when she nervously returned his smile, letting her breath out in a sigh, he slapped the table with the palm of his hand in an affirmative manner.
‘Okay,’ he said. ‘So it really happened. Now let’s try to accept that fact.’
‘It happened,’ Ingrid solemnly agreed. ‘We both had the same experience. You thought I was sleeping, I thought *you* were sleeping, yet both of us had the same experience. So let’s try working out what it means.’
From where he sat, Gerry could see the Acropolis, planted on its high, distant hill, its many columns seeming to scrape the fleecy clouds drifting over it. That sky only made him nervous, recalling that eerie, pulsating light ascending vertically, so he had another soothing sip of his *ouzo* and returned his gaze to Ingrid.
‘Saint-Germain gave us the first number,’ he said, ‘when he materialized in the King’s Chamber of the Great Pyramid. That number was *one*. And the other numbers, in the order they were given, were *seven*, *four* and *six*, which makes a magical number.’
‘A magical number?’ she dubiously asked him.
‘Yes,’ he said. ‘1746 is a so-called *magical* number. Add up the digits and the sum is eighteen. And *eighteen* is the sum of three *sixes*, as in 666 – which is, of course, the legendary Number of the Beast.’
‘I’ve never heard of it,’ Ingrid said.
‘It’s taken from the Bible. From the book of *Revelation*. I quote: *He that hath understanding, let him count the number of the beast; for it is the number of a man; and his number is six hundred and sixty-six*… So, in a roundabout way, that’s what we’ve been given – 666 – the Number of the Beast – a magical number.’

‘But why would he give us that number?’ Ingrid asked. ‘And why in such a bizarre manner?’
Gerry shrugged. ‘I don’t know.’
Staring uneasily at her serious, bespectacled eyes, he wished he could let down her hair and then stretch out beside her. He wished for that a lot, but now, when he did so, he recalled his clumsy lunge at her in the hotel in Bloomsbury and suffered another acute spasm of embarrassment. He believed that Ingrid loved him, could feel it and see it, but that very belief only made him more frustrated that they still hadn’t made love. More frustrated and more foolish, even ashamed of himself, because it left him exposed to his own lack of sexual sophistication. He wasn’t a virgin, no, but now he felt like one, incapable as he was of finding a way to conquer their mutual fear.
Also, growing more desperate to find sexual fulfilment with Ingrid, he found himself thinking increasingly of other women, *any* woman, as compensation for the aching need he now lived with. Ironically, then, he realized, it was the very strength of his love for Ingrid that was looming as the greatest threat to their relationship.
He no longer trusted himself.
‘Well,’ Ingrid said, clearly not reading his mind, ‘what do we do now? Go back to London?’
He shrugged again. ‘Yeah, I suppose so. Obviously, there’s no reason for staying here. All we can do is return to London and hope that something new turns up. I don’t believe we’ve heard the last of Saint-Germain – he actually said we’d meet again – so we’ll just have bide our time and wait for him.’
Yet even as he spoke, he sensed that he was being observed, and so looked past Ingrid, over her shoulder, to an outside table at the far end of the café. Sitting at the table, wearing a perfectly normal off-grey pinstriped suit with a white shirt and tie, looking unusually cool in the sweltering afternoon heat of Athens, his smile seductively dangerous beneath glistening eyes, was SaintGermain’s mysterious partner.
‘Oh, shit!’ Gerry whispered automatically. Then, even as he noticed that a perplexed Ingrid was looking back over her shoulder at the man, Gerry’s attempt at resistance was rendered futile, his will reduced to nothing, and he felt himself melting into the heat of a desire that transcended his normal appetites and made that man’s sex irrelevant.

Gerry *wanted* that man, unnaturally, helplessly, and found himself rising to his feet in order to follow those mesmeric eyes and that slyly seductive smile. He couldn't help himself – and saw Ingrid standing with him – and then he followed the man, who had also stood up, as he walked away from the café.
'Gerry!' Ingrid whispered. 'What – ?'
'It's okay, Ingrid. Let's follow him.'
His own voice sounded distorted, reverberating in his head, but he held Ingrid's hand, feeling electric, phosphorescent, ashamed because his only desire was to pursue the man walking on ahead, through the noisy, polluted streets.
He wanted that man. He wanted to take him, or be taken *by* him, to lose himself in the intoxicating radiance of that man's inner light. It was love and desire, a primal, pagan lust, and even as Gerry burned in his secret shame, he could not fight his feelings.
He noticed Ingrid staring at him, perplexed, but could not meet her gaze. This betrayal was too much.
The man kept walking casually, gracefully, occasionally glancing back over his shoulder and smiling ambiguously. Gerry didn't return that smile, but merely stopped when the man stopped, then started walking again when the man did so, being helplessly tied to his quarry. He was led along Stadiou Street, through the main shopping centre, then into the squalor of Omonia Square, where the fountain in the pool dominated the chaotic intersection, and the touts and peddlers gave the area its dubious charms.
In a cluttered street just off the square, the stranger, after smiling seductively back over his shoulder, entered what looked like a sleazy *pension*, or brothel.
'Please, Gerry,' Ingrid said, 'don't follow him in there.'
'I have to,' he replied, feeling insane. 'Damn it, Ingrid, *I have to*!'
He had to virtually drag her into the *pension*, but once inside found nothing but an unattended, extremely grubby Reception office at the foot of steep stairs covered in motheaten, stained carpet, at the intersection of three corridors, all of which looked equally uninviting, though the fat whores leaning against the walls near some of the rooms had a slightly decadent, slovenly allure.
'*Kalimera*,' the nearest one murmured. '*Onomazome Liliane*. You speak English, Mister? I please you. And your friend, she is welcome. *Malista*?'
Gerry didn't respond, but looked at the whore and through her, wondering

where the male object of his unnatural desire had gone.
He hadn't a clue where to go until he heard the stairs creaking… on the landing above him.
'No!' Ingrid whispered desperately. 'Don't go up there!'
'*We have to*!' Gerry insisted.
Obsessed with that diabolically handsome stranger, seduced by his dangerous smile, he dragged Ingrid up the stairs of the brothel, ignoring her protests, until they came to a landing, no carpet, splintered floorboards, a short, bare-walled corridor with three lime-coloured doors on either side, one of them open.
In the open doorway, Saint-Germain's partner was smiling seductively. He beckoned with one hand, the fingers covered in glittering rings, and Gerry, feeling as if he was dreaming, stopped just in front of him, enslaved by the mesmeric light in his silvery-grey eyes, unable to help himself.
'It isn't me you want,' the man said, his voice low and extraordinarily melodious, its accent untraceable. 'What you want is inside.'
Turning sideways, he nodded, indicating that Gerry should enter the room, and Gerry, releasing Ingrid's hand, stepped in without thinking.
The door slammed shut behind him.

Chapter Sixteen

It was a small, perfectly square, cell-like room with no windows, its only furniture being a single bed along the back wall, a hand basin with a surprisingly clean towel hanging beside it, a cracked mirror on the wall just above it.

Sitting on the edge of the bed, her long legs crossed, her voluptuous body covered in a short, see-through black negligé, was a raven-haired, green-eyed woman in her early thirties. When the door slammed shut, she looked up and smiled, then rose to her feet.

Standing upright, she was utterly breathtaking, all hollows and curves, her pubic hair showing darkly through the negligé, which also flowed sensually over firm breasts and clung to her flat belly.

Gerry took a deep breath.
‘How sweet you are,’ the woman said in perfect English, her voice thrillingly sensual. ‘I truly never expected this.’
She came towards him with a languid rolling of her hips, stopped just in front of him and smiled again, her full lips emphasized with moisturizer, her cat’s eyes hypnotizing. Gerry held his breath, drank her in, all too aware of her breathing, hearing it as if hearing music, watching her ample breasts rise and fall. She reached out to place a hand on the back of his neck and draw him close to her.
‘Feel me,’ she whispered. ‘Press against me. Do what you want with me. I am here for your pleasure.’
Though he knew this was a set-up, he couldn’t resist it, his will crumbling in the heat coming from her, his senses slipping away. He thought of Ingrid in the hallway, at the other side of that closed door, recalled the man who had led him here, felt a brief spasm of concern for Ingrid’s welfare and then heard himself groaning. The woman was rolling herself against him, sliding her belly across his groin, and her large breasts, incredibly soft and warm, were exciting him further.
He pressed his hands to her spine, felt her tongue down his throat, was drawn out of himself by her heat and softness, as she writhed against him and tugged urgently at his clothing. Her fingers found his bare back, slid up and down his spine, and he groaned again and move his hands up her negligé, gradually drowning in her. He felt her buttocks, pressed her back against the wall, touched her breasts and pubic hair and sweating thighs as she sucked on his lips.
‘Yes!’ she whispered huskily, ‘that’s it. Do it to me! *Yes*!’
She thrust up with her groin, falling backwards to the bed. Her hands were clasped behind his neck, her lips on his, as her weight pulled him down. He fell on top of her on the bed, sinking into her yielding flesh, excited by breasts and belly and spreading legs, feeling her hands on his spine, along his ribcage and hips, even as concern and guilt whipped him at the mere thought of Ingrid.
She was standing in the hallway, at the other side of that closed door, in the company of that mysterious, possibly dangerous stranger, and this whole episode was some kind of set-up, its motive still hidden. God, he wanted this whore – yes, he did; *God, he did*! – but concern and guilt, based on his love

for Ingrid, brought him back to his senses.
He groaned and rolled off the panting woman and lay flat on his back, lying there for some time, breathing harshly, before sitting up. His loins were still inflamed and he felt dizzy, but he resisted the woman. When her left hand slid invitingly between his thighs, he pushed it away.
'No,' he said. '*Damn you, no*!'
He jumped back to his feet, feeling choked and unreal, then looked down at the woman. She was sitting upright, brushing the hair from her green eyes, smiling at him with what seemed like mockery and admiration combined.
'You don't want me?'
'Just who the hell are you? And why was I brought here?'
'You were brought here to receive satisfaction.'
'I'll have that if you answer me.'
The woman smiled again, this time without mockery, then she nodded decisively.
'You resisted me,' she said. 'That is really very good. I can be hard to resist. How did you manage it?'
'I just thought of someone else. The girl waiting in the hallway, at the other side of that closed door. Now who the hell are you? Just a whore? I don't think so. You and him – that bastard outside – you both work for Saint-Germain, don't you?'
'Yes,' she replied. 'We're *associated* with SaintGermain… and you're trying to find him. Why?'
'He obviously knows that.'
'Ah, yes,' she said, smiling, 'the Tuaoi Stone. You all want the Tuaoi Stone. Why do *you* want it?'
'Because I simply have to prove that it exists – and because I don't want a man named Wilhelm Zweig to get his hands on it. He's after it – and if he manages to get it, he'll rule the world with it.'
'You're trying to save the world?' the woman asked rhetorically, her mocking smile returning. 'Such nobility is truly very rare. Or is it all for the love of a girl?'
Gerry felt himself burning with resentment *and* embarrassment. He leaned back against the wall, once more feeling dizzy, mesmerized by the woman's green gaze, sinking into a reverie… He saw himself on the Nile cruiser, on the deck, in the moonlight, Saint-Germain waving languidly at the eerie,

pulsating light ascending to the night sky… Then Ingrid was there. She was holding his hand and smiling. Her smile vanished when she sat at the table in the boat's bar, beside Gerry, but facing Saint-Germain, who was framed by the window. Gerry saw the dark desert, the riverbank gliding past, then the scene changed to the gardens of the hotel, with the Great Pyramid and Sphinx in the background. He watched himself bidding Ingrid a painful farewell, then saw Zweig and Elena chortling with mockery as he boarded the airport bus that would take him away. When he saw that, his hatred broke his reverie and returned him to the small room, the present, blinking and rubbing his eyes.

'No,' the woman said, 'you're not *completely* selfless… but your heart's in the right place.'

'It doesn't matter what my motives are,' Gerry said firmly to her. 'What matters is that Zweig is after the Tuaoi Stone – and Saint-Germain should know that.'

'Oh, he knows it. Saint-Germain knows *every*thing.'

'Then let him be warned.'

'He doesn't need warning. Wilhelm Zweig will never get to use the Tuaoi Stone, though *you* possibly might. Saint-Germain can find you any time he desires, but until you locate Saint-Germain, you will not see the Tuaoi Stone.'

'He *wants* me to find it?'

'He wants you to *try*. You have been chosen, and so far have been successful, but the testing isn't over yet.'

'The testing?'

'We believe you are a good man, a pure man, though you don't know that yet… and neither do we. We believe it, but we need the proof of it. And we know that only the good, the pure at heart, can find the Tuaoi Stone.'

'I don't understand this. Who are you? What are you doing here? Why was I brought here?'

'You were brought here to be seduced. If you had let me seduce you, you'd have been deemed to have failed this part of the testing. Because you didn't fail – because your love for that girl overrode your lust for me – I'm now permitted to tell you what I know, which is not all that much. I know only enough to give you what you need… to take you on to the next stage.'

'And what's the next stage?'

'I can't say. I can only answer your questions.'

‘This is crazy. I just don’t believe it.’
‘But of course you do, Gerry. That’s why you’re here. It’s your intrinsic believe that has brought you this far. You have the unwavering faith of a saint.’
Suddenly fearful for Ingrid, not trusting this woman’s smile, he turned away and tried to jerk the door open, but found it was locked. Now even more fearful, he turned around and asked, ‘Why am I locked in?’
‘The door will open when I’ve answered your questions. Now what do you wish to know?’
‘Firstly, is Ingrid still out there in the hallway?’
‘She is perfectly safe. She is destined to make this journey with you, so no harm will befall her.’
The woman’s softening tone managed to soothe him a little, but he still found it difficult to think of what he might ask her.
He leaned against the wall again, taking comfort from the feel of it, but when he closed his eyes, even briefly, he drifted away from himself. The woman’s presence permeated him, set fire to his imagination: he had a vivid recollection of Saint-Germain and his friend dressed in white Grecian robes and headdresses in the Temple of Artemis; then of that same Saint-Germain in the eighteenth century, his fingers covered in extraordinary diamonds, his powdered hair pinned behind his head. One vision slid through the other, in defiance of space and time, and when he came to the Saint-Germain in modern clothing, he opened his eyes again, finally managing to get out the question that brought him back to the present.
‘Saint-Germain has given me a magical number, 1746, the so-called Number of the Beast. Why has he done this?’
‘I cannot answer. I have not been informed.’
‘Is it true that the Tuaoi Stone, or the Lodestone, was once the tip of the Great Pyramid at Giza?’
‘Yes.’
‘Why was it removed?’
‘You will find out in due course.’
Gerry sighed, frustrated, feeling that he was being toyed with, wanting to make his escape. ‘What’s the Tuaoi Stone made from?’ he asked.
‘Why does that matter? Simply think of the Great Pyramid as an instrument of astrology and base all of your assumptions on that premise.’

‘The Great Pyramid was a tomb, not an instrument of astrology.’
‘It was both. Now it is only the latter.’
‘It *is*?’
‘It was constructed as a vehicle for transcending the material state, for travel in space and through time, into other dimensions. It retains that ability.’
Feeling a shiver go down his spine, recalling not only his own experience in the King’s Chamber of the Great Pyramid, but also what Saint-Germain had written on the document in the library in Troyes, Gerry found it difficult to think clearly, but managed to speak at last.
‘Constructed by the Pharaohs?’ he asked.
‘The *final* Great Pyramid, the one you know, was constructed by them.’
‘You mean there were others?’
‘You have to search through prehistory.’
‘Beyond our present knowledge of mankind?’
‘That is so.’
He had a vision, then, of that great civilization that extended across the islands of the Aegean Sea, linking Greece to ancient Babylon and the Pillars of Hercules. He saw a different landmass, gleaming pyramidal cities, a flame that joined Earth to the Cosmos, rendering space and time obsolete. The high priests of that civilization, dressed in white robes and headdresses, were magical adepts of vast learning and extraordinary powers. Saint-Germain, who also transcended time and space, had been one of those holy men.
Shaken, Gerry stared down at the oddly exotic woman. She was still sitting on the edge of the bed, her white skin showing through the black negligé, her long legs crossed, hands folded in her lap, her smile one of amusement. She had the eyes of a big cat, bright green bordering on yellow, and they kept him enslaved.
‘Does this relate to Atlantis?’ he asked her, trying hard to be logical.
‘Yes,’ she replied.
‘Where and when was Atlantis?’
‘You have crossed the length and breadth of Atlantis in your journey to me – ’
‘The Aegean Sea.’
‘ – and you also know when it was destroyed – in 1,500 BC.’
‘A natural disaster?’
‘Yes. A volcanic explosion.’

‘And does the Tuaoi Stone – the missing tip of the Great Pyramid – relate to that vanished Atlantis?’
‘I know only a little about this. Those who have studied the occult traditions of Atlantis speak of the use that the high priests of the former world made of the tip of the Great Pyramid as a medium for attracting and transmitting solar energy.’
‘Which suggests that the Tuaoi Stone was a diamond… or some other kind of *crystal*.’
‘If you think it, it will be.’
‘Yet the Great Pyramid is in Egypt – not in the area of the vanished Atlantis.’
‘Everything under the sun has its purpose – and explanations – but I only know this much… Now you must go.’
‘To where?’
‘Back to where you have come from.’
‘London?’
‘Your signposts are the world’s Seven Wonders, and there are three more to visit. To learn more, you must return to where you have come from. You must visit the Tomb of Mausoleus and brave what you find there. That is all I can tell you.’
‘You know nothing else?’
‘Nothing else. Now the door is unlocked. Goodbye… and good luck.’
The farewell was a command, spoken quietly and firmly, yet he found himself unwilling to go, having much more to ask.
He closed his eyes again, concentrating on what to ask, but went blank and then saw a great pyramid towering over the much smaller pyramids scattered over the vast plain around it. The great pyramid was made of stone blocks, but its tip was shining crystal, and the lightning of the elements, phosphorescent and jagged, soared from the tip to the heavens, to form, between the stars and the parched plain, a pulsating white haze.
He looked and was dazzled, blinked and then looked again, saw the same great pyramid, but in another time, its crystal tip missing and the sky dark above it, the pyramidal city around it being covered in dust.
That dust presaged the fire and rain of the holocaust that would sweep all before it, leaving nothing but the silence of desolation.
Gerry opened his eyes again, feeling dizzy and unreal. He tried to stare the woman down, looking deep into her green eyes, but even as he did so he

started losing his senses, felt desire for her creeping back over him to render him helpless.
He thought of Ingrid in the hallway, of the mysterious, seductive man with her, and jerked himself out of his sensual reverie to grab the door handle. The door opened and he stepped into the hallway, then looked frantically up and down.
There was no one in sight.
In a panic, he turned back to the room, but before he could speak, the woman waved her right hand in a gesture of reassurance.
‘Don’t panic. Your girlfriend is waiting for you downstairs, by the Reception. No harm has befallen her.’
Not reassured, Gerry hurried down the stairs to the Reception area, but Ingrid was nowhere to be seen. Frightened, he rushed into the street outside, looked up and down it, but saw neither Ingrid nor Saint-Germain’s partner. Now truly fearful, cursing under his breath, he hurried back into the brothel, up the stairs, to the room that he had been in with the woman.
The room door was open.
The woman had disappeared.
Almost sobbing at his own stupidity, he rushed to and fro, from one room to another, one floor to another, finding nothing but fat whores and their sad, bedraggled clients, none of whom knew anything about a European girl or the well-dressed man with her, none of whom even recalled seeing them. Choked up, in a fever of despair, Gerry rushed past the empty Reception office and out into the street, where he continued his panic-stricken, fruitless search, finding neither the seductive stranger nor his beloved Ingrid.
They had vanished completely.

Chapter Seventeen

Ingrid couldn’t help herself. In despair over Gerry’s behaviour, shocked at how he had left her in the hallway of that brothel with the mysterious, oddly seductive stranger, distressed by her own behaviour after being escorted by the stranger back to her hotel (an unsettling experience in itself), she hurried out of her room, went down to the lobby, entered the hotel’s shop, mostly a woman’s boutique, and meandered restlessly around it, suddenly possessed by the urge to steal something.

She knew she shouldn't do it, but she couldn't help herself. The miseries of her past, mostly caused by her father, were as nothing compared to the pain she had felt when Gerry entered the room in the brothel and, worse, started groaning passionately with that whore soon after the door closed behind him. Standing just outside the door, hearing Gerry's sensual groaning inside the room, and held in the mesmeric gaze of the man who had led them there, she could not doubt for a second what was happening and had burst into tears.

Her heart had been broken at that instant and would never recover. So…
She glanced around the shop, wondering what she could steal, horrified that she was contemplating this again, but unable to stop herself. She was suffering the pain of her grief and had to release it.
Blushing, shaking, aware of her racing heart, she waited until the Greek salesgirl wasn't looking, then slipped a silk scarf off its hanger and hastily shoved it into the side pocket of her jacket. She held her breath as she did it, closed her eyes and waited, at once hoping to be caught and dreading it, feeling shame and excitement at once. When she heard no sound, no cry of protest or accusation, she opened her eyes again.
Gerry was watching her.
Shocked, she just stood there, burning up, shaking terribly, as he hurried between the clothes racks toward her, his lips pursed in a grim line. When he reached her, he leaned close to her, almost nose to nose, and spat his words out.
'Put it back!' he snapped.
'No!'
'*Put it back*!'

'No, I won't!'
'Damn it, Ingrid, do as I say or I'll *call* the salesgirl!' 'Alright, call her, then!' Instead of calling the salesgirl, he grabbed hold of her

right wrist, jerked her hand from her pocket, then took hold of the stolen scarf, pulled it out and hung it back on its hook.

'Come with me,' he hissed. '*Now*!'

Still holding her by the wrist, he practically dragged her out of the shop and turned to face her in the hotel's empty lobby, again leaning very close to her and glaring furiously at her.

'Just what the *hell* do you think you're doing?' he demanded.
'Nothing! It's none of your business!'
'None of my *business*? I catch you stealing like you used to do before and it's none of my business? What the hell does *that* mean?'
She tried to jerk her wrist away, but he refused to let go. 'It means whatever you want it to mean. Now let me go, Gerry.' She tried again to break free, but he still refused to let her go, so instead, unable to look him in the eye, she burst into tears.
Instantly, he tugged her into his embrace and stroked the hair on the back of her head. 'Hey, hey,' he whispered, 'what's up? What started all this?'
'You know, Gerry. *You know*!'
She pulled away from him, but he didn't let her go too far, still holding onto her right wrist and letting her step back only as far as his arm would stretch.
'If you mean…'
'Yes, I do! How *could* you? Oh, God! Just leaving me with that man in that brothel while you…' But she couldn't say any more. She couldn't bear to *think* about it. Just recalling the sound of his sensual groaning was enough to… 'I've never felt so humiliated in my life. How could you? *How could you*?'
This time she managed to wrench her wrist free and instantly hurried off across the lobby, heading for the bar. Hurrying after her, he grabbed her by the shoulders and turned her around to face him once more, looking more hurt than angry.
'Hey, hold on,' he said. 'I just turned down a very nice piece of ass for your sake.'
'Oh, charming! Such language!'
'I did! Swear to God!'
He released her in order to cross his heart, so she started walking away again, wiping the tears from her eyes and feeling increasingly foolish.
'Come back, Ingrid!'
'No! I can't stand you! You're just lying to me. I heard your awful groaning from that room. I even heard the bed creaking, doubtless as you and her fell

across it. Oh, God, how *disgusting*!'
'Well, I don't get too much from you, sweetheart – so, you know, what the hell!'
She burst into tears again, saw the bar, hurried into it, took a seat in a dimly-lit far corner and pulled out her handkerchief. His last remark had hurt her more deeply than she could bear, and was compounded by the guilt it resurrected by reminding her that she and Gerry had still not consummated their love.
It was a sorry state of affairs, perhaps even unnatural, and his remark, while wounding her to the quick, also filled her with shame. She was depriving him, as well as herself, and she couldn't ignore that fact.
Sniffing back her tears, she glanced across the bar and saw Gerry standing in the doorway, glaring angrily at her. She wanted him to leave, was frightened that he might do so; was shocked by what she had heard in that brothel, but more shocked by herself – not only because she'd been about to steal again, but because of what she knew had led up to it.
Dabbing at her eyes with the already soggy handkerchief, she saw Gerry's anger changing to despair as he walked over to her, stopped right in front of her, and looked steadily down at her.
'I'm sorry,' he said. 'I shouldn't have said that. You just made me angry, so I hit back, but what I said wasn't true. I swear to you, Ingrid, I did nothing with that woman. Now are you willing to listen?'
She sniffed, glanced around her, and saw a couple of other customers watching her over their drinks.
'Alright,' she said wearily.
Gerry sighed with relief. 'Good. Now let me get you a drink and explain the whole thing. What will it be?'
'A brandy.'
'It's too early for that.'
'Damn it, get me a brandy! *A double*!'
'Okay, Ingrid! Okay!'
He retreated to the bar, where she saw him having words with the barman, obviously trying to master the language and using his hands a lot. She tried to calm her seething emotions. She felt foolish and ashamed, frightened of what she had attempted, and then the love that she felt for Gerry welled up again and threatened to swamp her. When he returned to the table, a glass in each

hand, she thought of what had taken place in her room and felt even more ashamed.
Gerry placed a double brandy in her hand, then sat facing her across the table, raising his glass of beer in a mock toast.
‘Cheers,’ he said.
She smiled again, then had a sip of the brandy and felt it rush instantly to her head. Gerry leaned across the table to take hold of her free hand, squeezing it tenderly.
‘I swear to you,’ he said, ‘I did nothing with that woman. I only followed that man because I didn’t have a choice, because he sort of *hypnotized* me, and when I entered that room, I swear to God, that woman did the same
– she almost hypnotized me. I *wanted* to make love to her, yes, I did, but then the thought of you stopped me. I wasn’t myself. Believe me, I wasn’t! She tried to seduce me and she almost succeeded, but the thought of *you* jerked me back to my senses. I was saved by my love for you.’
‘That’s true?’
‘Absolutely.’
She felt like crying again, though this time with joy, but instead had another sip of brandy and squeezed his hand in return.
‘You were a long time in that room,’ she said. ‘What kept you so long?’
‘It was a test,’ he replied. ‘This whole trip has been a test. I’m still not sure why, but Saint-Germain actually *wants* us to find the Tuaoi Stone, though apparently we have to earn it first. Don’t ask me to explain that. I’m just as confused as you are. But if I’d let that woman seduce me, we wouldn’t have advanced any farther. According to that woman, Saint-Germain would have deemed me a failure and left us, me and you, without a clue. He’s not leading us on a wild-goose chase. There’s a purpose to this madness. And the only way to find out what it is, is to keep playing the game.’
‘You mean that woman told you something else?’
‘Yes,’ Gerry said, looking even more excited. ‘The Tuaoi Stone *is* the missing tip of the Great Pyramid, it’s probably composed of some kind of crystal, and the original Great Pyramid was at least an instrument of astrology, though of a unique kind. Remember the remarkable statement made by the eighteenth-century Saint-Germain in that document in the library in Troyes?’
‘Not exactly.’

‘It’s here in my notebook.’ He withdrew his notebook from his jacket pocket, opened it at the relevant page and read the statement to her. ‘*We moved through space at a speed that can be compared with nothing but itself… Within a fraction of a second the plains below us were out of sight, and the Earth had become a faint nebula. I was carried up, and I travelled through the empyrean for an incalculable time at an immeasurable height. Heavenly bodies revolved, and worlds vanished below me…*’ He closed the notebook and put it back into his pocket. ‘He wrote that in the eighteenth century? It sounds just like space travel!’

‘So?’

‘Well, that woman in the brothel told me that the Great Pyramid in its intact state – in other words, with the magical crystal, or Tuaoi Stone, as its apex – was a vehicle for, quote, *transcending the material state, for travel in space and through time, into a further dimension…* And if what we’ve both witnessed so far is anything to go by, Saint-Germain is able to do just that – him *and* his partner.’

Recalling Saint-Germain’s mysterious partner, Ingrid shivered helplessly and lowered her gaze to the table, too frightened to look up. She was frightened by the whole affair – by Saint-Germain and his partner, by her father and his brutal henchmen, by where this bizarre search might be leading them and what it could mean – but most of all, she was frightened of what it might be doing to her, particularly in view of what she had just tried in the hotel’s shop just a few minutes ago. She had thought that meeting Gerry had changed her forever, that she would never steal again or set fire to anything, but now she wasn’t so sure.

‘I don’t want to go on,’ she said, still looking down at the table.

‘We have to,’ Gerry responded fervently. ‘We can’t leave it now. *We have to get to the end of it*!’

‘I don’t want to. I’m frightened.’

‘We have to go back to Turkey,’ he said, as if not really hearing her. ‘To the ruins of the Mausoleum, the tomb of Mausolus, in modern Bodrum. It’s another of the Seven Wonders of the World and it’s next on our list.’

‘I’m frightened, Gerry. *I’m frightened*!’

Now she had to look at him, to show him her fear, then she moved her gaze to focus on the man, that diabolically handsome, mesmeric creature who, looking perfectly normal in a light-grey suit, white shirt and tie, had entered

the bar a few seconds ago and taken a seat near the door.
Gerry caught her glance, looked over her shoulder, studied the man a moment, then turned back to face her, his brow furrowed in sudden confusion.
‘Come to think of it,’ he said, ‘what happened to *you* when I entered that woman’s room? What happened while you were waiting in the hallway? Did he say anything to you? Did anything take place between you? Where did you and he *go*?’
Blushing furiously, she finished off her brandy, letting it go to her head. She believed what Gerry had told her about him and that woman… She believed, because it had happened to her and she couldn’t forget it.
‘I couldn’t bear it,’ she said, ‘when I heard you groaning with that woman. Then when I heard you both falling onto the bed, I had to get away. I didn’t speak to that man. He didn’t speak to me. He just stood there in the hallway, smiling at me, until I hurried down the stairs and out of the building. I was crying. I remember that. And I remember that the man followed me out and took hold of my arm. The instant he did that, I calmed down. I mean, I calmed down completely, as if hypnotized.’
She caught Gerry’s gaze and tried to hold it, but failed. Instead, she lowered her eyes again.
‘He waved down a taxi and brought us back here,’ she said. ‘In the taxi, he told me not to worry, that you were perfectly safe, and that everything in the scheme of things had its purpose, including what you were doing with that woman.’ She didn’t know how to go on. She felt a deep shame and bewilderment that made her heart race. Then she coughed and continued. ‘He kept talking to me, softly, hypnotically, telling me not to worry, that everything was preordained, and then, when we entered the hotel, he personally asked for the room key and led me up to our room and let us both in.’
‘And you let him do that?’
‘Yes, I let him do that.’
Gerry released her hand and started withdrawing his own hand, but she reached out, quickly, instinctively, and took hold of his fingers. Gently, insistently, in a trance, she drew his hand back to her.
‘You said it yourself, Gerry – that man almost hypnotized you. Then the woman in the brothel did the same – and almost seduced you. Well, that

happened to me. Christian Grabbe almost seduced me. Yes, he called himself Christian Grabbe, complimented me, mesmerized me, and was stretched out beside me on the bed before I knew what was happening.'
'And you wanted him!' Gerry said bitterly.
'God, yes, I wanted him – so badly, I was hurting – I wanted him to take me, to devour me, obliterate me, but all the time I knew that it was wrong and that it didn't feel natural. Still, I was overwhelmed. I thought I was losing my mind. But then I thought of you, thought *desperately* of you, and when I did, I was released from his spell, I was able to roll away from him and get my senses back. I told him to leave. When I did so, he just smiled again, not maliciously or mockingly, but in what seemed like pure amusement. Then he told me I'd surprised him, that I was someone exceptional, and then he got off the bed and left the room, promising that he would see me again in the very near future… And now he's sitting over there, smiling at both of us.'
Glancing up, she saw Gerry staring over her shoulder, obviously looking at the man now sitting near the bar's open door, then he looked directly at her, his gaze clouded with anger. Not knowing if it was directed at her or not, she felt compelled to explain herself further.
'I was hypnotized, Gerry. Just as you were hypnotized. But when I fixed my thoughts on you, as you fixed your thoughts on me, I was able to break free from that trance, exactly as you did when with that woman. Nothing happened between me and Christian Grabbe. It *nearly* did, but that's all…'
He stared steadily at her, his eyes clouded with rage, but then, when he gently squeezed her hand, she knew who he was angry with. Dropping her hand, he pushed his chair back and stood up, clearly about to cross the room and confront Christian Grabbe.
However, Christian Grabbe stood up, also, smiled mockingly and nodded at Gerry, then quickly left the bar. Following him out, Gerry looked left and right along the pavement, then across the road, but Christian Grabbe was nowhere in sight. Shaking his head in exasperation, Gerry entered the bar again and crossed to where Ingrid was sitting.
'He's gone already,' Gerry said. 'But you and me are still here. So… let's head back to Turkey.'
'I'm frightened,' Ingrid repeated, meaning it, feeling it.
'So am I,' Gerry said.

Chapter Eighteen

‘I own the whole island,’ Zweig said, waving a languid hand, as if it meant nothing to him. ‘I bought it from a famous actor whose film career was virtually over and who had built laboratories here to help the natives. However, once he had his *Geld*, I kicked him off the island and started showing his noble natives what *I* wanted them for.’

He could tell that Kuragin was impressed, as, wearing white shorts and shirt with sandals on his feet, he strolled with Zweig along the beach, exploring the island after a heavy lunch.

The island, in French Polynesia, had 750 acres of lush vegetation, with half a dozen small atolls surrounding it and a reef outside, beyond which his fleet of heavily armed schooners were anchored. The idiot film star, bored out of his mind with wealth and wanting to set the world to rights, had bought the whole island, moved onto it with his extensive family, and built the laboratories in order to help the natives survive the onslaught of civilization by trying to make use of solar energy, develop native-grown produce into food, protect the giant crabs and turtles from extinction, and even transform plankton into food. Zweig, highly disgusted by such a waste of the lush island, had emptied the laboratories and turned them into military barracks; razed all the palm trees to the ground in order to turn the land into firing-ranges; placed barbed-wire and sand-bag fortifications along the formerly immaculate, virgin beaches; and drained and then filled in a lovely natural lagoon in order to build himself a small airstrip and landing-pad for his aircraft and helicopters.

‘As you can see,’ he said, ‘I’ve put the island to good use. And the natives, formerly idle, have *also* been put to good use. I work them extremely hard and, of course, they come in handy when it comes to the training of my men. Here my men learn armed combat, plus physical and psychological torture skills, and the natives are used as victims in this training, when not actually working. Very good, *ja*?’

‘Most impressive,’ Kuragin said, the compliment dropping from his fat lips

with obvious reluctance.
Zweig sighed forlornly, trying to conceal his frustration, furious that he had been reduced to allowing sub-human Soviets on his island. He really wanted to use Kuragin as a guinea pig in a torture session; wanted to see him writhing under the electric prod, not looking so smug.
'Anyway,' Kuragin said, glancing at the band of men who, all wearing old Brown Shirt uniforms, were on a fully equipped forced march around the island's perimeter, with the sea spraying languidly over them where it broke on the rocks, 'my time is strictly limited – '
'You enjoyed the long lunch, yes?'
' – and I think,' Kuragin continued, ignoring the jibe, 'that it's time to get down to business.'
'*Every* time is time for business,' Zweig retorted. 'As you know, I believe this.'
'Quite,' Kuragin said, not smiling as Zweig led him away from the beach and up over a fairly steep slope of white sand and palm trees. He was pleased to note that Kuragin was already sweating profusely, and he wanted to get him away from the cooling breeze in order that he might sweat even more.
'So, *what* business?' he asked the Soviet baboon. 'Everything seems to be going well. I've kept my promise to route more of my products in your direction, and I trust that your request for the supply of high-tech armaments, normally forbidden to you under the Concom convention, has been going through smoothly. Afghanistan, was it? I believe so. You are doing good work there.'
'I can do without your compliments,' Kuragin said testily. 'Let us stick to the issues at hand.'
Instantly enraged, Zweig had to control his more violent impulses. He did so by picking up some stones and hurling them, one by one as he walked, at the birds chattering overhead.
'Of course,' he said, with the uncomfortable feeling that he was on his hands and knees before the Soviet pig. 'I understand.'
'The Kremlin isn't pleased,' Kuragin continued as they crossed the brow of the sand dune and he dabbed at his sweaty face with a handkerchief. 'As our part of the agreement, we have distributed considerable monies to your numerous bank accounts in various tax havens. We have also, as you requested, distributed to your many administration centres and private homes

a great many of the works of art that we found in various locations in Berlin at the end of the war. In return for this, you were to do two things for us: first, increase dramatically the flow of embargoed technology to us; and, second, get us the legendary Lodestone. The former promise you have kept; the second you have still not delivered.'

At the bottom of the slope they came to a sandy clearing in which, beneath a verdant umbrella of palm leaves, some of Zweig's stormtroopers were practising hand-to-hand combat under the supervision of a wellmuscled mercenary. All the young men looked beautiful, like gladiators, stripped to the waist and gleaming with sweat, and Zweig, taking note of their radiant fitness, yearned for what he had lost: his youthful vigour and strength.

'Impressive?'

'Yes,' Kuragin replied.

'They're devoted to me,' Zweig boasted. 'Completely… And would be killed if they weren't.'

'That's the best kind of devotion,' Kuragin said. 'Now what about the Lodestone?'

Annoyed that he hadn't managed to change the subject, Zweig led the flush-faced Russian away from the young gods of war and along a sandy path that wound around coca-palms.

'I am on its trail,' he said, 'and coming close, but you will have to be patient.'

'The Kremlin has never been long on patience and time is now running out. We wish to know what is happening regarding this. We need more specifics.'

'*Specifics*, Andropov?'

'Don't play with me, Wilhelm. You said you had a lead, but refused to state what it was. Since you have still not delivered – and have refused to discuss the matter – we wish to know exactly what you are doing and what progress is being made. After all, this could all be a hoax. The Lodestone may not exist at all.'

'I wouldn't lie to you, Andropov.'

'You would if you had to.'

Zweig sighed again. 'Alright,' he said. 'I will tell you. I didn't tell you before because my own daughter is involved, but clearly I have no choice anymore. The Lodestone exists, my friend.'

They emerged from the coca-palms into another sunlit clearing where a thatched hut, raised high on stilts, was spread out before them. At either side

of the steps leading up to the entrance were two armed guards in tropical battle dress, both of whom, seeing Zweig, snapped smartly to attention, bring their Swiss 5.56mm assault rifles to their shoulders and saluting, before returning to their at-theready positions.
A scream of agony emanated from the thatched hut, then tapered off to a sobbing whimper, interrupted by a harshly barked command and another brief scream.
'My school for torture,' Zweig explained. 'We use the natives as victims, of course. This is not only useful to my men, but also keeps the natives in a state of fear and obedience. Thus the school serves a double purpose and is most economical.'
'I can't hear myself talking for that screaming,' Kuragin said. 'Can we go somewhere else?'
'Of course,' Zweig said. 'This way.'
He started forward, past the thatched hut, but then, when the roaring of guns split the silence ahead, he recalled that the firing range was there and so instead took the path heading west. While they were walking through the shade, under drooping papaya trees, he reluctantly told Kuragin about Ingrid and the American, then about his own magical encounters with the mysterious Saint-Germain. Kuragin looked increasingly incredulous and finally stopped walking.
'This is true?'
'Absolutely. My men have been following my daughter and the American, and wherever those two go, they are followed by Saint-Germain or his men… And when Saint-Germain appears, strange things happen… miraculous things, beyond our logic or science. SaintGermain has the magical powers of one who has found the Philosopher's Stone.'
'Pardon?'
'The Lodestone, or Tuaoi Stone.'
'And he knows that your daughter and her American are following him?'
'Yes, he seems to.'
'Then why doesn't he use his miraculous powers to prevent them from doing so?'
'The only explanation is that he *wants* them to find him eventually, but only when he's ready.'
'Why?'

‘Perhaps because they’ve been chosen.’
‘To join him as adepts?’
‘Yes. It’s possible.’
Kuragin started walking again, forcing Zweig to rush to catch up with him, his smile hiding resentment. Again, there was the sound of gunshots from the firing range, but this time more distant.
‘So what have your daughter and her American found out about the Lodestone so far?’
‘I don’t know,’ Zweig confessed. ‘My men haven’t approached them yet. We keep hoping they will lead us either to Saint-Germain or to the Lodestone itself, but that hasn’t quite happened yet.’
‘*Quite*?’
Zweig shrugged. ‘I’ve already described some of the events witnessed by my men when Saint-Germain materialized to my daughter and the American – miraculous events. However, at no stage could they get to Saint-Germain before he vanished again – and, indeed, it’s doubtful that they could have done anything if they *had* caught up with him.’
‘Then what is the point of this pursuit?’
‘Because I’m convinced that sooner or later SaintGermain will lead my daughter and the American to his lair
– to where the Lodestone is hidden. And then, and only then, can we act – not necessarily by confronting SaintGermain, but by stealing the Lodestone when his back is turned, or when he’s left his lair, and then, hopefully, using its remarkable powers to defeat him.’
They emerged from the trees to the expansive open space that had once been a lovely lagoon and now was a tarmacked airstrip, crossing the whole breadth of the island, with Quonset huts and hangars along one side of it, the sea on the other. Zweig’s half-dozen light-and-transport aeroplanes and four helicopters were lined up along the strip. A Hawker Siddeley HS 125 passenger plane had just roared into life, preparing to take Kuragin to Honolulu, on the first leg of his lengthy journey back to Eastern Europe.
Kuragin stopped walking, studied the aeroplane, looked down at his own feet, furrowed his brow as if in deep thought and then raised his eyes again.
‘It’s clear from what you tell me,’ he said, ‘that this Saint-Germain knows that your men are *also* following your daughter and her American boyfriend.’
‘Yes,’ Zweig admitted, ‘that is so.’

‘Good,’ Kuragin said. ‘So let us speed things up a little. You are to inform your men to stop simply *following* your daughter and the American and, instead, try to capture them. Should they succeed, they are to interrogate both of them to the limit – I repeat: to the limit – in order to ascertain just *how much* they’ve discovered about SaintGermain and the Lodestone. When they’ve done that, they are to terminate both captives.’
‘*Terminate* them?’
‘Naturally. Why not?’
‘I should remind you,’ Zweig said, ‘that one of the captives to be terminated is my own daughter.’
Kuragin chuckled at that. ‘How sentimental you are, Wilhelm. However, my KGB file on you indicates with no uncertainty that filicide would not be alien to you. It also indicates that you have never treated your daughter with any kind of genuine affection. So let’s not play silly games, my friend.’
Refusing to acknowledge this below-the-belt jibe, Zweig merely forced a smile, nodded affirmatively, and then said, ‘Let’s assume I were to do as you ask: what point would it serve? If we terminate Ingrid and her American, we might lose Saint-Germain.’
Kuragin thought about that, his bullish brow furrowed again, then turned away rudely and started walking towards the roaring aeroplane.
‘A good point,’ he acknowledged with ill-concealed annoyance, ‘so let’s proceed in a different manner. Should you be able to capture your daughter and the American – ’
‘We will.’
‘ – you will, as formerly suggested, interrogate them to the limit, to ascertain exactly what they know. You will then pass your daughter on to me personally, tell the American that he is to continue his search for the Lodestone alone, and inform him that if he refuses to do so, I will personally execute the woman he appears to love so much. In this way, we will find out precisely what is going on, and also have more control over the situation, rather than risk losing both of them, as we do at the moment.’
They had reached the steps leading up into the roaring aircraft, and Kuragin, turning around to face Zweig, had to shout at him.
‘So! It’s agreed?’
Zweig had no choice and he knew it, since if he failed to agree, the Soviets would spill the beans about his dwindling assets and then leave him to the

mercy of the financial and legal eagles of the European and American governments. No, he would have to do as he was told… at least for the time being.

‘Yes,’ he said, forcing another waxy smile. ‘Of course. It’s agreed.’

The Russian smiled smugly back and reached out his hand; Zweig shook it, wanting to crush every bone in it, then watched the fat bastard mount the steps and enter the aeroplane. He waved once and disappeared, and then Zweig walked away, heading for one of the Quonset huts at the edge of the airstrip. When he reached it, he went inside, took a seat in the small, surprisingly comfortable lounge, snapped his fingers at the Polynesian steward and demanded champagne. The steward jumped to attention, promptly brought the champagne, and Zweig sat there by the window, watched the aeroplane take off, wished he had planted a bomb in it, and then drank his champagne.

When the plane disappeared beyond the horizon, taking the despised Kuragin to Honolulu, Zweig polished off his glass of champagne, then left the Quonset hut and went back to the main house, where Elena, stretched out on a hammock on the porch, fanning herself and enjoying a cocktail, was complaining to the sweating, nervous Hans about the tropical heat.

‘Stop your whining,’ Zweig said irritably to Elena. ‘And you, Hans, come inside.’

As Elena slid her sunglasses down her nose and looked at him with an uncommon hint of anger, he led Hans into the cool interior of his palm-thatch house, conveyed Kuragin’s demands to him, and finished by telling him that this time his men must not fail.

‘If they do,’ he said, ‘they might as well kill themselves, because I’ll just hunt them down; and then, when I’ve disposed of their sorry lives, I’ll personally take over this whole affair and ensure that it’s handled correctly. Is that understood?’

‘Yes, Herr Zweig, it is.’

He stared at Hans for some time, wondering what the handsome young man was thinking, and then, remembering what he had made him do not so long ago, executing the two failed hoodlums, he had to suppress a shudder, shocked that the ravages of old age could make him so desperate.

Yet Hans’ face was unreadable, making Zweig uneasy, and he decided to show the young man that the intimate act that had taken place between them

was not a sign that he, Hans, could take liberties.
‘Good,’ he said curtly. ‘So get to it immediately. And when you leave, tell that whore to come inside and attend to my needs.’
When Hans nodded and left, Zweig took off his clothes, stretched out on the bed, spreadeagled himself, and waited for Elena to come in. When she did so, sweating nicely, her body lush in the barely-there bikini, he told her to go to the wardrobe and put on some proper clothes. Elena did as she was told, but with a kind of dumb insolence. She withdrew her favourite ‘play’ clothes, stripped in front of him and put them on, then picked up a set of leather thongs and a short-handled whip. Then, wearing the jackboots, SS jacket and black stockings, she crossed the room and proceeded to tie Zweig up while he licked his parched lips.
‘It’s terrible to grow old,’ he murmured. ‘Hurt me gently, Elena.’
‘You can depend on it,’ she said, spitting her chewing gum into the palm of her free hand, then pressing it down on his forehead. ‘It’s all in a day’s work.’
Zweig closed his tired eyes.

Chapter Nineteen

Driving the sixty miles from al-Hillah to Baghdad, along dusty flatlands parallel to the Euphrates river, Gerry felt like a different person to what he had been. He was haunted by miracles, by the deep well of the unknown, and he couldn’t shake off the startling recollections of what he and Ingrid had been through since leaving Athens three weeks ago.

That three weeks seemed like three years, or like a timeless, bewitching dream, and he knew Ingrid felt the same way. He wasn’t sure just how, but he knew it to be true. He and Ingrid had changed, were no longer quite human, had been touched with the reality of magic and now believed all was possible.

Because of what they had witnessed, they could never go back to being what they had been.
Even now, Gerry could see in his mind the unveiling of miracles. In Bodrum, in Turkey, above the ruins of ancient Halicarnassus, they had seen the great

Mausoleum materializing out of the night, its thirty-six columns supporting a twenty-four-step pyramid surmounted by a four-horse marble chariot, the whole towering edifice with its numerous statues of kings and queens shimmering in the pulsating light cast down from the night sky.
That light, beaming down, flattened out as it descended, soon covered the whole tomb, obliterated it and shrank back into a dark core in a shell of luminous energy, out of which, with the ambiguous smile of a Sphinx, stepped a different Saint-Germain.
Different, but only slightly, dressed in Anatolian robes, his face more lined than it had been before, more Asian in features. He had emerged from the light, advancing magically, as if on air, and had handed to Gerry a crumbling parchment upon which, drawn in what appeared to be fading paint, was an illustration of the Ishtar Gate of ancient Babylon.
Having done that, he returned to the light, which then flared up and disappeared, as if sucked back in upon itself, leaving everything normal once more.
Gerry remembered it vividly. He *didn't* remember it: he still lived it. As he still lived what had happened in Babylon…

Gerry and Ingrid had returned to London, overwhelmed by their experience in the ruins of Halicarnassus, had holed up in another hotel while applying for visas to Baghdad, had managed to obtain the visas after much reluctance on the part of the Iraqi embassy, and had then ventured forth again, to visit ancient Babylon in all-Hillah, approximately sixty miles south of Baghdad… this time to an adventure which even for them had no parallel.

Gerry tried not to think of that particular adventure as he drove back to Baghdad. It was too much to contemplate. Instead, he glanced sideways at Ingrid, who was clearly exhausted, and asked, 'Are you sleeping?'

'Yes,' she replied. 'Please don't waken me.'
'Ah!' he said. 'Right!'
'I want to sleep, but I'm frightened of dreaming, which

makes sleep impossible.'
'I know what you mean,' he said.

And indeed he did, since sleep eluded him also, the

very closing of his eyes being an invitation to recollections almost beyond the comprehensible.

They had arrived in Baghdad yesterday and drove straight to al-Hillah, a modern town built from the bricks taken over the centuries from the ruins of Nebuchadrezzar's Babylon. Driving up to the replica of the Ishtar Gate at the entrance to the site, with its baked clay bas-reliefs of sacred animals, arched doorway and twin towers, Gerry had experienced a feeling of eerie desolation and the hauntings of almost total silence. They had arrived in the blistering heat of the afternoon. Because of the ongoing war between Iraq and Iran there were no tourists, and so they spent a leisurely few hours exploring the extensive ancient ruins by the Euphrates river, including the remains of Nebuchadrezzar's palace where Alexander the Great had died; the Emakh temple; the banquet hall where Belshazzar saw the handwriting on the wall; the site of the Tower of Babel; and, finally, the foundations of the Hanging Gardens, deemed in Hellenistic times to be one of the Seven Wonders of the World. There they had to wait for the sunset and their next magical experience.

When the sun set, they *had* their experience and would never forget it.
'Are you sure we're on the right track?' he asked Ingrid, feeling anxious.

'Yes,' she replied patiently, or, perhaps, wearily, looking down at the map of Baghdad spread out on her knees. 'It's a street in a bazaar near the Mosque of Kadhimain, a few miles north of the city, on the west bank of the Tigris. Don't worry, we'll find it.'

'I just wonder if that blind seer is still alive.'

'He's alive,' Ingrid said. 'Saint-Germain wouldn't tell us to go there if he'd died. He just doesn't work that way.'
When she said that, Gerry realized just how completely he had come to accept the fact of Saint-Germain's magical existence, which may, as he also realized, have been SaintGermain's purpose in exposing him and Ingrid so gradually to his incredible world.

What should have been impossible to comprehend, let alone accept as fact, now seemed like the only true reality in what had once been, at least to Gerry, a material world. Now, he was adjusting to it – or was at least accepting the reality of that other world – and he sensed that part of the purpose of this great search was to aid that adjustment.

Eventually, they arrived at the Mosque of Kadhimain, a few miles north of Baghdad, and parked the car near the bazaar marked clearly on Ingrid's map. As they made their way through the labyrinthine lanes and alleys, past stalls and shops filled with copper and silver and cloth, brushing shoulders with local Arabs, Afghans, Armenians, Kurds, Lurs and Sabaeans, hearing the sharp shatter of Arabic in Kurdish, Turkish and Syriac dialects, Gerry realized how he, who had never left America before, had finally begun to accept as perfectly normal the diverse strangeness of foreign peoples.

Indeed, as he searched with Ingrid for the address scribbled on the map given to him in a miraculous manner, the very strangeness of the environment, instead of overwhelming him, made him think back on all the places he had been since the beginning of this journey: Athens, Olympia, Crete and the Cyclades; then Izmir and Bodrum in Turkey, now here in Baghdad, the foremost city of ancient Mesopotamia, in an Islamic country at war. All of those places, and his experiences with Saint-Germain, had changed him completely, perhaps irrevocably.

'Here it is, I think,' Ingrid said.

They were at a shop selling copper pots and pans, at the very far end of the bazaar, where the narrow lane broadened into waste ground, over which was strewn a lot of rubbish. In the distance, beyond the rooftops of the bazaar, they could see the golden domes and minarets of the magnificent Mosque of Kadhimain, over which a few clouds were lazily drifting. But here, at the far end of the bazaar, there was an air of poverty and desolation.

An old woman wearing a black shoulder-to-toe *abaya*, with a *hijab* head covering, was sitting on a wooden chair in the entrance to the shop, wiping sweat from her badly wrinkled, brown-skinned face with visibly trembling fingers while watching a bright-eyed Arab boy, wearing the traditional loose trousers, shirt and sandals, as he rearranged the pots in the open window.

Ingrid spoke to the old woman in faltering Arabic, and the boy, hearing her speak, looked up and offered a radiant smile.

'English?'

‘English-speaking,’ Ingrid replied.
‘I speak English,’ the boy said.
‘We’ve come to see the blind man,’ Ingrid said. ‘Hasan al-Takriti.’
‘You wish to buy something?’
‘No. We wish to speak with him.’
‘Okay. Follow me.’
They were led into the cluttered front part of the shop, then through the small, equally untidy room behind it, and finally into a spartan bedroom, lit only by the striations of sunlight beaming in through a single open window.
The room was dusty and smelt of human decay.
Propped up on a narrow, rickety cot was an extremely old man with a white beard and unshorn hair, a head seemingly too big for his shrivelled body. He had unusually large, glassily brilliant eyes.
He had no arms or legs.
Gerry twitched with shock, but managed to control it; he felt, rather than heard, Ingrid, beside him, sucking in her breath. Also taking a deep breath, he focused his gaze on the old man’s lips, avoiding as much as possible the limbless torso below those glassy, sightless eyes in that remarkably large head.
The man moved his head slightly, left to right, up and down, as if trying to observe the room through his ears. The boy spoke to him in Arabic, then, smiling encouragingly at Gerry and Ingrid, took a chair by the bed. The old man moved his head in their direction, his sightless eyes turning towards them, while his lips, trembling slightly beneath his white moustache, finally offered some whispered words.
‘Hadim says you are English.’
‘I’m actually American,’ Gerry said. ‘My name’s Gerry Remick. And this is Ingrid Zweig. German by birth, but educated in England and Europe.’
‘You wish to see me?’ the old man whispered, as if about to lose his voice.
‘We were *sent* to see you.’
‘Ah,’ the old man croaked, ‘I understand. You have visited Babylon.’
‘You were expecting us?’
‘Yes. I have been aware of your coming since yesterday. I was told you would come here to speak with me.’
‘Told by whom?’
‘The only one I can see. The one who often materializes to me.’

‘Saint-Germain?’
‘He has many names. And has lived many times.’
The old man’s head looked almost as big as his limbless torso, and again Gerry felt a shiver go through him at what he was seeing: a blind accident of fate, life’s hidden nightmare, the unthinkable moulded in flesh and blood by some demon creator.
As if sensing what he was thinking, the old man smiled at him.
‘Were you prepared for me?’ he asked.
‘No,’ Gerry replied.
‘I was born like this, my son, so know of no other condition. The pain was greater for my mother than for me, the nightmare more lasting. We are all born in innocence. Nothing can change that fact. In my innocence, I accepted my condition as being the normal; I only knew that I *was*. And why should I know otherwise? I was fed, clothed and bathed. I grew into manhood like a baby, accepting what I was given, protected by blindness. I have never seen a human being. I cannot touch them with fingers or toes. I can only *imagine* what humans look like, though you are forced to see me. Only later, in adolescence, was I told what I was, and suffered great horror and revulsion for a long time thereafter.’
Although he was sweating, Gerry went cold all over, imagining what this creature on the cot had endured when his innocence was replaced with the knowledge of what he actually was to those who could see him. He would have screamed in terrible silence, falling backwards through his terror, then turned over with the lurching of his heart to greet the face of insanity. Somewhere down there, in the dark hole of his Self, imprisoned in a mind supported by a limbless torso, he would have quivered like a fly in a spider’s web, viewing God as a nightmare.
Yet he had somehow survived it.
‘I retreated into myself,’ he confirmed, ‘into the hidden depths at my centre, and found that my spirit was more abiding than the shell of my body. I took faith from that knowledge, ignoring the flesh, exploring the spirit, and found sanity in this dialogue with myself, the acceptance of *being*. I discovered that the world of mind, which is the spirit, has no limitations; that I could travel back and forth at will, through boundless space and endless time, gaining insight by so doing. The material world, which before had been but darkness, took shape inside me, and I no longer needed eyes to see, nor limbs to let me

feel. I recreated the material world within myself and took my place in it.’
Gerry glanced at Ingrid, aware of what she must be feeling, observed the tight line of her lips, the teeth biting her lower lip. His heart went out to her, but the voice of the limbless blind man, a deathly whisper, drew his reluctant gaze back to the bed, to the nightmare ensconced there.
‘Thus I found serenity, the absolute of existence. Though a nightmare to others, I transcended my physical prison and located the beauty of the Self that few mortals see. Though sightless, without limbs, I saw and touched the All, and because I was in that state of grace, he recognized me and came to me.’
‘Saint-Germain?’
‘To me, he is nameless. He simply materializes in the radiance of his light – as he also appeared to you. I saw him approach you in ancient Babylon, where he passed on my name. He passed my name and address through space and time, to bring you to this room. He has his reasons. I know them not.’
Listening, Gerry was transported back to the ruins of ancient Babylon, to when he and Ingrid had waited in the full moon for something to happen. And in that instant, they not only observed the magical event, but were actually sucked into it…

The manifestation had materialized through the low clouds, first a silvery pinprick, then a large, saucer-shaped incandescence, then that familiar globe of pulsating white light with a dark inner core. It grew bigger as it descended, finally hovered above the ruins, spreading out until it covered the ancient stones and made them appear to dissolve.

Saint-Germain did not emerge immediately. Instead, the dissolving ruins started changing. They changed shape, becoming what they had been in prehistory, and then Babylon reappeared, the largest city in the known world, spread out magnificently on both banks of the Euphrates river, the older city on the east bank, the rebuilt city on the west side, the great walls forming a triangle placed flat on the earth, with the Palace of Nebuchadrezzar II enclosed in its apex, north of the Greek Theatre and Main Citadel.

Initially, Gerry only saw it from a distance, his gaze drawn to the blue-glaze temple surmounting the 300-foot high Tower of Babel, then taking in the

other four temples in the eastern half of the city, then himself dissolving *into* the city with Ingrid beside him. And then, by some miracle, he found himself in what he instinctively knew to be the suburb of Esagila, where the quays were packed with trading vessels, warehouses and hundreds of workers, most of whom were swarming in and out of the warehouses, up and down the numerous gangplanks, carrying copper goods and leather, baskets bulging with dates, sacks of wheat and barley and trays stacked with goats' cheese.

It was a scene of extraordinary industry, exotic, cacophonous.
Gerry stood there on a quay, wearing common robes like Ingrid, feeling unreal as he waited for Saint-Germain to appear on the desk of the sailing ship that, looming over them and creaking against the tide of the river, its decks also swarming with labourers and sailors, was obviously being prepared for another voyage across the high seas.
Then Saint-Germain appeared, a Chaldean regent, dressed in finery, and came down the gangplank with armed soldiers front and rear, their swords glittering in the brilliant sunlight of noon, their leather straps and sandals covered in dust and gleaming with sweat.
Gerry felt that he was dreaming, yet was vividly aware, and witnessed himself taking the parchment that SaintGermain handed to him. Saint-Germain smiled at him. Dazzling sunlight flashed around him. He dissolved into that light, as did the whole ship eventually; then the light became blinding, filling Gerry's eyes with stars, and he glanced sideways to see Ingrid also melting into that silvery haze. He called out to her, felt her hand, grasped her fingers, then slipped into the arms of Morpheus and dreamed the dream he was dreaming.
When he awakened, he found himself stretched out beside the sleeping Ingrid, in the ruins of the Hanging Garden, in the grey light of dawn.
In his hand was a ragged, fading parchment on which was drawn a map of the bazaar near the Mosque of Kadhimain in modern Baghdad, with a spindly arrow pointing to a particular spot in the maze of alleyways, and a message, written in that now familiar, slightly archaic hand, saying, '*Visit the blind seer in the shadow of the Temple – for only the blind can truly see*…' It was signed: *SaintGermain*.

Now, staring at the blind seer, who was also without limbs, Gerry shuddered

to think of how he had been guided here, still unable to credit it. He placed a hand on Ingrid's shoulder, squeezed it encouragingly, then returned his attention to the old man, who, as if sensing what Gerry had done, tilted his head again.

'So,' he said, 'you were sent here to learn something.

What is it you wish to know?'
'I've been led to believe that Saint-Germain might be
thousands of years old. I want to know if that's true or not.' 'You had your proof this morning, my son, at the ruins
of Babylon. What more do you need?'
'How did I receive this message to visit you?' 'You *know* how you received it, my son. Through
boundless space and time, via Saint-Germain.'
'Was I really in ancient Babylon or did I just dream
it?'
'If you perceived it, you lived it.'
'I could not receive a physical parchment from my
thoughts. I could not will it, or imagine it, into being.' 'What parchment? Where is it?'
Gerry looked at Ingrid who had been holding the
parchment-map with its annotations for how to get to this
blind seer, but she was staring down, bewildered, at her
hand, which was clearly empty.
'Where…?' Gerry asked, but could not complete the
question.
'I don't know,' Ingrid said. 'I was holding it a couple
of minutes ago. I swear, *I was holding it*!'
They both glanced at the bright-eyed boy, who was
still in his chair, his feet hooked under its wooden supports,
his chin in his hands. Then they glanced around the spartan,
gloomy room, but there was no sign of the parchment
anywhere, not even on the floor where it might have lain
had Ingrid dropped it. When Ingrid shrugged, looking even
more bewildered, Gerry turned back to the old man. 'We've lost it,' he said.

‘You might never have had it,’ the old man said, smiling. ‘On the other hand, maybe you did. Either way, you came here.’
‘Where did Saint-Germain originally come from?’ Gerry asked.
‘From prehistory, from beyond human knowledge, from the world that was then.’
‘Atlantis?’
‘Some would call it that. Others say it was Eden.’ ‘It’s said that Atlantis was in the Aegean Sea, and that it was destroyed in 1,500 BC when Santorini exploded. Was Saint-Germain alive at that time?’
‘Naturally.’
‘So that’s where he came from?’
‘No. It was simply one of his resting places. SaintGermain has been to many places and that was but one of them.’
‘But a lot of evidence indicates that he originated in Atlantis.’
‘There is no single Atlantis. All the legends of lost civilizations, such as Lemuria, Mu and Atlantis itself, are based on the numerous civilizations lost throughout the history that preceded our own.’
‘Modern historians would argue that point,’ Ingrid said, ‘claiming that there were no civilizations before our own.’
‘They would be wrong. The earliest of the civilizations of prehistory existed millennia ago, when the landmasses of Africa and India were joined. That was the first great maritime civilization, which eventually, through migration by land and sea over the centuries, found its way to another landmass in the Atlantic Ocean, where a new civilization was formed from the influx of the old and was, accordingly, called Atlantis.’
‘Do you know anything about it?’ Gerry asked. ‘Not much. Only that it was highly developed and

possessed a sacred stone called the Tuaoi Stone, or terrible crystal. It suffered three periods of great destruction by natural causes, mainly volcanic. But before the final destruction of that mighty civilization, the high priests removed the sacred stone, actually crystal-based, from its location at the peak of their greatest temple of learning – which was, in fact, a pyramid, as were most of the Atlantean buildings – and took it with them when they fled by boat across the North Atlantic Ocean to the Mediterranean, past the so-called Pillars of Hercules, to the Aegean Sea, between Crete and Santorini, to form another civilization, the one commonly mistaken for the original Atlantis.'

'And Saint-Germain was one of those high priests?' 'At that time, yes. Saint-Germain is a magical adept from that original Utopia, the one that existed about 200,000 years ago in the single landmass of Africa and India. He was one of those who migrated from that mighty civilization to form a new civilization, Atlantis, in the Atlantic Ocean. Between the three great catastrophes that destroyed that civilization – over a period of approximately 5,000 years, ending about 10,000 BC – Saint-Germain became a magical adept, discovered the Philosopher's Stone – the compound of the Tuaoi Stone – and through it learned the secrets of immortality, disappearing from, and reappearing on, Earth when necessity called.'

'So he must have been one of the highest of high priests,' Gerry said.

'Yes. It was he who forecast the final destruction of that Atlantis, and so fled with the sacred Tuaoi Stone and his higher adepts – just before their civilization disappeared under the waves of the Azores and Sargasso Sea – to the more welcoming islands of the Aegean Sea. There they formed the foundations for another civilization. Over the following centuries, that great and powerful civilization conquered North Africa, including Egypt; and in the latter, about 4,000 BC, more pyramids were erected and the Tuaoi

Stone, also known as the Lodestone or terrible crystal, also triangular in shape, was placed on the peak of the mightiest of those constructions – the Great Pyramid of Cheops, at Giza.'

'Which was built about 2,500 BC,' Ingrid said. 'In 2170 BC, to be precise,' the blind seer corrected her. 'The higher adepts of the Aegean Atlantis travelled by sea to Egypt because they wished to build their great instruments of astronomy and alchemy – the pyramids – at the exact geographical centre of the world's landmass, which at that time was at Giza, in Egypt. In 2170 BC, when the Great Pyramid was constructed, its summit pointed to the sun at noon; and at midnight of the autumnal equinox, it pointed to Alcyone in the constellation of Pleiades, the centre of the then known universe. The number of days in the solar year is set in the measurement of the Great Pyramid's base perimeter, a hundred pyramid inches being given to each day. The pyramid inch, 1.001 of the modern inch, is exactly one five-hundred-millionth of the polar axis of Earth.'

'I don't wish to be rude,' Ingrid said gently, 'but how do you know all that? You're limbless and blind and have spent most of your life on that cot, so how could you…?' 'I have been taught all these facts by Saint-Germain, who also told me that in the Great Pyramid's inner chambers, students of the mystery religions – astrology, alchemy, and other esoteric sciences – were initiated. Those students included Plato and Pythagoras. So, yes, the Great Pyramid was, first, an observatory, second, a temple of occult learning, and only in its final stages a burial chamber – though even this was merely an acknowledged ritual, since no actual persons were buried there, but only the symbols of life.'

'So the Tuaoi Stone was placed at the top of the Great Pyramid about 270 years before the Atlantis in the Aegean Sea was destroyed, about 1,500 BC, in the tidal waves

created by the explosion of Santorini. Presumably it was later removed from the tip of the Great Pyramid by the magical adepts who were then looking after it. But why? And where did they take it?'

'It was removed because a corrupt civilization was encroaching upon Egypt and the magical adepts fled from that encroachment. Where they went eventually, I cannot say, since the whereabouts of the Tuaoi Stone is only revealed to those who are chosen in their own lifetime to become an adept. I have not been so chosen, but am hopeful that my day will come soon. This is all I can tell you.'

'Does the society of magical adepts still exist?' 'Yes, my son. Naturally. After all, *Saint-Germain* exists – and he is the highest of the high. Though where that society is located I do not know.'

'Are any of the adepts,' Ingrid asked, 'apart from Saint-Germain, human beings with whom we could identify?'

'Yes,' the old man said. 'I have already mentioned two of them, Plato and Pythagoras. The others I know only as names that have sprung from Saint-Germain's lips over the years: Nebuchadrezzar, Jesus, Buddha, Mohammed, the wizard Merlin, Roger Bacon, Christian Rosenkreuz, Georg Faust, Paracelsus, Christopher Marlowe, Lord Lytton… The list goes on, my son. It is a thread running back to the darkness of prehistory, winding around the present and then on to an as yet unknown future. They exist. They are here and now.'

'Did you say *Georg Faust*?' Gerry asked him. 'I believe so,' the old man replied. 'That name rings in my head with all the others.'

'Is there anything else you can tell us?' Gerry asked. 'Anything at all?'

'No,' the old man said. 'You were sent here to be told all I know and that is all I know.'

Gerry took a deep breath and glanced at Ingrid. He saw that she was looking slightly dazed, her gaze lost in the infinite mysteries of history and the problematical future. He recalled Saint-Germain as a Chaldean regent in ancient Babylon, wearing Anatolian robes in another time and place, sitting urbanely in a neat suit in the bar of the boat on the River Nile, of his impossible presence here, there and everywhere, in the past and the present. He was one or many men, possessed extraordinary powers, and was part of a secret society that had emerged from the distant past, survived throughout the ages, and now had tentacles reaching out across the globe for some obscure purpose. Yes, it was a conspiracy, a vast, complex plot, and he and Ingrid were being sucked into it and might never escape. Shaken by these thoughts, he reached out to Ingrid and took hold of her shoulder, feeling her reality, the warmth and softness of skin and blood. Then he stepped up to the old man, wanting to touch him as well, to place his fingertips on that unnaturally large brow, above the blind eyes, and let that creature without arms and legs at least *feel* his gratitude.

He was just about to do so when the woman outside screamed, copper pots clattered noisily on the ground, as if knocked over, and two Caucasians, both wearing light grey suits, burst into the room, slapping Ingrid aside, pushing Gerry against the wall, one of them staring stupefied at that *thing* on the cot, the other aiming a pistol at Gerry's head and spitting into his face.

'Make one move and you're dead,' he said.

Chapter Twenty

Ingrid pressed herself against the wall, her heart racing, and tried to avoid the murderous gaze of the hoodlum in front of her, instead looking across the room to where Gerry was likewise pressed against a wall, but with the other hoodlum's pistol aimed at his head. That sight only made her heart race all

the more, so she glanced obliquely at the blind old seer on the cot, saw his head tilting to one side as he concentrated on what was happening. Beside him, the boy slid off his chair and stood upright, his large brown eyes flicking from one hoodlum to the other in disbelief and excitement.

Then the hoodlum in front of Ingrid slapped her face again, took hold of her chin, shook her head violently from side to side and snarled, 'Keep your damned eyes to the front, otherwise I'll get nervous and do you damage.' He pulled something from his pocket and a glittering blade snapped open right in front of her face. '*Verstehen Sie mich*?'

'Yes,' she replied, ashamed to be shaking. 'I understand.'
'Good,' he sneered. '*Very* good!'
He waved the blade threateningly in front of her face, then turned his gaze to the doorway as, accompanied by the clatter of more falling copper pots, the woman who had been seated out front was thrown roughly into the room, followed by a third hoodlum, this one wearing an immaculate tropical suit and matching shoes, his lavender shirt open at the collar, his black hair thick with grease. He stared calmly around the small, now crowded room, then fixed his gaze on the limbless, blind old man and said, 'Christ, what's *that*?'
'He's blind,' Ingrid said.
'He's more than blind,' the hoodlum said. 'So,' he continued, returning his gaze to her, 'you're Zweig's runaway daughter.' When she failed to reply, he turned his calm gaze on Gerry. 'And you're the American he wants. Nice to know you, kid.'
Staring at the man from under the barrel of the pistol now resting lightly on his forehead, Gerry likewise didn't respond.
'You're being pretty wise,' the hoodlum said. 'Silence is golden. But it won't be so golden if you try to avoid answering my questions.'
'Go to hell,' Gerry said.
'You're not as smart as I thought,' the hoodlum said. 'I'm real disappointed.' He glanced down at the Arab woman, who was whimpering on hands and knees, at the bug-eyed boy, then looked intently at the limbless, blind old seer, that *thing* on the cot. Seeing him fully, he shook his head from side to side, as if in weary perplexity.
'Can he at least *hear*?' he asked the boy.

‘Yes,’ the boy said.
The hoodlum looked at Gerry, grinned crookedly, and said, ‘You came here to talk with *this* old fucker? What the hell could *he* know?’
‘Nothing,’ Gerry said.
‘You lying shit,’ the hoodlum said. ‘If you came here to see him, he must know *something*, though God knows what it is.’ He grinned laconically again, almost amiably. ‘Never mind, kid, we’ll find out soon enough. Hey, you! You on your hands on knees. Stop all that snivelling.’
The Arab woman stared up at him, her eyes wide and frightened, then she crawled away and huddled up in a corner while the old man’s head tilted again.
‘Who are you?’ the old man asked, his voice firm. ‘What do you want here?’
‘Shut your mouth,’ the hoodlum said. ‘You’ll have plenty of time to talk. Only then, when you do, you’ll be *answering* questions, not asking them, buddy.’
‘I resent your tone of voice,’ the old man said. ‘I refuse to talk to you.’
The hoodlum stared calmly at him, then approached the cot. He gave the old man’s face a short, sharp slap, then stepped back again.
‘Be careful, old man,’ he said. ‘Don’t get on my nerves. You could soon find yourself without a tongue, without ears or nose, let alone arms and legs. So try not to annoy me.’
‘Who are you?’ Gerry asked. ‘Do you work for that bastard, Zweig?’
‘He wouldn’t like to hear you calling him names. Believe me, Remick, he wouldn’t.’ The hoodlum turned to Ingrid, looking her up and down as if examining merchandise, then settling his gaze on her face. ‘I’m Louis Palladinos from New York. I freelance. These two goons here, both Germans, belong to your old man, who wants you back home real quick.’
‘And what about him?’ Ingrid asked, indicating Gerry.
‘Your dad has a use for him.’
She closed her eyes for a moment, thought of her father, felt a wave of revulsion course through her and then opened her eyes again. She caught Gerry staring at her, saw a flickering smile, then returned her attention to Palladinos.
‘How did you find us?’ she asked him.
‘*Find* you? We never lost you in the first place. You know your old man, lady. He’s got eyes and ears everywhere. This is the age of

telecommunications and secret agents, and I'm just another one of the many who work for him.'
Ingrid felt like a fly caught in a spider's web. She could actually visualize that great web, a network of electric cables and satellite links and fax machines, of anonymous spies in airports and train stations and hotels and parked vans – and there, in the middle of it, biding his time, watching distantly, was the spider that would eventually destroy them – namely, her father.
Looking at Gerry, she felt a rush of love for him, then reluctantly returned her gaze to Palladinos, whose crooked grin was unsettling.
'What I want to know,' he said, 'is exactly what you two have found out about the so-called Lodestone and that guy who supposedly knows all about it, Count SaintGermain. Now do *you* want to tell me?'
'No,' Ingrid said, surprised at her sudden loss of fear, emboldened by the urge to defy him.
'Are you sure about that?'
'Go to hell.'
Palladinos sighed. 'I like a woman of spirit,' he said sardonically. 'I surely have to admire that.' He then turned slightly to the side, pushed the barrel of the other hoodlum's pistol aside, and stared steadily at Gerry.
'You're sweating,' he said.
'It's hot in here,' Gerry retorted.
'I'm cool as a cucumber,' Palladinos said, 'but you're sweating a lot.' His grin broadened as his gaze flicked to Ingrid before returning to Gerry.
'Okay,' he said, 'are *you* going to tell me what Zweig wants to know?'
'What's that?' Gerry asked.
'What you've learned so far about Saint-Germain and the Lodestone, or Tuaoi Stone.'
'No,' Gerry said.
'I think you might.'
'I won't.'
Palladinos nodded, as if understanding Gerry, then snapped his fingers at the hoodlum in front of Ingrid and said, 'Get her ready.'
The hoodlum grabbed her by the collar of her blouse, tightened it into a noose, then used it to jerk her upward, until her toes were barely resting on the floor. He placed the blade of his knife under her nose and stared coldly at

her.
‘We’ve been following you for so long,’ Palladinos said, ‘and now you won’t even talk to us. My feelings are hurt.’ He turned back to Gerry and said, ‘This bitch won’t look so good when her nose has been removed, so why not save her that embarrassment?’
Ingrid tried to call out to him, but the collar of her blouse, being like a noose, was choking her.
‘No!’ she croaked. ‘Don’t tell him a thing, Gerry. Don’t give my father that satisfaction.’
Though unable to move his head because of the pistol, Gerry managed to turn his eyes toward Palladinos.
‘That’s Zweig’s *daughter*,’ he reminded him. ‘I don’t think that even a bastard like Zweig would let you cut up his daughter.’
Palladinos just chuckled. ‘Oh, really?’ he said. ‘On the contrary, I think he’d let me do *more* than that. A man who poisons his own wife wouldn’t hesitate to kill his kid as well. And it was this bitch’ – here he nodded to Ingrid – ‘whose mother he poisoned… so this bitch can be cut up.’
Hearing those words, Ingrid felt dreadful pain, a deep emotion surging up from her centre to explode right through her.
‘No,’ she whispered. ‘You couldn’t possibly know… No, I don’t believe…’
‘I couldn’t know, lady? Who the hell are you trying to kid? I work for a lot of people and all of them had dirt under their carpets. I did some work for the FBI before I worked for your old man. I was *tailing* your old man for the FBI and they gave me his file. Not all of it, of course, but enough to fill me in… and one of the reports I read was about the death of your mother. Your old man poisoned your mother, kid, and the FBI know it.’
Ingrid felt sick, torn with pain and disbelief, almost dizzy with shock at receiving confirmation of something she had tried to deny for years. She had learned through relatives, a long time ago, of the mysterious death of her grandmother in a car accident that rumour said had been arranged by Zweig; of the equally mysterious death of her mother’s parents when they opposed Zweig’s plan to marry her; and, most horribly, of the widely held belief that Zweig had been instrumental in the murder of his last wife, Ingrid’s mother – officially reported as suicide – by secretly feeding her cyanide… Now Palladino’s words resounded in her head with a shocking finality.
It was true, then, and could no longer be doubted, that her father had,

throughout his lifetime, murdered anyone who stood in his way, even including her mother. Yes, he had murdered her mother. Now she had to accept this brutal truth.

Tears sprang to her eyes before she could prevent them, blurring her vision when she tried to see Gerry and take comfort from him. She saw his flushed cheeks and raging eyes, then was drawn back to Palladino's icy grin and the murderous leer of the hoodlum holding her by the throat, with his knife at her nostrils.

'First I'll smash your specs into your eyes,' he snarled, 'then I'll slice off your nose. That's some lover you've got.'

'What are these barbarians doing in here?' the blind old man said. 'Remove this filth from my home.'

Startled, Palladinos glanced down at the *thing* on the cot. 'Jesus,' he said, 'we got a bean-bag with a talking head on top – and it's trying to *threaten* us. Hey, Rüdiger,' he added, looking at the hoodlum guarding Gerry, 'when we've finished with Remick we'll start on that freak. He should sing like a bird. And now to Miss Zweig…'

He was just turning around to give his instructions to the goon holding Ingrid when the Arab boy by the chair, incensed by the threat to the blind old man, dived at the goon threatening Gerry and sank his teeth into his thigh. The man bawled and kicked the boy aside, spinning away from Gerry, while the man holding Ingrid released her to glance over his shoulder. The Arab woman screamed, the boy rolled across the floor, and Gerry grabbed a copper pot that was resting on a table and brought it down heavily on the bawling hoodlum's head. The hoodlum dropped his pistol, staggering sideways in a daze, and as the second hoodlum raised his pistol to take aim at Gerry, Ingrid stamped brutally on his foot and started *him* bawling.

Gerry picked up the fallen pistol and started fumbling inexpertly with it while Palladinos, seeing the weapon in Gerry's hand, fled from the room. The pistol went off by accident, sending a bullet into the ceiling, and as plaster rained down upon them the other two hoodlums also fled.

Gerry rushed out of the room in pursuit, still holding the pistol, and Ingrid hurried out after him, frightened by what he might do and calling him back. She caught up with him just outside, at the front of the shop, just as he took aim with the pistol and fired wildly at the three men who were making their escape in a sand-coloured, dust-covered jeep.

Ingrid winced when the pistol fired, the noise whipping through her, then she saw one of the men jerking violently, grabbing at his shoulder, losing his balance and falling out of the jeep. He fell sideways onto the road, sending up a cloud of dust, then rolled over and yelped loudly with pain as the other two took off in their vehicle.

Gerry looked down disbelievingly at the pistol in his hand, blew the smoke away from its barrel, then hurried over to where the hoodlum was trying to sit upright, holding one hand over the bleeding wound in his right shoulder.

With a brutality that Ingrid had not seen in him before, Gerry grabbed the German, Rüdiger, by the collar of his jacket and, ignoring his yelps of pain, dragged him roughly along the road and back into the shop.

'Oh, Christ!' Rüdiger yelped. 'It hurts! *Don't hurt me no more*!'

'Shut up,' Gerry said, then turned back to Ingrid. 'Stay inside, Ingrid. I don't want you to see what I'm about to do, so don't come back in until I call you.'

'Oh, God, Gerry,' she said, 'what on earth are you going to do to him? Don't – '

'There are things I have to know,' Gerry said grimly, 'and there comes a time when civilized rules don't apply any longer. So stay outside and try not to listen. Cover your ears.'

'Oh, Gerry, please don't – '

'No, Ingrid!'

He pushed her away from the doorway, then disappeared deeper into the shop, where Rüdiger was lying. She could hear the wounded man groaning. Gerry told him to shut up. There was silence, then the clattering of copper pots falling over, then Rüdiger bawled, 'No! Oh, God, no! Not that! Please don't do that!'

Unable to listen further, Ingrid walked farther along the narrow street, stopping in front of a shop specialising in lace and leather goods. She heard another, more distant, cry of protest from the German, shuddered and covered her ears with her hands and licked her dry lips.

Obviously, Gerry was torturing the wounded man. Ingrid couldn't accept that he was capable of it. As she tried imagining what he might be doing, then remembered her father, she began to think that perhaps Gerry wasn't that much different, that inflicting pain came naturally to him.

She uncovered her ears. 'No, please!' the German bawled. '*Don't*!' Horrified, she pressed her hands over her ears once more and also closed her eyes.

Instantly, she thought of her mother lying ill in bed, of Zweig gradually poisoning her, slowly killing her and making it seem like suicide. She thought of that and *still* couldn't condone Gerry's torture of her father's German hoodlum. She recalled her father's relentless cruelty, the many times he had humiliated her, but even that didn't reconcile her to what Gerry was doing.

What Gerry was doing was wrong – and that's all there was to it.

Determined not to let him sink to the same depths as her father, she opened her eyes, removed her hands from her ears, and hurried back to the shop. However, just before she reached it, the wounded hoodlum was thrown bodily out of the doorway, into the street, where he fell on his hands and knees, glanced despairingly at her, then stood up, still holding on to his bloody shoulder, and abruptly hurried away from her.

Gerry followed him out and watched him rush off, soon disappearing into the narrow, crowded street, then he took hold of Ingrid's elbow and led her away, heading back the way they had come, between shops and stalls piled high with exotic goods and attended by voluble Arab traders. She tried to break free of his grip, to stop walking, but he just dragged her on.

'I've already said goodbye on your behalf,' he informed her, 'There's no need to go back there.'

'I don't want to go back. I just want to – '

'Be quiet,' he interjected rudely. 'Just keep walking. We have to get back to the car and then drive to our hotel. We have lots to talk about.'

'Yes,' she snapped. '*Lots*!'

She wanted to talk about how he had changed, about how he had tortured that wounded man, about how corruption bred corruption, about how he would not be able to live with himself after what he had done. But he didn't give her the chance, kept shutting her up when she tried to speak, only letting her complete a whole sentence when they were back in their hotel in central Baghdad, in their room overlooking Al-Tahreer Square, with the traffic creating a constant bedlam below them, the air humid and stifling.

'How *could* you?' she managed to get out before he cut her short again as he ripped off his sweat-soaked shirt, threw it angrily on the bed and, standing bare-chested before her, said, 'I got that bastard to talk. He sang like a bird. He told me that your dad has made some kind of pact with the Soviets, that they've finally insisted he find out just what we've learnt about Saint-

Germain. You were going to be taken hostage and, unless I played ball and continued my search for the Tuaoi Stone, thus leading them to it, you were going to be terminated. Now do you understand my main point, Ingrid? Your father, the uncivilized bastard, would even have *you* killed!'
'*Uncivilized*? And do you think you're any better? What did you *do* to that poor man? Pull out his fingernails?'
'Poor man?' Gerry looked astounded. '*What* poor man? That *poor man* and his two pals had instructions to kill you if I failed to find the Tuaoi Stone – and you're worried about *him*?'
'You tortured him! That makes you no better than he is. God, you're despicable!'
'*Tortured* him?' Gerry said, looking confused, until a mischievous grin broke on his face. 'Oh, yeah,' he continued, 'I *tortured* him alright. I submitted him to the worst torture of all. I told him that if he didn't tell me all he knew, I'd inform Zweig of his whereabouts, along with the news that he'd found us, but then let us get away. I reminded him of what Zweig would do to him when he learnt about that failure. You heard how he responded.'
Ingrid felt confused at first, then she realized what Gerry meant and the irony made the laughter bubble up and pour out of her, setting her free. Still laughing, she fell backwards onto the bed, her feet resting on the floor, and stared up at him, wanting to feel him, to touch and be touched by him.
When she understood what she was thinking, and could no longer deny it, she abruptly stopped laughing.
'Kiss me,' she said.
She was shocked by her own words – or by what they had implied – yet as he stood over her, looking down at her, she knew that she wanted him to fall upon her and crush her out of existence. He didn't quite do that, but he did at least lean over her, supporting himself on his hands, his legs pressed against her knees, his face just above her face, then he smiled like someone being given a gift and lowered himself gently upon her.
Lying upon her, he kissed her.
That kiss made her die, resurrecting her as someone else. She opened her eyes and saw his smile, his loving gaze, his bare chest, and knew that she was about to escape at last from her father's destructive influence.
'Touch me,' she said. 'Do what you want. I want to *know* what you want. I want to *be* what you want me to be. Touch me now. Touch me everywhere.'

He kissed her again, sliding his tongue between her lips. He kissed her a lot on the lips and then moved elsewhere. She felt his lips on her throat, on her shoulders, her covered breasts, and she drowned in what he was doing to her, lost herself and was reborn. When he unbuttoned her blouse and slipped it off her shoulders, she was warmed by an ethereal heat, radiated an inner light. She *wanted* to be reborn, to become someone else (a woman), and she moved herself in towards his hands and the length of his body. She felt his fingers all over, on her shoulders, breasts and hips, then they urgently tugged her denims down her legs as she kicked her shoes off. She heard the shoes fall to the floor, first the left one, then the right, and the air, which had been warm, seemed much cooler when it covered her bare thighs.
'God, I want you,' he whispered.
His words came to her like magic, igniting her desire, blowing away former inhibitions as she gave herself to him. She arched her spine, became a bridge, thrusting up to feel his hands, subsided beneath the pressure of his fingers when they pressed on her belly. Her heart started racing. She had difficulty breathing. She thought briefly of the fear that her father had instilled in her, then she smiled, her defiance like a soft flame, and let the fingers sliding along her body defeat that fear for all time.
'God, I love you!'
'And I love you, Ingrid!'
'Come inside me,' she said to him.
She hardly recognized her own voice (it was too husky and sensual) but she knew that the fire spreading through her came from her own flesh. She was aware of his fingers (where they touched her, she glowed) and felt the whole length of him against her, felt herself melting into him. She wanted him – yes, and wanted to *be* him – and when he gently rolled upon her, when he moved between her thighs, when he entered her and seemed, at that instant, to *become* her, she lost awareness of everything but sensation, *pure* sensation, and heard nothing but the languorous groaning that emerged from her lips.
'Yes!' that husky, sensual, stranger's voice said from somewhere above her.
'Oh, Gerry! *Oh, yes!*'
Then all thought slid away from her.

Chapter Twenty-One

For the next seven days, the time of creation, Gerry lost and found himself in Ingrid's body, thus recreating himself. With her spectacles removed and her long hair loose at last, with her slim but curvaceous body divested finally of its protective clothing, Ingrid was no longer a demure, childlike woman, but a voluptuous, wanton creature of the night, her lips swollen from kissing him. Her naked body was a revelation, an alien, wondrous object, an exquisitely smooth terrain that rose and fell and kept yielding surprises. He was dazzled by its revealed shape, its mesmeric hollows and curves, its ability to repose itself endlessly and keep him entranced. He loved her long legs, their curves accentuated by arched feet; was thrilled by the sight of her brown nipples on her creamy-white breasts.

'God, I love your breasts,' he told her. 'I could play with them all night. I love squeezing and licking and stroking them or just simply holding them. And I love the way you feel against my face when I'm having a rest.'

'Don't have a rest,' she responded. 'It's too early to rest.'
The mind was *not* all. He was learning that at last. What counted most was his newly discovered feelings and his body's release. He felt incandescent, in a constant state of excitation, and he wanted the glory of his love to lift him out of his mortal shell.
Her body was joined to his, moving with his to love's rhythms, and he found himself losing himself inside her, body and soul. He went winging into the ether, somewhere outside time and space, and caught a glimpse of his transcendental other half, with its heady potential. He was temporarily inviolate, beyond fear or self-doubt, and felt that he was gliding through a cosmos created by love.
The foreplay and the fulfilment soon became one and the same, a seamless merging of tactile sensation with great emotional freedom. He often felt himself dissolving, melting into her pores, becoming *her* other half, her alter ego or *doppelgänger*, even as he was conquered. What he gave, he received – he only won when he surrendered – and her body and spirit became extensions of his newly found Self.
'God,' he said at one stage, 'I can't believe this is you. I can't even believe it's *me*. I always thought we were both so inhibited. How did *this* start?'
'It just did,' she replied. 'It was bound to happen sooner or later, so finally it

did. I think those hoodlums had something to do with it; at least *my father* certainly did. I finally accepted what he'd done to my mother, and in doing that, lost my fear of him. That excited me, Gerry. I was as free as a bird. When I knew that, I also knew I wanted you and couldn't wait any longer. So, here we are.'

'I'm delighted,' Gerry said. 'I'm gonna stay here forever. You feel as soft as a bed of feathers beneath me, but you're warmer and softer.'

'I'm glowing. I'm burning. I feel like an electric lightbulb. I never imagined a man's body could do that to me. Only you. Oh, you *sweet* man!'

She nibbled his ear, stroked his flanks, curled one leg over him, licked his lips with the stem of her tongue and then kissed him passionately.

'Yes!' she whispered throatily. '*Again*!'

After that, they would make love, have a shower, eat and drink; return to bed and make love again, letting daytime turn into night and then back into day. They got their food from room-service, usually consumed it halfheartedly, and invariably returned to their passionate lovemaking, with the blinds always drawn and the room in semi-darkness, the traffic roaring and honking in the square outside the hotel as their bodies intertwined athletically, their sweat soaking the tangled sheets.

He worshipped her naked body, was obsessed with its shape and touch, lost and found himself upon it, below it, inside it; and also in her voice, her sighs of pleasure, her moist, hazel eyes.

Indeed, her eyes were a revelation – without the spectacles, they were lovely – and he studied their misty depths, their beguiling warmth and lurking wickedness, and adored them even more when they were framed by the long hair that had, at last, been set free to enrapture him further. Her long hair was erotic to him, soft as silk, fine as gossamer, and he often wiped his face with it, simply wanting to feel it.

'Your hair's fantastic,' he said. 'Lovelier than I realized at first. Don't ever pin it up again, Ingrid. Let it hang loose and glorious.'

'Oh, no!' she protested. 'Not in public!'

'Why not?'

'Men might think I was trying to attract them, and I wouldn't like that.'

So they made love again, with more confidence, even expertly, learning from one another, taking and giving what was needed, sobbing and groaning their way into a trance of pure satisfaction. Gerry felt that he was hypnotized,

enslaved by his own raptures, but his journey into sensuality, while electrifying and uplifting, gradually forced him to think of other travels and their accompanying mysteries.
He saw the stars of boundless space, disc-shaped lights in the ether, himself gliding over the green-blue breast of Earth to snow-covered mountain peaks. And there, in the mountains, in a cavern hacked from the rocks, he saw Saint-Germain and his nameless partner, both wearing white robes…
He returned when Ingrid cried out, winging back through time and space, and found himself sheltering in her arms with his heart racing madly. He was here – and also there. He was with Ingrid – and then with them. He recovered, as she did, by eating and drinking lightly, then lay back beside her on the bed, distractedly stroking her.
'Sooner or later…' he began.
'Yes, Gerry, I know.'
'Sooner or later we'll have to leave this room and go back to the search.'
She sighed. 'I suppose so.'
'No *supposing* about it. This isn't the *only* hotel room in the world – and we'll soon have to move on.'
'Where to this time?'
'I'm not sure,' he said. 'Let's discuss what we've learnt so far and work out what it means.'
This time she sighed forlornly. 'I suppose we'd better discuss what that blind old man told us,' she said, wrapped up in his arms and not sounding very interested at all as she breathed into his ear.
'Yes,' he said as his breath started quickening. 'I suppose we should.'
'You think all that stuff he told us about an earlier civilization was true?'
'Well,' he replied, again possessed of the urge to talk, sorting the facts out in his mind and wanting to check them, 'he said that civilization existed about 200,000 years ago, when Africa and India were joined by a landmass – and it *is* now known that 180,000 years ago the landmasses of Africa and India were adjacent, which is why there are startling resemblances between fossils found in both countries. And this is one of the reasons for the belief of many nineteenth-century scientists that the adjacent landmasses of that time formed a single great continent and was called *Lemuria*, after the lemur, a mammal still found in both countries.'
Ingrid took a deep breath, let it out again, then held his limp penis in her hand

to tenderly stroke it. ‘Well, *that* certainly sounds interesting,’ she said, sounding very distracted.
‘And,’ he responded, looking down in wonder as his limp penis twitched a little in her delicate hand and then started hardening, ‘I’ve just remembered something that has certain parallels to what that blind old man told us – and *he* certainly wouldn’t have known about this.’
‘Oh,’ Ingrid murmured. ‘Really?’
‘Yes,’ Gerry said, becoming excited for two reasons. ‘According to Edgar Cayce, the famous American clairvoyant, Atlantis was a vast island in the Atlantic Ocean, even bigger than Europe, extending from the Sargasso Sea to the Azores and suffering three periods of destruction, from 15,600 BC to 10,000 BC, the first two periods splitting a single island into three smaller islands, the third destroying everything.’
‘Well, that certainly matches what the old man was saying,’ Ingrid murmured huskily, bending over to breathe warmly upon him and greatly distract him.
‘Right,’ he managed to say while feeling breathless. ‘And according to Cayce, that Atlantean civilization was highly developed and possessed some kind of *crystal stone* for trapping and utilizing the rays of the sun. He also claimed that the Atlanteans date back as far as 200,000 years – which would certainly place them in the joined continent of Africa and India 180,000 years ago – and that they were very headstrong, had great powers of extrasensory perception and telepathy, and also had electricity and had invented the airplane.’
‘Not an *airplane*, dear – it’s an *aeroplane*,’ she corrected him, then, still playing with his penis and obviously agitated, murmured, ‘God, I feel like a *whore*… and I don’t give a damn.’
She proved it by leaning over him, breathing upon him, kissing him, and then he lay back, closed his eyes and surrendered to what she was doing.
‘So you think that Cayce’s *crystal stone* was actually the pyramid-shaped stone that we’re all hoping to find?’ she asked him, running her tongue lightly down his chest and onto his belly.
‘Well, I’ve just remembered – damn it, why didn’t I remember before? – that it was Cayce who actually *visualized* that early Atlantean civilization and subsequently claimed that the source of their magical energy was a, quote, *terrible crystal* or *Tuaoi Stone,* unquote. He also said that eventually it was so misused by that increasingly aggressive civilization that it brought about their

final destruction in 10,000 BC.'
'Your belly button's so sweet,' Ingrid murmured. 'I could lick it all day.'
'What's *really* interesting,' he managed to continue, even though he was finding it difficult to breath properly, 'is that Cayce also prophesied that the Atlantis that disappeared under the waters of the Azores and the Sargasso Sea would rise again in 1968 or 1969…'
'Fascinating,' Ingrid murmured.
'… and in 1968, long after Cayce's death, airline pilots photographed what appeared to be underwater buildings in that very area – off the coast of Bimini, to be exact – and undersea explorations since then, in that same area, have uncovered on the ocean floor what appear to be the remains of ancient roads, walls, pyramids and even circles reminiscent of the circular walls of Plato's Atlantis.'
'Mmmm,' Ingrid murmured, sitting up a little and looking disconsolate.
'So it's possible that a civilization *could* have existed 200,000 years ago in the African-Indian continent, migrated to what was then the landmass between the Azores and the Sargasso Sea, and then been destroyed in approximately 10,000 BC, as the old man believed.'
'And what about Plato's Atlantis, which was destroyed in about 1,500 BC?' Ingrid asked, rolling on to her back and pulling him gently, but insistently, upon her.
'Well, ' Gerry replied, breathing deeply and finding it hard to concentrate, 'Plato may have been right about that *particular* Atlantis. The existence of a few ancient maps, all since proven to be authentic, has offered substantial proof that there was a worldwide maritime civilization thousands of years before the Egyptians or Babylonians. This being so, if, as the old man claimed, the highest of the high priests of the Atlantis civilization *did* flee before its destruction in 10,000 BC, they would have had no great difficulty in sailing from the Azores or the Sargasso Sea to the islands of the Aegean.'
'I like lying beneath you,' Ingrid said. 'I like being your bed.'
'And according to Plato,' he continued, trying desperately to ignore her, 'who claimed that the story of the lost continent of Atlantis was originally told to Solon by *Egyptian* priests, the civilization of the Atlantis located beyond the Pillars of Hercules – in other words, in the Aegean Sea – built their major city in concentric rings around a temple of the sea-god Poseidon, shaped like Santorini, in fact, and they accomplished great feats of engineering and

architecture, then conquered North Africa, including… *Egypt*!'
'Which would explain why,' Ingrid added in an urgent manner, 'if a select few of that Aegean Atlantis *had* removed the Tuaoi Stone from its leading temple and fled with it *some* time after 10,000 BC, when they first arrived in the Aegean, they *could* have taken the stone to Egypt and there built another temple of learning and astrology – the Great Pyramid, constructed in 2170 BC – and placed the pyramidal Tuaoi Stone safely on its peak before the destruction in 1,500 BC of the civilization of the Aegean, from which they had also fled.'
'Right,' Gerry said. 'And they've since taken the Tuaoi Stone somewhere else… to a location *we're* trying to find.'
Ingrid sighed, as if losing something precious, then gazed forlornly at the ceiling while saying, 'I wish we could stay here forever and forget this whole business.'
Yet they both knew it was impossible, wishful thinking, an unrealizable fantasy, and as the fifth and sixth days passed, as the need for sleep returned to normal, they talked more and more about Saint-Germain and their search for the missing Tuaoi Stone. It seemed they were addicted to it, or, at least, trapped by past experiences, now more desperately needing to know what it all added up to. And so despite their personal feelings, no matter how much they wanted to touch each other and be touched, they knew by the morning of the seventh day that they were ready to move on.
How surprising, therefore (though utterly predictable with hindsight) that early that morning, when breakfast had been left outside their door by room-service, Gerry found on the tray, when he set it down on Ingrid's lap, an envelope containing air tickets for flights from Baghdad to Heathrow, London, and from there to Tel Aviv, Israel. Also in the envelope was a postcard showing the Temple of Solomon in Jerusalem, and a calling card on which was scribbled, in that increasingly familiar, elegantly flamboyant handwriting: *Compliments, St Germain*.
'Please note,' Gerry said. '*Saint* Germain.'
Thus reminded that both of them were on a quest more important than their own immediate happiness, that they were still being watched, that the joy they had found together could not prevent what was to come, the naked, dishevelled and surprisingly voluptuous Ingrid pinned up her long hair, put on her clothes and spectacles, lowered her head demurely, and let Gerry lead

her away from the rumpled bed, out of that sweltering room, back into the material world and its numerous mysteries.
They caught a cab to the airport.

Chapter Twenty-Two

As he walked out of Baghdad International Airport with Elena and Hans, Zweig had only one thought in his mind: to have a talk with the three hoodlums who had, according to his Arab spies, let Ingrid and the American escape once more from their clutches.

‘And you still have those three imbeciles under lock and key?’ he asked his Baghdad contact, as he impatiently waved Elena and Hans into the back of the limo.

‘Yes, sir,’ the Arab replied. ‘We have them in a farmer’s house just outside al-Hillah, where all three were hiding. Naturally, when they asked for a doctor for the wounded man, the farmer knew that something was wrong and informed the police at al-Hillah. One of the policemen then got in touch with me, and that’s how I found them.’

‘You did well.’
‘Thank you, sir.’
Clambering into the back of the limo, Zweig sat beside

Elena, thus placing her in the middle, between him and Hans, the former chewing gum and fanning herself with a lace handkerchief, the latter simply gazing out the window, as if lost in thought.

‘I don’t know why *I* had to come,’ Elena whined. ‘You *know* I can’t stand this heat and dust.’
‘Please be quiet,’ Zweig said, again taking note of her growing insolence.
‘The heat and dust are unavoidable, but certainly bearable.’
‘So why couldn’t I stay on the boat? Or at least on the island?’
‘Don’t you *want* to see exotic Baghdad?’
‘It’s just another noisy city.’

‘What would I do without you at nights?’
‘Find a whore,’ the whore replied in a knowing manner. ‘I’m sure your hotel would provide one.’
He held his anger in check and settled into his seat as the Arab took the seat beside the driver and told the latter to start driving. As the limo sped away from the airport, heading for al-Hillah, Zweig puzzled over the whereabouts of Ingrid and Gerry Remick, and started feeling distinctly nervous at the thought of the possible repercussions should they not be found. Kuragin, for a start, would not take kindly to their loss; and would, indeed, withdraw Soviet aid, leaving him defenceless.
He would be ruined overnight.
Yet what could he do? He couldn’t work out what was happening. If Saint-Germain actually existed (and Zweig’s own bizarre experiences indicated that he did) and if, as it seemed, he was the keeper of the Lodestone, or Tuaoi Stone, then why had he protected Ingrid and her American over the past few months?
It didn’t make sense.
Gazing out the window of the speeding car, observing the dreary flatlands and the colourless Euphrates river, which appealed to him not at all, he thought with growing rage and humiliation of what Ingrid had done to him. The ungrateful whore. A frigid bitch like her mother. He had raised her in luxury, educated her at the best private schools, sent her to the finest sanatoriums for her emotional problems – and she had repaid him by stealing his money and running away with her American boyfriend.
You could never trust women. He had always understood this. Although needing them, he had never really liked them, had always sensed their dislike of him, and had realized at an early age that at heart they loathed sex and only tolerated it in order to get their own way – just like Elena.
It was always the women. Deep down, he knew that. He’d had trouble with women all his life, particularly with the older ones, the mothers, who clearly could sense more than their daughters did. No mother had ever liked him. That’s why he had killed a few. He had certainly arranged the deaths of his first wife *and* her parents (that bitch mother who had despised him) and, later, did the same for Ingrid’s grandparents, before killing her mother. He had done it for money, to obtain their inheritances, but had doubtless also done it as an act of revenge against women in general. Every woman he had known

had eventually turned against him, forcing him to destroy them.
And now Ingrid. God, yes! Just like all the others. Frightened of him, even more frightened of sex, and possessed of a whore's urge to steal from shops, not to mention from him. A pyromaniac as well.
She hated him. He knew that. She had always done so. Like her mother, she had feared *and* envied his masculine strength, then blamed him for her lack of self-esteem and growing neuroses. He should have killed her, just as he had killed her mother, to put himself out of misery.
Certainly, when he finally caught up with her, that's what he would do.
Her *and* the American.
'Hey, Hans!' Elena shouted. 'Close that window! The wind's blowing my hair about.'
'Yes, Elena, of course.'
Hans did as he was told, promptly rolling the window up. Taking note of the fear that was always in his eyes, Zweig recalled that day in Eforie Nord, in the thermal treatment centre, when he had made Hans go down on his knees to offer obedience. He hadn't meant to go that far, still wondered why he had done so, and could only conclude, glumly, indeed with increasing dread, that it had been caused by his age, by his loss of potency in *normal* sex, and by his subsequent need to make up for that loss, no matter the means. Thus, Hans on his knees, Elena in Nazi outfits, his own nostalgic memories of his Hitler Youth comrades, his increasingly romanticized thoughts of the glorious Third Reich.
He wanted his past back.
Shuddering, he turned away, looked straight ahead instead, stared at the empty road cutting through the arid flatlands and remembered again that Hans could use their moment of intimacy against him, if only with idle talk. Yes, his enemies were everywhere…
Such gloomy thoughts, which had increased in recent weeks, continued to torment him until, an hour later, the limo pulled up outside a crumbling, mud-and-stone farmhouse, standing near the banks of the Euphrates river. There were a few goats wandering loose, some chickens, a couple of cows. The air smelt of wild flowers and manure, was stirred by a faint breeze. Two armed Iraqi policemen were guarding the front door of the farmhouse, and a third one, a sergeant, as fat and slovenly as the other two, emerged as Zweig struggled out of the limo, relieved to be doing so.

‘I’m not getting out,’ Elena said. ‘I’m not getting goat shit on my new shoes, so I’ll just wait in here, thanks.’
‘Of course,’ Zweig said. ‘Naturally.’
Taken aback once more by the extent of her insolence, he turned away from her, held his anger in check, then with Hans and the Arab driver approached the police sergeant and his armed minions.
As soon as the driver had introduced him to the police sergeant, he asked if his three men were still alive and well in the farmhouse.
‘Naturally,’ the potbellied, pleasant Iraqi sergeant replied. ‘We had to discipline them once or twice, but they’re still alive.’
Zweig had to grin at that. ‘And my daughter and her American boyfriend? Any news about them?’
‘Yes. One of our men has just called from Baghdad International Airport, telling us that your daughter and the American took a flight to Heathrow, London, shortly after you landed. We have also learned from hacking into the airline computer systems that they have been booked onto flights from London to Tel Aviv, scheduled for one week from now.’
Zweig couldn’t believe his ears. It was too painful to be true. He had missed them by a matter of minutes and now they were well out of the country.
‘Tel Aviv? *Israel*?’
‘Yes, sir.’
Zweig suddenly felt bewildered, hot and bothered, slightly nauseous, but kept a firm grip on himself and displayed no emotion.
‘Very good, sergeant. You’ve done an excellent job. Now I suggest that you leave with your men and let *me* handle the prisoners. Believe me, I will deal properly with them.’
The Iraqi sergeant picked his nose and flicked something off his finger, then frowned to display his disapproval. ‘I’m afraid I cannot permit – ’
‘Yes, yes,’ Zweig interjected, waving his hand impatiently. ‘My man here will pay you for your troubles and for turning a blind eye. Now take the money and go.’
Hans stepped forward, took the police sergeant aside, slipped a fat envelope into his hand and whispered into his ear. Looking a lot happier, the sergeant pocketed the envelope, slapped his fat belly, spat on the ground, and waved at his two uniformed assistants; then all three of them, after scrambling into their battered jeep, waved goodbye and were driven away, soon disappearing

in clouds of billowing dust.
When the police had gone, Zweig nodded at his Arab informer, who withdrew a pistol from inside his jacket, cocked it and entered the farmhouse. He could be heard barking commands, then, a few seconds later, the three hoodlums emerged, obviously having been kicked out by the Arab holding the pistol. Two of them looked pleadingly at Zweig through blackened eyes, while the other, badly bruised, also with blood caked around the bullet hole in his shoulder, groaned weakly and fell into the dirt.
'Pick that miserable wretch off the ground,' Zweig said to two of his men, 'and support him between you.'
The two men did as they were told, jerking the wounded man up onto his knees and, as he groaned louder, supporting him by placing their arms around him, under his armpits. He hung limply between them, blubbering pathetically, his head bowed. Studying the other two, Zweig was pleased to note that Louis Palladinos, who had once been hired by Colonel Kuragin to keep his eye on Zweig, had lost his aplomb, and, with his face badly bruised by the Iraqi police, was a sorry reflection of the man he had formerly been.
'Tell that bastard to hold his head up,' Zweig ordered, referring to the wounded man, Rüdiger.
'He can't,' Palladinos said. 'He's been losing blood for days and is nearly unconscious.'
'Nearly unconscious, is he?' Zweig said. 'Well, we'll soon fix that.'
Stepping forward, he grabbed hold of the wounded man's bloody shoulder, squeezed it tightly and bit into the area around the wound. The man screamed in pain, quivered like a puppet on a string, and then raised his head, opening glazed, tearful eyes.
Zweig smiled at him and stepped back a little.
'So,' he said. 'Now that you're all awake and attentive, let us commence…'
He stared at each man in turn. 'You have failed me. All three of you have failed me and I want to know why. I send you out with the relatively simple task of locating two individuals, we have helpful operatives in every city you've been to, we have telephones and bugging devices and numerous informants – and *still* you managed to lose your quarry. You were supposed to be in charge, Palladinos, so maybe *you* should explain.'
'Yes, sir, of course. Whatever you say. Naturally.' Palladinos wiped sweat from his battered face and licked his parched lips. 'It wasn't our fault,' he

said. ‘We were taken by surprise. We followed your daughter and the American into the shop of a blind old man, one without arms and legs, known locally as a clairvoyant, a seer, located in the bazaar near the Mosque of Kadhimain, north of Baghdad, clearly discussing Saint-Germain and the Tuaoi Stone. We were about to beat the truth out of them when a large group of men burst into the shop and started beating *us* up.’
‘Oh, really?’
‘Yeah,’ Palladinos said, obviously lying through his teeth. ‘As I said, it was a pretty large group, probably Saint-Germain’s men, and they attacked us and then chased us from the shop. We managed to make it to our jeep, but then, when we were driving away, one of them shot at us, badly wounding poor Rüdiger, as you can see.’
Poor Rüdiger, still holding his bloody shoulder, nodded his battered head.
‘And then?’ Zweig asked.
‘Well, sir, the rest you know. Determined to look after Rüdiger, refusing to leave him alone while he was wounded, we stayed with him in this place and sent for a doctor – but instead of going for a doctor, the farmer went to those cops and they informed you of our whereabouts before we could do so ourselves, which is what we intended to do, believe me.’
‘I see,’ Zweig said. ‘So you were going to get in touch with me, just as soon as your friend, Rüdiger here, had received medical attention.’
‘Exactly,’ Palladinos said, grinning with relief. ‘The minute Rüdiger was fit enough to be moved, we were going to get a plane directly to you, and then tell you precisely what had happened.’
‘An honourable thing to do,’ Zweig said. ‘Almost *noble*, in fact.’ He turned his head aside to glance out over the broad, muddy expanse of the Euphrates river, remembered that he was standing in the cradle of civilization, received no ecstatic feeling from that particular knowledge, so said, ‘Wasn’t that noble of them, Hans? Do you not agree?’
‘Yes, sir,’ Hans said, nervous as always. ‘Very noble, indeed.’
Zweig nodded judiciously, took a deep breath, then turned back to Palladinos, viciously slapped his face, and hissed, ‘You lying bastard! No group of men attacked you! My Arab friends went to the blind old man’s house and were told the true story. No group of men attacked you and chased you out of there. You let my daughter, the American and an Arab, a mere boy, *a child*, put you to flight – and were in fact shot by the *American* as you made your

escape.’
‘No, sir! Please let me – ’
Zweig slapped his face again. ‘Shut your lying mouth! You were put to flight by a bunch of amateurs! And only returned to the bazaar when my daughter and the American had gone, because you didn’t want anyone to find *this* wounded idiot. Then, when you found him, wandering about in a daze, nursing his bloody shoulder and whimpering pathetically, you picked him up and drove out of al-Hillah, then on to this farmhouse, hoping to escape from my wrath by later sneaking back to Baghdad and taking an airplane out of the country – but *not* to me.’
‘No, I – ’
‘Shoot this pig! *Shoot him now*!’
‘No, no, please don’t! *No*!’
Palladinos was still bawling his protest when Zweig cut him short by slapping him sideways into the dirt. The Arab, moving quickly, stepped forward, leaned over him, placed the barrel of the pistol against his head, and pressed the trigger. The pistol jerked in his hand, blood and brain matter splashed him, then Palladinos twitched once and was still.
As the wounded Rüdiger rolled his eyes and his friend burst into tears, the Arab grabbed the lifeless Palladinos by the collar of his jacket and dragged him like a sack of maize across the dusty earth. After kicking the body to make it roll down the incline into the river, he returned to aim his pistol at the other two hoodlums. Zweig, feeling slightly out of control, glared fiercely at them.
When the wounded Rüdiger stared at him with glazed eyes, Zweig offered a soothing smile.
‘Come, my friend,’ he said. ‘Like me, you are a German. Please tell me what happened after the other two fled in the jeep, leaving you to the mercy of my daughter and her American boyfriend.’
Rüdiger bit his lower lip, shuddered with pain, and mumbled, ‘It was terrible, Herr Zweig. Really terrible. That American, he was a demon. He dragged me back into the shop, submitted me to torture, and interrogated me as to why we were pursuing him. I told him nothing, Herr Zweig.’
‘Nothing?’
‘I swear it!’
Zweig leaned forward to again grab hold of Rüdiger’s wounded shoulder.

Rüdiger screamed and jerked convulsively, but Zweig slapped his face, bawled at him to be quiet, then, while he shuddered and whimpered pathetically, stepped back and studied him.
'Now what did you *really* tell him?' he asked.
At great length, and with much sobbing and whimpering, Rüdiger managed to confess that he had told Gerry Remick all he knew, which wasn't all that much, being essentially the sample fact that Zweig had originally been letting Ingrid and her American run free in the hope that they would lead him to Saint-Germain, but that the Soviets had then insisted that he capture Ingrid and force the American to continue the search for the Tuaoi Stone.
'And that's *all* I told them, Herr Zweig. That's all I know.'
Utterly outraged but not wishing to show it, Zweig placed a hand gently on the wounded man's good shoulder, shook him affectionately, then told him to stand up beside his companion. When he had climbed to his feet and stood trembling in front of Zweig, the latter gave both men a warm smile, nodded and said, 'You are men. *German* men. And should be treated as such. You should be accorded the respect and dignity reserved for all soldiers.' Then, turning rather sadly to Hans, he said, 'Execute them.'
Without a word, the increasingly pale-faced Hans nodded at the Arab with the pistol. Also without a word, and ignoring the sudden outbreak of entreaties from the two doomed men, the Arab raised his pistol and shot each of them in the head, then dragged their bodies, one by one, to the bank of the river and kicked them down into the muddy water.
Zweig returned to the limo without a word and clambered in beside Elena.
'Are we going back now?' Elena asked, her face a picture of boredom.
'*Ja*,' Zweig replied. 'And then we're flying with false passports to Jerusalem, via London, for a little vacation.'
'Jesus, why *there*? That place is knee-deep in Yids.'
'That much I know.'
He sighed in despair, wiped the sweat from his face, and looked out the window as Hans slipped in the other side, the Arab took the seat beside the driver, and the limo moved away from the farmhouse, churning up clouds of dust and sand as it headed back to Baghdad.
As they travelled across the flatlands, past goats and Arab farmers, moving parallel to the broad, muddy swathe of the Euphrates river, which had continued to flow while mighty civilizations rose and fell, Zweig

contemplated time, wondered what it really was, tried to separate his past from the present, but gave up in defeat. The glorious days of his youth were as real to him as the present, the great dramas of the Third Reich and its aftermath as vivid as yesterday. Yet because of Saint-Germain he had found himself soaring through time and space, to view first the stars of the cosmos, then unknown, snow-capped mountains

What did all that mean?

He recalled his experience in the park in Bucharest, could not forget the bizarre events experienced by his men, and now knew that in his pursuit of Saint-Germain he had found the ultimate enemy.

Victory over the ultimate enemy was the greatest victory of all, and the Tuaoi Stone would be but the icing on that particular cake. Yet there was more to it than that – he needed the Tuaoi Stone for himself – to own it was to possess the whole world, and even, if what he had heard was true, to find immortality.

He desperately wanted that. He was growing terrified of old age. His erections were less frequent, usually hardly worth mentioning, and his other ailments were multiplying every day, no matter what he did to keep them at bay. Yes, he was growing old, going to seed, *decaying*, and he dreaded that more than anything else on Earth, could not abide the thought of mortality, to be one of the common herd.

Hitler could have been a god, inviolable, immortal, but instead had been betrayed by his flesh and the facts of mortality. But he, Zweig, could do what Hitler had only imagined: conquer not only the Earth, but also the mysteries of time and space, and through them, the secret of life, and… *immortality*. God, he hungered for that.

Yet he was being thwarted. His own daughter had turned against him. That bitch and her surprisingly bright American were making a fool of him. Clearly, they were doing so with Saint-Germain's help. And now SaintGermain's bizarre scenario was propelling him, Zweig, along with his daughter and her American boyfriend, towards the ultimate test.

'Jerusalem!' He sighed. 'My hell on Earth! Why is God punishing me?'

God did not answer.

Chapter Twenty-Three

As he watched them walk barefoot into the cool interior of the Mosque of Omar, or the Dome of the Rock, in the Noble Enclosure in the Old City of Jerusalem, Ibrahim Dayieh thought that the young lady and her American boyfriend seemed just like any other tourists.

Wondering if they knew that they had been chosen, or if they were being tested in ignorance, he followed them as they made their way around the magnificent temple, under the brilliantly coloured tiles and Koranic inscriptions of the great dome, past marble panels in muted pastel shades, and across floors decked with oriental carpets, to the railing around the mosque's focal point: the Rock. There, surrounded by other whispering tourists and Islamic worshippers, they gazed upon the rock from which Muhammad – blessed be His name – was said to have ascended to heaven and which even now contained the unmistakable imprint of a human foot.

The young lady and her American boyfriend stared at it, as if in a trance. Observing the couple, Ibrahim stroked his grey beard and started feeling as old as he was, which was close to seventy. As he padded barefoot alongside the wall of the Mosque, in order to obtain a better look at the couple whom he had been told, by Saint-Germain, would enter the Mosque at exactly this time, he realized that he was suddenly feeling old because of his understanding that his time had come. His new sense of *age*, then, was not at all unpleasant, but was actually filling him up with the peace of contentment. He was proud that he had been chosen and would now soon be called; would soon become one of that secret, illustrious line that includes Muhammad, Moses, Abraham, Jesus, Buddha, Rama Krishna, Nebuchadrezzar, and many other of the world's most noble men, from both East and West. Yes, the present guardian of the sacred stone, the emissary, St Germain, had come to him years ago, in the middle of his meditation, to begin that other, more relevant education and show him the way. He had been chosen as an adept, as one of the immortals, and soon would be relieved of his mortal shell and find the bliss of transcendence. His sudden ageing, then, was not something to be feared, but a cause for rejoicing.
Stopping parallel to where the group of tourists had gathered in front of the sacred Rock, he looked surreptitiously at the girl and her American boyfriend.

He had always found Western women to be thin, pale and insipid in character, but this one seemed even less impressive than most. She was much too thin, had small breasts, was stoop-shouldered; her hair was piled untidily on her head and she wore a pair of unattractive spectacles.

In truth, he couldn't imagine what the young American saw in her; nor could he imagine her *or* the American, in his scruffy jacket and blue denims, even being *considered* by the Master. However, St Germain had told him to contact them and that's what he was doing.

Standing beneath the superb stained-glass windows and black-and-gold mosaics, the couple had turned their attention to the small tabernacle at the far end of the Rock, which contained a few hairs from the head of the Prophet. Ibrahim stared at them, willing them to sense his presence, and eventually the American turned his head and looked directly at him. Ibrahim smiled at him, then turned away and headed for the exit.

As he walked in bare feet across the oriental carpets, past jostling Christians and Moslems kneeling in prayer, he knew that the girl and her American would be close behind him. Still smiling, he thought of how St Germain had appeared to him that morning, as if in a dream, but in his essence very real, to inform him that the time for his transcendence had come, that he would leave the Earth this day, but that before this great event came to pass he had one final earthly duty.

A young lady and her American friend had been chosen and were being tested. They had reached the Seventh Station – this Great Mosque and Temple of Solomon – and had been told that they would be recognized and contacted by someone. That someone was Ibrahim.

He would tell them what they needed to know… and then death would release him.

Stepping from the cool shade of the interior of the Mosque into the blazing light and heat outside, he slipped his feet into his sandals and turned back to face the entrance. The girl and her American appeared soon enough, blinking against the brilliant sunlight. When they had put their shoes back on, they both stood up and stared intently at him. After glancing at one another in a questioning manner, they stepped forward and stopped directly in front of him.

'You're the one we're supposed to meet, aren't you?' the young American said.

‘Yes,’ Ibrahim replied, knowing without doubt who they were and so speaking with confidence.
‘We saw you looking at us.’
‘Of course.’
‘How did you know it was us you were looking for?’ the girl asked.
‘I was shown your likeness by our Master, St Germain, when he asked me to speak with you.’
‘I’m Gerry Remick,’ the American said, ‘and this is Ingrid – ’
‘Your names are not important,’ Ibrahim said. ‘Come, walk beside me.’
He led them away from the octagonal Mosque with its gold-and-polychrome tile-work, across the flat stones of Solomon’s Platform, the El-Haram-es-Sharif, towards the sealed Golden Gate in the wall of the Old City, not unaware of the great history around him, of the ghosts of the centuries rising up from the hot, sun-scorched stones.
‘It is believed that right here,’ he said, pointing at the ground, ‘is where Abraham prepared to sacrifice his son, Isaac. The Prophet Muhammed, as you doubtless know, was said to have ascended from the Rock enshrined in the Mosque. Here Solomon reigned, the Romans had their temple to Jupiter, Herod built his fortress, Pontius Pilate condemned Jesus to death, and the Crusaders tried to convert us with violence. This place is a fitting end to your journey. Now your journey begins.’
‘That’s a contradiction in terms,’ the American said.
‘No, my son, it is not. All endings are the beginning of something else. Thus the circle is given shape.’
As the sealed Golden Gate loomed over them, he turned north towards the Antonia Tower, where Pontius Pilate had condemned that other adept, Jesus, to death. The tower cast its long shadow on the flat stones, obscuring the milling Arabs, Jews and tourists.
‘So,’ Ibrahim said, ‘what do you wish to know?’
‘Every time Count Saint-Germain sends us to see someone,’ the American said, ‘they ask us what *we* want to know, but we don’t know what to ask.’
‘He is not *Count* Saint-Germain,’ Ibrahim felt obliged to correct him. ‘He is a saint – *Saint* Germain – and if, as you say, you do not know what to ask, you have come a remarkably long way on no information.’
‘Okay, so I’ll ask,’ the American said, grinning with considerable charm. ‘Is it true that this meeting with you marks *some* kind of end to our journey?’

‘That is correct. You have managed to make your way to the seventh of the Seven Stations. After this, you will commence *another* journey, east or west, one the right way.’
‘And one the wrong way?’
‘Correct.’
The American glanced at the girl beside him and she smiled in return. In that smile, which illuminated her drabness in a magical manner, Ibrahim saw the light of her love and blossoming sensual self.
Clearly there was more to this couple than met the eye… a mutual affection and trust, a spiritual innocence. Perhaps this was why…
‘What are the Seven Stations?’ the girl asked. ‘Are they the Seven Wonders of the World?’
‘That is a self-evident fact,’ Ibrahim replied, warmed by her smile. He sensed a certain mischief in her. This suggested that she might have more spirit than initially he had given her credit for.
‘What isn’t self-evident,’ the American said, ‘is why we were sent there.’
‘And *here*,’ the girl added.
‘You were sent to be tested,’ Ibrahim said. ‘I do not know why or how. I only know that if St Germain arranged it, it is not without purpose. Obviously, since you have managed to come this far, you have been satisfactory.’
‘Satisfactory for *what*?’
‘That is not for me to say. Only St Germain can know that. I only know that you were sent to the Seven Stations as to the seven rungs of a ladder. If you fail to climb above a certain rung, you can only descend again.’
‘So, what were we tested for?’
‘For belief and self-belief, faith and courage, for the will to continue. It is important that your motives be as pure as the love you have for each other.’
The young lady blushed at that, lowered her eyes, squeezed the hand of her man. Both of them, Ibrahim observed, not without a certain amusement, looked much younger at that moment than they were.
‘Our motives for *what*?’ the American asked, almost aggressively.
‘Your motives for wishing to find the Tuaoi Stone – since the Tuaoi Stone can only be shared by those with pure hearts.’
Taking the steps down from Solomon’s Platform, they started along the crowded path that led alongside the norther wall of the Old City to the nearest exit, which was via the Lion’s Gate. They were hemmed in by colourfully

robed Moslem traders and tourists of all religious denominations, yet seemed very alone.
‘We passed all those tests?’
‘So far, young lady.’
‘He tested our love and commitment?’
‘And the depth of your purity.’
‘Excuse *me*,’ the American said sardonically, ‘but I just don’t *get* this. I mean, *I’m* not particularly pure, I believe in little, and my love… Well,’ he added tentatively, glancing sideways at the young lady and blushing as she had previously done. ‘I mean, that’s natural, isn’t it?’
‘Romantic love is generally a form of self-deception,’ Ibrahim said, ‘that cannot survive for too long. You are pure at heart – both of you – more than you know… and love of this kind is quite rare.’
‘And belief?’
‘You do not know you believe, but it is part of your nature. Your belief runs very deep. You have faith in the ultimate goodness of Man – and that, my friends, is the only true belief at the heart of existence.’
They went through the Lion’s Gate, thus leaving the Old City, stepping out between two walls of ancient stone lined with gypsy beggars, mostly children, and Arabs selling their wares to tourists. Across the Jericho Road was the Valley of Kidron. Beyond it and the Moslem Graveyard within it, they could see the church of Gethsemane on the lower slopes of the Mount of Olives, with the golden spires of the Russian Orthodox church gleaming through the branches and leaves of light-green olive trees.
‘Assuming that what you say is true,’ the American said, ‘that we were in fact tested and have so far passed every test, why were we tested in those particular places? Why not where we were living our normal lives?’
‘Those places where you were tested were themselves past of the test. It is the knowledge of the significance of those places that will make you begin again.’
‘The end of this journey and the beginning of another?’
‘Yes.’
‘Then what’s the significance of those places?’
‘I cannot tell you what you’ve already learnt.’
‘We haven’t learned anything.’
‘You have.’

‘Oh?’ the American said, raising a questioning eyebrow.
‘Yes,’ Ibrahim said. ‘You have simply not accepted this fact. You have discussed it together, but so far not managed to recognize it. You have talked together about it, without actually knowing you were doing so.’
‘If we’ve already learnt it, you can repeat it.’
‘That is so.’
‘Then repeat it. Please *tell* us!’
The American was clearly exasperated, making Ibrahim smile again. ‘I can only tell it when you ask the relevant question – and that question you know.’
The American stopped walking, stared at him with increasing exasperation, then raised his hands and shrugged his shoulders in despair. Ibrahim started forward again, but then the girl darted in front of him, making him stop.
‘Why are those particular sites – the Seven Wonders of the World – representative of your so-called Seven Stations?’
Ibrahim nodded at her. ‘Yes,’ he said, ‘that’s the question.’
‘And the answer?’
As the American looked in a surprised manner at the girl he clearly loved, Ibrahim took hold of the girl’s elbow, gently tugged her in beside him, then continued along the Jericho Road, with the American falling in at his other side.
‘Did you ever learn about magic squares when studying mathematics?’ Ibrahim asked the American, who, in a rather naive way, seemed highly intelligent.
‘Sure,’ the American replied. ‘I used to have great fun with them, and often, when still in high school, tried inventing my own.’
‘I don’t know what they are,’ the young lady said, obviously put out by her own ignorance.
‘Magic squares,’ the American explained to her, ‘are arrangements of numbers, usually integers, in a square grid, where the numbers in each column, and the numbers that run diagonally in both directions, all add up to the same number. The square, or block, has the same number of rows as it has columns. In a so-called *magic* square, then, you should be able to add any three lines up, down, or diagonally, and you’d always get the same number as your sum total. They’re mathematical freaks that are mostly found in puzzle books or used as the basic structure for crossword puzzles.’
‘Correct,’ Ibrahim said. ‘However, they were rightly regarded by the

mathematicians of antiquity as numerical illustrations of cosmic laws. They believed, again rightly, that the numbers of magical squares were cosmological keys to the mysteries of the universe, and so seven of those squares became traditionally attached, each to a particular planet in our cosmos.'

'I remember that,' the American said, hardly able to contain his growing excitement. 'The smallest of the seven is the Square of Saturn, which has nine numbers, totalling forty-five, but arranged so that no matter how any individual block of three numbers is read – diagonally, horizontally or as columns – the sum is always fifteen.'

'You have a good memory,' Ibrahim told him as they left the Jericho Road and headed south, with the wall of the Old City on their right, the Valley of Kidron and the Silwan village falling away to their left. 'And what you both have sensed, but not yet fully recognized, is that the sites you have visited, the Seven Wonders of the Ancient World, form an astrological system, with each of the sites representing a centre of cosmological influence, as revealed by their relevant squares. The original buildings, as they stood, were actually instruments for the control of a particular aspect of cosmic energy, and their construction was based firmly on the dimensions suggested by the numerical pattern of their individual magic squares… Now think of the beginning as an ending, of the first as the last, and relate this to the places you have visited.'

'The first place we visited was the Great Pyramid at Giza,' the American said, looking directly at Ibrahim, his eyes growing brighter with revelation while the girl frowned beside him. 'And that's where we received the first digit of the magical number 1746.'

'Exactly,' Ibrahim said. 'And since the beginning is the ending, let us see what your travels have revealed.'

'Yes, let's,' the American said.

'The Temple of Diana, or Artemis, at Ephesus, represents the Square of the Moon,' Ibrahim informed him. 'The Colossus at Rhodes represents the Square of the Sun. The Temple of Jupiter, or Zeus, at Olympus, represents the Square of Jupiter. The Tomb of Mausoleus, in Turkey, represents the Square of Venus. The Towers and Hanging Gardens of ancient Babylon represent the Square of Mars. The Temple of Solomon, right here in Jerusalem, represents the Square of Saturn. And finally, taking the beginning as the end, the pyramids of ancient Egypt, themselves represented by the

Great Pyramid of Cheops in Giza, represent the Square of… *Mercury*.'
He laid particular emphasis on the last word – and was pleased when the young American responded without hesitation: 'The Moon, the Sun, Jupiter, Venus, Mars, Saturn and… *Mercury*. So all of those ancient monuments, as well as representing astrological systems and being used for astronomy, were also instruments of… *alchemy*.'
'Do not doubt your own wisdom.'
Smiling, Ibrahim led them through the Dung Gate, past Arab traders, armed Israeli soldiers, and the mandatory hoards of tourists, then on in a circular direction back around the Western Wall, better known as the Wailing Wall, and into the narrow streets threading through the Jewish Quarter, towards the Street of the Chain.
The American had seemed deep in thought and now he stopped walking.
'Okay,' he said. 'So the answer to the riddle is in *alchemy*. Now what – ?'
Ibrahim waved his right hand, cutting the American off in mid-sentence. 'I can tell you no more than that,' he said. 'It is all that I know.'
'It's all that you *know*?' The American looked sceptical.
'Yes,' Ibrahim insisted, then walked off again, with the other two falling in one at each side of him. 'I was told to discuss no more than that – and I *know* no more than that. For the rest, you must wait.'
'Wait *where*?' the girl asked in a practical manner.
They had just crossed the El-Wad Road, which was narrow, stepped and busy. Ibrahim stopped where it intersected the Via Dolorosa and stared steadily at them. Yes, he felt old now, and this couple seemed very young; he tried to recall what that was like, but it was too long ago.
'Where are you staying?' he asked them.
'In the American Colony Hotel on Nablus Road,' the American replied.
'Then remain there,' Ibrahim told him. 'Why move when you have nowhere to go? Let events take their course.'
'And how long might that be?' the young lady asked.
'As long as it takes.'
The young lady blinked rapidly behind her spectacles, wrinkled her nose and glanced at her boyfriend. The latter shrugged as if defeated, then tried one last time.
'And the Tuaoi Stone?' he asked. 'How does that relate to – ?'
'No,' Ibrahim said quickly, cutting him short again. 'I have told you all you

will learn this day. *Sabah el kheir* – goodbye. And good luck, my friends.'
He walked hurriedly away, leaving them standing on the narrow road to Calvary, and turned down a side street that led him back to his modest house in the Moslem Quarter, just behind the Lion's Gate. Entering the house, which was made of brick and mud, spartan and painted white, he thought of his wife, who had died many years ago, and of his children, both boys, who had been killed in the war against the Jews. He felt no rancour over this, understanding Man's ignorance, and only wondered how his own end would come and what transcendence would be like.
Casting off his robes, he knelt cross-legged on the stone-flagged floor, bowed his head and closed his eyes, thought of the American and his girlfriend, wondered why they had been chosen, then began the meditation that normally sent him winging across space and time, beyond the material world, to frozen lakes and snow-capped mountain peaks and, finally, to that great monastery hacked out of the rocks, where St Germain, surrounded by other Masters, protected the sacred stone: the Tuaoi Stone that the American had asked about and must find for himself.
He was just about to fall into the depths of his meditation when the unlocked front door of his house was kicked open.
Looking up, he saw a big, bulky man entering, stooping over to do so, followed by two other men.
At that moment, Ibrahim stopped wondering when and how he was going to die.
'*Scheisse*!' the big man exclaimed, standing upright again. 'What a hovel! God, how I hate Arabs!'
Now flanked by the other two men, all three of them wearing Western-styled jackets and trousers and opennecked shirts, he stopped directly in front of Ibrahim, towering over him like a monolith, and stared down with the coldest eyes that Ibrahim had ever seen.
'Stand up, you old goat,' he said. 'I have some questions to ask you.'
'I cannot answer your questions,' Ibrahim said. 'Now do what you will with me.'
The large man turned purple, reached down with surprising speed, grabbed Ibrahim by his beard and tugged him brutally to his feet. Then, while Ibrahim tried to blink the tears from his eyes, he saw that evil face up close, smelt his bad breath, heard his venomous voice.

‘My name’s Zweig,’ the large man growled. ‘*Wilhelm Zweig*. You hear me? And you’ve just been talking to my daughter and her filthy American. Now what did you tell them?’
‘These are my last moments on Earth,’ Ibrahim said, ‘and I will spend them in silence. Now do what you will with me.’
What they did to him was beyond his belief, a catalogue of torture and humiliation that went on for ever. He took it all in silence, refusing to break his vows, and as his agony mounted, as the pain became unendurable, he first found himself wondering how St Germain could let this happen to him, then found himself accepting it as his penance for the rewards yet to come.
He then flew out of his pain, hovered above it, beyond it, and looked down from the peaceful shore where he was dying to see himself on the stone-flagged floor. There was blood all over his body. His bones were broken, his flesh was torn. He was spitting broken teeth from swollen lips as their knives probed his open wounds.
He observed himself being tortured, slipping in and out of consciousness, then saw them giving up in disgust, or perhaps just exhaustion. The one called Zweig bawled at him, kicked him, spat upon him, then dragged his bloody body across the floor and rolled him against the wall.
‘I’m leaving my calling card,’ he said. ‘You might remember me by this. Assuming you’ll remember anything where you’ll soon be heading.’
Returning from his peaceful shore, dropping back down through his pain, Ibrahim opened his swollen eyes when he heard a ticking sound, focused painfully and saw a hand turning on the yellow clock of a time-bomb.
‘You see this, you old goat?’ he heard that venomous voice growling. ‘It’s set for one minute and it’ll blow you and this dismal house sky high, then your friends will blame the yids for what’s happened and all hell will break loose. Are you sure you have no final words for me? If you have, I might stop the clock.’
Ibrahim tried to smile, but his lips cracked and bled again, so he smiled in his mind because he knew that the German was lying. It didn’t matter what he said – that bomb would go off anyway – and he knew, as the hand turned in the clock-face, that the ticking was counting off the seconds at the end of his mortal life.
‘No?’ the German growled again. ‘You still have nothing to say? Then goodbye, you old goat!’

He heard them leaving his home. He tried to move, but was too weak. He lay there for an eternity, trying to think of his past life, instead thinking of the young woman and the American and St Germain, and then glowing with a radiant, inner peace as he drifted out of himself. The ticking faded away. The time-bomb faded from sight. He had counted off the seconds in his head and he knew that his time had come.
Then his whole world exploded.

Chapter Twenty-Four

Ingrid and Gerry left the Old City by the Damascus Gate, crossed the busy Sultan Suleiman Road, then went up the Nablus Road, heading for their hotel. The sun was still blazing down with unrelenting fierceness, and Ingrid felt herself longing for the rain that would turn Jerusalem green.

Hardly believing that she was here, she glanced back over her shoulder, saw the domes and minarets within the walls of the Old City, gleaming pink and golden in the light beaming down from an azure sky. She looked ahead again, squeezed Gerry's hand, smiled at him, sticking close to him as they made their way along the sidewalk, which was crowded with robed Arabs and Orthodox Jews and young Christians with rucksacks. She felt slightly unreal, as if removed from herself, and squeezed Gerry's hand a second time, wanting to feel skin and bone.

He had been looking straight ahead, his brow furrowed in thought, but now he turned his head to grin at her.
'Sorry,' he said. 'I was distracted. It's all too much for this puny brain.'
'Yes,' she replied. 'The plot thickens with every fresh encounter. And I sometimes feel that the more we know, the less we actually know – that we're just running in circles.'
'I don't think so, Ingrid. I'm pretty sure we're not wasting our time. And as for circles, remember what that old Arab said: *All endings are the beginning of something else; thus the circle is given shape*.'
'So we're about to begin another adventure.'
'Yes, Ingrid, that's it.' He tugged her into him and kissed her on the forehead.
'Let's go for a drink,' he said.

‘No,’ she replied, surprised by her own shamelessness. ‘Let’s go back to our hotel and make love. I want to forget all this.’
‘You know something: I can’t get over the difference between the private and public Ingrid – between the Ingrid who strips naked and lets down her hair and this prim and proper creature walking beside me. Straighten your shoulders, gal! Let your hair down! Let the world see the real you.’
‘No, thanks,’ she said, helplessly blushing. ‘I’m *afraid* of the real me.’
‘Not any more, surely.’ He sounded terribly English. ‘Surely not after what we’ve done together. I mean, didn’t that change you?’
‘When we’re together it’s different. I mean, it’s different when we have our privacy. But outside, in the real world, I can’t forget my father. His influence can’t be shaken off that easily. Unfortunately, I’m still that monster’s child.’
‘Yet you still want to return to the hotel and make love?’
‘Yes, Gerry, in private. And stop looking so smug.’
He grinned and nodded, as if saying he understood, then glanced across at the bus station, which as usual was packed with passengers of every conceivable nationality. Seeing this, he started walking more urgently, his brow furrowed in thought again.
‘*Alchemy*,’ he said eventually, as if savouring the word. ‘How about that? The Great Pyramid, and all those other sites, had *alchemical* purposes.’
She didn’t want to talk about it, but clearly couldn’t avoid it, so inched closer to him as they walked, and asked, ‘So what does it mean? I thought alchemy was a process of turning metal into gold – and certainly that’s what St Germain did.’
‘The original Saint-Germain and the probable keeper of the Tuaoi Stone, namely *Saint* Germain, now being one and the same person,’ he reminded her.
‘Yes, Gerry, I know that.’
‘Anyway,’ he continued, ‘contrary to the widely held belief that alchemy is *only* a chemical process, it’s also, as Helena Barbanell told us, considered to be a *mystical* process, a symbol of spiritual transformation in mankind. Jung, for instance, believed that the alchemical texts were concerned with psychic transformations and symbols rather than chemistry. Gurdjieff also took this view, believing the human body to be a vessel for alchemical change, in the sense that it transmutes lower energies into the greater powers that we already possess but lack the faith to call forth.’

‘*Mercury*!’ Ingrid exclaimed, unable to resist beating him to it. ‘The old Arab said that the Great Pyramid of Cheops represents the Square of *Mercury* – and mercury is one of the two basic elements of alchemical transmutation: male and female, sol and luna, sulphur and… *mercury*.’
‘Right,’ Gerry said.
‘Those elements have to be mixed with some kind of secret fire and heated in a sealed vessel, which marries the elements, which then purify and blacken, this process being known as the *nigredo*. Then, with further heating, the socalled *soul* of the nigredo is driven out of the black mess and turns white, to become the *albedo*. After lots more processes, the substance turns green – the Green Lion – and, finally, red – the Philosopher’s Stone.’
‘Right,’ Gerry said again, actually hugging her with excitement as they passed the site of the Garden Tomb. ‘That’s the process for *chemical* alchemy. However, for Jung and many others those processes were purely symbolic. For instance, the heat that produces the nigredo is a dark night of the soul that ends with the first stage of self-transformation. The other chemical processes are actually further stages in that largely *spiritual* transformation. And the last stage – the Philosopher’s Stone – is actually a symbol of the final complete transformation of mortal man into a new kind of being – a higher, purely spiritual being.’
‘Like that legless, armless, blind old seer in al-Hillah might have been on the way to becoming.’
‘Exactly.’
‘And possibly a being like St Germain.’
‘Yes,’ Gerry said. ‘Maybe.’
As he practically dragged her into the American Colony Hotel, which had once been a pasha’s palace and still retained that atmosphere, his excitement fused with hers and was being transmuted, she realized with a hot flush, into *sexual* excitement. Shocked by this knowledge, then amused and thrilled instead, she let him lead her across the opulent lobby to the Reception desk, where he collected their room key.
‘That’s why,’ he continued, ‘the nineteenth-century alchemist, Mary Anne Atwood, described alchemy as a *philosophical* system, which – and I quote – *by fermenting the human spirit, purifies and finally dissolves it,* unquote. In fact, Synesius, the last author in the renowned VenusParis alchemical manuscripts, had already defined alchemy as a, quote, *mental operation*,

independent of the science of matter, unquote, and – ’
‘And the so-called *magical* number of 1746,’ she couldn’t resist pointing out, ‘being a numerical disguise for the number 666 – the so-called Number of the Beast – was itself the most renowned of alchemical incantations.’
‘Yes,’ Gerry said, briefly annoyed that she had reached that point first. ‘So the magical number of 1746 – or, more precisely, 666 – is obviously related to the *alchemical* properties of the Great Pyramid… and so to the missing tip of that same pyramid.’
Opening the door, he stepped aside to let her enter the expansive room with its beamed ceiling and oriental traceries, then closed and carefully locked the door again. Breathing deeply, leaning back against the wall, he shook his head from side to side and grinned at her.
‘So that’s it,’ he said. ‘That’s the message we’ve been given. The Tuaoi Stone is undoubtedly the missing tip of the Great Pyramid. It’s also a Philosopher’s Stone that can cause spiritual transformation, and possibly *chemical* transformation as well. It is, further, the so-called *Lodestone* or *terrible crystal* of a very ancient race; and its present guardian, Count Saint-Germain, now *Saint* Germain, an original member of that ancient and *magical* civilization, is one of the leading adepts of the remaining descendents of that civilization – a civilization that had discovered the Lodestone, chemically *and* symbolically, and used it to transform the highest of its high priests, or adepts, into creatures who could transcend the material state. And some of those creatures, such as our elusive St Germain, still exist to protect the Philosopher’s Stone, which, in its physical form, is the Tuaoi Stone, or terrible crystal, and in its symbolic form is the so-called Secret Knowledge.’
‘So where *are* they?’ Ingrid asked, feeling frustrated.
‘Ah, yes, there’s the rub!’ He rolled his eyes, approached her and placed his hands on her shoulders. ‘Where are they, indeed?’
She stared at him, amused, but also feeling very sensual, then stood on tiptoe, closed her eyes and waited for him to kiss her. Instead, the room shook slightly, unexpectedly, making her open her eyes again, and even as she saw Gerry glancing at the shuddering window, she heard a distant explosion, obviously emanating from the direction of the Old City.
Gerry rushed across the room to look out the window. He was still there when she reached him, wriggling in beside him, and saw a cloud of smoke

billowing up to the east, obviously from a part of the Moslem Quarter, close to the Lion's Gate.
'Shit,' Gerry said. 'That must've been a bomb. Nothing else could make *that* noise.'
'It might have been a gas explosion.'
'It was a bomb, Ingrid. *Definitely*.'
Even as a trickle of fear coursed through her, the wailing of sirens split the air. Military vehicles and ambulances were obviously racing to the scene of the explosion. She kept staring at that smoke, watched it billowing up over the rooftops, drifting south on the wind and turning the blue sky black above the magnificent golden dome of the Mosque of Omar. Then she remembered Eckernforde, the man who had died in a gas explosion, and the trickle of fear within her became a torrent, her thoughts circling back like the smoke, making her dwell once more on the old Arab they had left only a short while ago.
Unable to endure the wailing of the sirens, she stepped away from the window, straightening up as Gerry turned to face her.
'It's my father's men,' she said.
'What?' he responded, confused.
'Remember that German, Klaus Schiller, whom we interviewed in Eckernforde?'
'Yeah, of course.'
'He was burned to death in his own home after being handcuffed to a gas oven. And remember the woman who sent us to see him? Helena Barbanell, in London? She also was murdered in her own home after talking to us.'
'I don't think – '
'I do. That old Arab we just talked to probably lived in the Moslem Quarter – and was certainly heading in that direction after parting from us. That explosion is too much of a coincidence, Gerry. I think that old Arab has been killed in that explosion. Murdered by my father's men.'
Gerry gave a low whistle. 'Oh, boy,' he said. 'You think your dad's men are right here in Jerusalem?'
'Yes.'
'That's too close.'
She had wanted to let her hair down and take her clothes off, to make passionate love to him and lose herself in him, but now she was only

conscious of the fear that was pummelling her. It wasn't fear for herself – she knew that her father was unlikely to physically harm her – but for Gerry, who would, if he was caught, be forced to pay some terrible price for having stolen her away – which, clearly, is how her father would view her flight from him. So, her heart raced, being pumped by her fear, and she glanced automatically at the room door, as if someone was lurking just outside it.
'We have to get out of here,' she said.
'Correct, Ingrid. We have to get across the Old City and confirm if what you say is true. We have to find out if that old Arab was killed and, if so, who did it.'
'I told you,' Ingrid said. 'The old Arab is dead and my father's men killed him.'
'Probably. Yeah. But we might as well find out for sure, before running away.'
'I *want* to run away.'
'We can't, Ingrid. *We can't*! Apart from anything else, we have to wait for another message from St Germain. We can't let it end here.'
'Damn it, Gerry, you might be killed, too!'
'Come on, Ingrid, let's go.'
Unlocking the door, he ushered her out of the room, then hurriedly led her along the corridor. Even as they made their way down the stairs and into the lobby, they could hear other sirens, alarms, going off all over the Old City. Gerry gave his key to the man in Reception and was just about to rush Ingrid to the exit when the desk clerk grabbed him by the wrist, holding him back, and then shrugged apologetically.
'I'm sorry, sir,' he said. 'I don't mean to be rude, but we've just received a call from the security services, telling us to recommend to all our residents that they remain indoors until the All Clear sounds.'
'The *All Clear*?' Gerry asked in disbelief.
The desk clerk shrugged again. 'There's been an explosion in the Moslem Quarter of the Old City,' he said. 'Apparently an aged Arab, one of the quarter's most respected religious leaders, has been killed in the explosion, and the Moslems naturally believe it was an assassination carried out by the Jews. Already there are demonstrations all over the Old City, some of them violent, and it's expected that the violence will soon spread out into East Jerusalem. The army's being drafted in to protect the area, but they haven't

arrived yet.'
Ingrid just had time to catch Gerry's knowing glance before she was practically dragged by him across the lobby, past other excited residents, and out through the main door. Just as the sunlight dazzled her vision, she heard a siren nearby, rubbed her eyes, blinked, then saw a jeep containing six armed Israeli soldiers racing past her. It growled away along the road, leaving a sudden, startling silence, then she heard rifles firing, a machine gun roaring in the distance, obviously within the walls of the Old City where a battle was raging.
'We won't be able to get in there,' she said to Gerry. 'The soldiers won't let us in. And since we now know for certain that the old Arab has been killed in the explosion, we also know who the assassins are. Not Jews… My father's men.'
The machine gun roared again. The rifles answered immediately. Gerry jerked his head around, looking towards the Old City. Following his gaze, she saw more smoke and heard louder explosions.
'Hand grenades,' Gerry said. 'That'll be the Arabs. Jesus… your dad.' He shook his head in disbelief, then squeezed her hand. 'Okay, Ingrid, now we know his men are here. So let's get the hell out of this hotel and go somewhere else. We have to stay in Jerusalem until St Germain makes contact – but we've got to hide out.'
'Then St Germain may not be able to find us.'
'He's *always* been able to find us and he'll find us again. Now let's pack and get out of here.'
Collecting their key again, they hurried back to the room, locked the door once they were inside, then crossed to the window to look out again. The rifles were still firing, the machine guns roared, the hand grenades exploded; and now some Israeli soldiers were spilling out of a truck parked below to guard the hotel entrance.
'They must believe that the Arabs will soon be attacking us,' Gerry said. 'They might refuse to let us leave the hotel.'
Ingrid looked out over the rooftops of East Jerusalem, at the domes and minarets of the Old City and the black smoke boiling over them, listened to the gunfire and exploding hand grenades and distant shouting, and thought with rage of what her father had begun for his own selfish purposes. The rage burned up and consumed her, releasing her from fear, and then bubbling up

from it came amusement at the thought of her victory.
She had been what her father wanted, a frightened child, a crushed woman, forced by his base sensuality into being ashamed of her own desires, her shame then making her hide her own charms, with stooped shoulders, in the clothes of a middle-aged lady, behind thick-rimmed, ugly spectacles.
What would he think if he knew her now? If he knew of her love for Gerry? What would he do if he saw her wearing tight clothes, her long hair tumbling free?
He would turn purple with rage.
Feeling as though she had been transformed by the very alchemical process that Gerry had discussed, she turned away from the window, drawing Gerry's gaze to her, then faced him when she stood by the bed, the back of her legs pressed against it. Gerry stared at her, sensing something, not quite sure what it was, and when she saw his confusion, his sweet and tender concern, she smiled at him and then removed her glasses and threw them onto the nearest chair.
'I don't *really* need glasses,' she said. 'I can see *you* without them. I only wore them because I was frightened of people and the glasses made me feel hidden. I won't be wearing them anymore.'
'No,' Gerry growled. 'Don't.'
Surprised and thrilled by his husky tone, even more thrilled when he stepped towards her, she stopped him with a raised hand, listened to what was happening outside, heard the roaring machine guns, the snapping rifles, the explosions, then removed the clips from her pinned-up hair, slowly, one by one, and then, as Gerry was taking a deep breath, let her long hair come tumbling down.
'In future, I'll *always* have it like this,' she murmured throatily. 'I *do* hope you like it.'
'Oh, Ingrid… Oh, baby!'
Once more he started towards her, but again her raised hand stopped him. Then she let that hand fall upon her bosom and started unbuttoning her blouse. She did it slowly, with amusement, teasing him, wanting to please him, and when she heard the audible quickening of his breath, she felt like a queen.
She let the blouse hang loose, took a deep breath, slipped it off her shoulders.
'Jesus, Ingrid. Oh, Christ!'

His words came at her as a groaning, a helpless sign of surrender, then she felt herself falling back upon the bed with his body on top of her. He was kissing her, stroking her, stripping the clothes from her, and she raised and lowered herself to help him as his fingers tugged and explored.
She felt deliciously wanton, shameless, almost mischievous in fact, but then started losing herself in his heat and hard muscle. He divided her, entered, radiating heat through her, and she melted from her insides to her skin and then flowed all around him.
She became *him* at that moment. She was him and he was her. They joined together, congealed, burned as a single flame, and then she came to life as him, who was her, and through that found herself.
So she made love like a whore, voluptuous and proud, while outside machine guns roared, rifles snapped, grenades exploded, and the world seemed to come to an end and be renewed on the instant.
Putting an end to her old self, accepting the new, she felt him come inside her, let her spasms match his, gasped, regained her breath, then chuckled and kissed his damp forehead.
'Terrific!' she whispered.

Chapter Twenty-Five

Gerry was feeling really proud of himself when the noise of machine guns, rifles and exploding hand grenades reminded him that a minor war had erupted in Jerusalem and was, by the sound of it, rapidly spreading out around the Old City and approaching the hotel. Sitting up on the bed, he was about to go to the window when an odd sound near the room door made him look in that direction.

An envelope was being slipped under the door. Glancing down at Ingrid, he saw her tangled hair, sleepy eyes and swollen lips, then he slipped out of bed, put on his underpants, went to the door and picked up the envelope. He opened the door and looked in both directions along the corridor, but there was no one in sight. Sighing, yet feeling slightly amused by St Germain's bizarre games, he closed the door and returned to the bed, tearing the envelope open as he did so.
Ingrid, stark naked, sat shamelessly upright and watched him as he withdrew

the contents of the envelope and carefully studied them.
‘Well?’ she asked him.
He shook his head ruefully from side to side while grinning at her. ‘Two air tickets to Calcutta,’ he said, holding the tickets up in front of him and waving them in a teasing manner, ‘along with false passports, plus air and train tickets to take us on to Darjeeling, at the base of the Himalayan Mountains in India. You’d better buy yourself a good pair of hiking boots.’
‘Lord! When do we leave?’
‘Right now, more or less. The first leg of the journey starts this evening, but I assume this is St Germain’s way of also getting us away from your dad’s thugs. So let’s leave the hotel right now and go to the airport, before they actually find out where we are.’
‘Do you think they’ll let us out of the hotel?’ she asked him, indicating the window, through which could be heard the increasingly loud sounds of conflict.
‘It was only *recommended* that we remain in the hotel,’ he told her. ‘And if we’re heading for Ben Gurion Airport in Tel Aviv, rather than into the Old City, I don’t think they’ll bother us. So let’s shower and get dressed.’
They shared the shower, soaping one another down, became aroused and rushed back to the bed and made love again. Satiated, satisfied, they wisely took turns with the shower, then dressed, packed their holdalls and left the room.
Downstairs in the lobby, an armed Israeli soldier was standing guard inside the main doors. When Gerry checked outside, he found two other armed soldiers guarding each side of the entrance. Asking one of them if it was okay to take a cab to Ben Gurion Airport, he was told that it was, so he returned to Reception, paid his bill and ordered a cab.
‘Let’s wait outside,’ he said to Ingrid. ‘Let’s see what’s happening.’
Carrying both holdalls, he led Ingrid outside where, while they waited for the cab, they listened to the sounds of battle from the Old City and saw black smoke billowing up into the otherwise bright afternoon sky.
‘A regular little riot,’ he said to Ingrid. ‘Nice to be where the action is.’
‘I don’t think that’s at all funny, Gerry.’
‘So sorry, sweetheart.’
He was stirred to note that even when trying to be severe in that very European manner, Ingrid was (particularly minus specs and with her long

hair falling over her shoulders) a pleasantly attractive young woman, not to say sexy. Suddenly brimming over in a flood of emotion, he put his arm around her, pulling her to him and kissing her pale cheek. She made a soft purring sound, like a cat when its throat is stroked, and was just about to turn in closer to him when the cab arrived.

The sounds of battle had moved out of the Old City and were slowly progressing up the Nablus Road when the cab driver suddenly stood on his brakes and started frantically honking his horn.

Releasing his grip on Ingrid, Gerry glanced around him, noted that a large group of Israeli soldiers were stepping *backwards* along the Nablus Road, as if retreating from an advancing mob, so picked up the holdalls and hurried with Ingrid to the honking cab.

However, just before reaching the cab, he heard another noise – a roaring even louder than the sounds of battle – and then felt the force of a sudden, pummelling wind. Almost swept sideways, he was jerked back by Ingrid, then looked up as the roaring became deafening and the wind beat at him more furiously. Dazzled by the sunlight, briefly blinded by swirling dust, he rubbed his eyes, shook his head to clear it, then looked again and saw, descending rapidly and noisily, a helicopter with no markings on its bodywork.

'Shit!' he muttered. 'What – ?'

Deafened by the roaring, beaten back by the pummelling slipstream of the helicopter, he dropped the holdalls and heard another sharp noise – the screeching of tyres. He also heard Ingrid shouting, first his name, then a warning, and lowered his gaze to the road as a canvastopped truck screeched to a halt just beyond the parked cab, disgorging a lot of heavily armed soldiers, all of them wearing old Nazi SS uniforms, most of them surprisingly youthful.

'Christ!' he said to Ingrid. 'It must be your dad's men!'

Instinctively grabbing Ingrid, her pulled her against him as the cab driver jumped out of his vehicle and fled, the Israeli troopers by the entrance started shouting, and the adolescent soldiers in front of him spread out while lowering their weapons to the firing position.

The helicopter dropped lower, a machine gun roared, then all the soldiers began firing their weapons.

'Get down, Ingrid! *Get down*!'

He pulled her closer to him, heard her gasp as if amplified, then dragged her down the hotel steps, writhing backwards, and tugged her against the nearest wall. The noise was catastrophic. He glanced back up the steps as plaster exploded around the doorway and one of the Israeli soldiers, after jerking wildly like an epileptic, collapsed and bounced, lifeless, down to the road.
'Oh, God!' Ingrid cried. '*No*!'
She turned her head away from the dead man, from that bouncing, rattling corpse, and hid her face in Gerry's chest as he looked back up the steps and saw the other Israeli soldier dropping low and bawling, then quivering to the bucking of his sub-machine gun, which was aimed at the road. More plaster and brick exploded around him, dust spiralled up from the steps. Gerry looked to the front and saw the horde of SS-uniformed adolescents swarming across the road towards the hotel, firing their weapons on the move, screaming like lunatics, some pirouetting convulsively and dropping dead.
'*Don't move, Ingrid*!'
She had started scrabbling across the steps, but he grabbed her and pulled her back, looking up as the helicopter dropped dangerously low, its rotors whipping the air into a tornado, its roar almost deafening.
'Oh, God, *it's my father*!'
Even as Ingrid's breathless, heartbreaking wail of despair stabbed him to the core, Gerry recognized, through the swirling dust, in his panic and confusion, the broadshouldered Wilhelm Zweig, who was leaning out of the shuddering helicopter and bawling instructions to his adolescent troopers through an amplified megaphone.
'*Don't harm the American and the woman*! *Bring them both in alive*!'
Deafened and dazed, Gerry felt a bubble of insane laughter expanding inside him. This whole affair was a bad dream, too ridiculous to be true, yet another Israeli soldier screamed and quivered epileptically as the wall behind him was perforated with bullet holes and spat clouds of dust.
'It's my father! *Oh, God*!'
Hearing that singular wail of grief from the woman he loved, Gerry suddenly vaulted out of himself and became someone else.
He saw the dead Israeli, the rifle and hand grenades that had rattled down the steps now scattered around his tattered, lifeless body like obscene decorations.
He glanced up at the helicopter, saw Zweig hanging out, saw the megaphone,

the rotor blades above, as he pushed Ingrid away from him.
He hardly knew what he was doing. He was a dreamer in his own dream. Ingrid cried out in protest as he hurled himself forward. The dead man was very dead. He knew that when he touched him. He reached down, inexperienced, risking all, and picked up a hand grenade.
'Oh, shit!' he said. 'Jesus!'
He had only seen it done in movies, so that didn't help too much, but he lay on his belly, seeing bullet holes and blood, then rolled onto his back and pulled the pin out of the grenade. He saw the adolescents charging, firing their weapons on the move, then he threw the grenade, saw Ingrid crawling towards him, grabbed her, pulled her to him, fell protectively upon her and hoped that the throw was correct.
'Get them!' Zweig bawled through his megaphone. '*Bring that pair in alive*!'
The hand grenade exploded with an almighty roar, something tearing at the air, rippling through Gerry's senses, and he saw a pall of smoke in which Zweig's stormtroopers were staggering and screaming. They broke, then, and ran as more trucks materialized to disgorge other soldiers, Israelis, tough and trained, firing methodically and precisely, cutting down those in flight like so many ninepins.
Those not dying were screaming, scrambling back into their truck, but were pursued by the Israelis as the vehicle growled into life and lurched forward through a fusillade of gunfire and more scattered explosions.
Gerry looked up, saw the helicopter ascending, watched it shrinking above him, ennobled by sunlight, then looked back at the road and saw Wilhelm Zweig's truck bouncing and swaying through a hail of Israeli gunfire and cascading dust. It soon screeched around a corner with the Israelis in hot pursuit – and then Gerry felt movement beneath him and realized that he was still lying upon Ingrid who, as the sound of battle receded, gave a smile like the dawning sun.
'Oh, my hero!' she crooned.

Zweig couldn't believe it. As his helicopter soared above the rooftops of East Jerusalem he looked down and saw his troopers in his rented truck fleeing from the scene of the debacle. Zweig couldn't believe their incompetence, their woeful lack of courage, and as the sirens continued wailing and more Israeli troop carriers closed in on the hotel, thus blocking off all chance of

escape for his men, he let out a bellow of rage, hammered a fist into the palm of his other hand, but had to keep looking down, transfixed by defeat.

It was more than he could bear. Ingrid's boyfriend, the American, had managed to put Zweig's troopers to flight by simply giving them a taste of their own medicine with a neatly flipped hand grenade.

All that training! That iron discipline and order! All destroyed by an… *amateur*!
'You scum!' Zweig bawled, waving his clenched fist at the truck that was skidding to a halt inside a circle of Israeli troop carriers, under dense, streaming dust. 'May you all rot in hell!'
Finally, just before the helicopter soared too high for him to see properly, he managed to make out his daughter and the American embracing on the stops of the hotel, while a horde of Israeli soldiers – despised Jews swarming like ants on an anthill – appeared from all directions to fill the streets around the hotel and capture the last of his men.
Zweig let out a cry of rage and vowed to himself that he wouldn't rest until he had Ingrid, the American *and* St Germain in his clutches.
'Now get me out of this Jewish cesspit!' he bawled at the pilot. 'I can't stand the stench of it!'
Too frightened to speak, the pilot nodded and obeyed; then the helicopter shuddered and climbed rapidly towards the sun, carrying Wilhelm Zweig, shocked and outraged, away from his personal hell on earth.

The Lodestone
Book 3: The Secret Knowledge
W.A. Harbinson

It is said that whoever holds the Lodestone will own the entire world…

It was originally the apex of the Great Pyramid of Egypt. Its function was to create fusion between Earth and the Cosmos. It holds the key to the infinite mysteries of the

universe. And it has been missing for centuries…
Wilhelm Zweig, ageing master-criminal, is determined to find it – and with it the key to immortality.

But in his way stands the legendary Count de Saint Germain, history's most mysterious figure, believed to be the protector of the magical stone. And against him is Gerry Remick, a young American with a passion for unexplained phenomena – and for Zweig's unhappy daughter, Ingrid.

Together, and relentlessly pursued by the evil Zweig, Gerry and Ingrid embark upon a dangerous quest for the
Lodestone, an epic journey that takes them through Europe and the Orient, past the sites of the Seven Wonders of the World, and on to a final magical confrontation on the summit of the Earth…

Book Three
The Secret Knowledge

Chapter One

St Germain had thoughtfully arranged for Gerry and Ingrid to have a few days' rest in Calcutta before going on to Darjeeling; and Gerry insisted that they recover from jet lag by making love until midnight local time, after which, as he helpfully pointed out, they could sleep arm in arm like babies and awaken feeling refreshed and normal. This they did, since Ingrid now loved lovemaking, and indeed they both awakened refreshed and more prepared to face the disorientating strangeness of India.

'Calcutta's the largest of all Indian cities,' Gerry informed Ingrid as they regained their breath in bed, having indulged themselves once more upon wakening, 'and is, in fact, the second biggest in the British Commonwealth, outranked only by London. It spreads over 270 square miles, has a population of approximately ten million souls, and is filled with industrial plants and textile mills, most processing jute.'

'That's fascinating, Gerry.'
'You think so?'
'Absolutely.'
'I like learning these little facts. It makes me feel more

at home.'

Aware that they hadn't seen the last of Ingrid's father, but convinced that he would not be able to trace them for some time, they delighted in their luxurious accommodation (paid for in advance by 'a European gentleman who does not wish to be named') in the Oberoi Grand Hotel in Jawahharlal Nehru Road, overlooking the sweeping lawns of the Maiden, and during the next couple of days used it as a base for their exploration of the vast, noisily overwhelming city.

Glowing beautifully after their first night and morning of passionate lovemaking, Ingrid more than once tried to persuade Gerry to take her to the Ashutosh and Indian museums, the Marble Palace or the various temples and mosques of the sprawling city; but he had no intention of wasting his time on seeing things he could see in illustrated books. So he insisted, instead, upon seeing the *real* India, which was, according to him and clearly to Ingrid's horror, to be found in Howrah Station, where hundreds of passengers hung out of the carriage windows like bunches of dark grapes, whole families camped out on the platforms for days until they could depart, and peddlers of rice and sweetmeats, water vendors, tea-serving waiters, newsboys and rampaging, shrieking children added their relentless clamour to the cacophony of the hundreds of loudly chattering Bengalis and Hindus, the bawling of porters, and the whistling and clanging of the oil-covered, red-rusted locomotives, which, in clouds of smoke and fountains of steam, were disturbingly spectral.

'The *real* India,' Gerry said. 'Not your usual tourist rubbish. These are the sights, sounds and smells that you'll never forget.'

'It's awful,' Ingrid said candidly. 'I can't stand it. Let's get out of here.'
'You're joking,' he responded. 'You can't mean that. Let's do some exploring.'
Making it perfectly clear that she was repelled by the swarm of humanity that virtually lived in or passed through the smoky, chaotic station, Ingrid persisted in trying to guide Gerry towards some culture; but considering himself already well educated, his brain already crammed with facts, he instead turned time and again to the exotic hustle and bustle of the station; and when in need of a change only took her out of it to join the throng of penniless peasants and holy men in dhotis and saris, who poured by bus, car, truck, bicycle, ox-cart, rickshaw and foot across the immense, cantilevered Howrah Bridge, its web of girders casting shadows on the muddy, slow-flowing Hooghly river, the shores of which were crammed with barbers and masseurs who plied their trade by the water's edge while the sacred cows roamed amongst them, untouchable, safe.
The shores of the Hooghly frightened Ingrid even more than the station had, particularly during the evenings when the atmosphere changed dramatically,

becoming unfriendly, deep-shadowed and threatening. She certainly smiled more readily when, after two exhausting days in the seething city, they left, took a forty-five-minute flight to Bagdogra, and boarded the famous Darjeeling Himalayan Railway 'toy' train at New Jalpaiguri, for the seven-hour journey to Darjeeling.

'I feel like a kid again,' Gerry said. 'It's like being on a ride in Disneyland.'

'It's lovely,' Ingrid told him, relieved, as she was, to be out of Calcutta. 'I'm enchanted. Now *this* is the India *I* love. I can't wait to get started.'

The 'toy' train consisted of three coaches and a baby locomotive that huffed and puffed its way laboriously along a two-foot gauge track, first winding through the solid walls of vegetation in the dense forest just outside Bagdogra, then beginning the exceptionally steep, twelvemiles-per-hour climb uphill, until the forest had been replaced by a lush green landscape of terraced tea plantations that rose, one on top of the other, to a crystalclear sky.

While Ingrid observed the scenery with eyes brightened by delight, Gerry, who preferred the squalor of urban life to picturesque landscapes, found himself wondering just what would be in store for them once they arrived at Darjeeling. They were heading for the Himalayas, and he wondered why this was so; wondered if those legendary peaks held St Germain's secret lair.

'And why not?' he asked Ingrid. 'To the Tibetans, the Himalayan peaks are the sacred ground for an awful lot of gods and demons, and are credited with supernatural powers of defence. In fact, so sacred was Kanchenjunga considered to be, the British expedition of 1955 turned back five feet from the summit in order not to offend their Sherpas. The area hasn't been explored much at all, and to hide in it wouldn't be too difficult.'

He caught his first glimpse of Kanchenjunga from the small village of Kurseong, where the train's track ran along Main Street and the shops were so close that the passengers could haggle with the vendors without leaving their seats.

While Ingrid purchased a silk scarf from one of the shopkeepers who was only an arm's length away from the window of her coach, Gerry contented himself with studying the snow-capped peaks of Kanchenjunga.

The names of the mountains reflected a mystical tradition, with the highest of them all, Everest, being the Mother of the Earth, Annapurna translating as Giver of Life, and the mountain richest in mythology – the one he was

looking at, Kanchenjunga – being the Five Treasures of the Eternal Snows, since the Tibetans believed that the God of Wealth lived there, storing in its five peaks his five treasures: gold, silver, copper, corn, and sacred books… perhaps, in fact, the Secret Knowledge… the Philosopher's Stone.

'I wonder where we'll end up,' Gerry said to Ingrid.

'I don't care,' she replied. 'Right now I'm just enjoying the trip. I think I'm in heaven.'

'You *look* like you're in heaven. You're all suntanned and glowing.'

'I don't want to remember the past or even think about the future. I just want to soak in the landscape and live for the minute.'

'Good thinking, Ingrid.'

Leaving Kurseong, the 'toy' train continued its journey up through gloriously varied, exotic scenery, moving so slowly that every car on the adjoining road passed it easily and children were forever jumping onto the running boards of the coaches to talk, make faces, or beg for money.

Ingrid seemed ecstatic, more so as the train climbed higher, but Gerry started feeling confused. On the one hand fascinated by what he was seeing, he was, on the other, becoming increasingly disorientated, overwhelmed, almost crushed, by the distant, snow-capped mountains, obsessed with the thought that they might not be distant for too long, might in fact be his final destination, the place from which he would not return.

This thought was unavoidable, unshakable, frightening, and as the 'toy' train climbed higher yet and the air became more rarefied, he felt himself becoming light-headed and more divorced from himself, as if he was indeed being prepared for some dramatic, irrevocable change.

For this very reason he smiled and joked a lot with Ingrid, but with each passing hour, with each subtle change of scenery, he felt himself slipping into another, more alien skin, burning with a disturbing mixture of excitement and fear.

'It's really weird,' he said, 'but I'm still convinced we're being watched, that somehow or other St Germain has his eye on us.'

'I feel the same,' Ingrid admitted. 'I keep imagining I'm being stared at. The most innocent glance makes me nervous. I'm growing so paranoid.'

'Yeah,' Gerry said. 'Right.'

Eventually, after nearly seven hours, the journey ended at the world's highest railway station, Ghoom, at 8,000 feet, which was 1,000 feet above Darjeeling

itself.
Exhilarated and fearful, mentally alert and physically exhausted, he and Ingrid explored the brightly painted redand-blue Tibetan Buddhist monastery of Ghoom – where the monks were of the yellow sect and worshipped a large image of the Coming Buddha – then took a rickshaw down to the Oberoi Mount Everest hotel on Gandhi Road, with its glorious views of Kanchenjunga.
St Germain was being kind to them, since they soon discovered that they were able to view the mystical mountain even as they lay naked together on the bed and made love, which they did often throughout that first afternoon, evening and morning. The next day, satiated for a while, they checked if there were any messages for them, fully expecting to find one from St Germain. Upon being told that there were none, and that their suite had been booked for 'a maximum of one week' and paid for in advance by 'a well-dressed European gentleman', Gerry decided that there was little they could do other than let events take their course, meanwhile enjoying the delights of the town.
'Let's go out and explore,' he said to Ingrid. 'We might as well be normal tourists for the time being. Have we any cash left?'
'Enough to last for a couple of weeks if we're economical.'
'Aren't we always, my pet?'
He couldn't help but feel pleased at the thought of having spent most of the money Ingrid had pilfered from her monstrous dad. Any thought of Zweig was inevitably tinged with dread, but the fear *could* be defeated, at least temporarily, by imagining the fat pig flushed with rage. He must have been flushed a lot like that since Ingrid fled from the hotel in Cairo, and Gerry savoured his little bubble of joy at the thought of Zweig suffering so.
Yet the fear always returned. It was something he hid from Ingrid. He joked to hide his concern over where they were headed and, perhaps more relevant, his fear that the actions of her father must be secretly tormenting her.
Her escape from Zweig's clutches had changed her profoundly, given her self-esteem and strength, but Gerry knew that she still felt dread and shame in the knowledge of what her father was – a murderer, a monster, possibly a psychopath – and he sensed that this bitter knowledge was something she had not yet learned to live with. She couldn't accept that it was true, didn't want to believe it, and would not be a completely whole person while Zweig's

shadow hung over her.
A confrontation with Zweig would come sooner or later; and Gerry, while occasionally frightened for himself when thinking about that, was even more concerned for Ingrid and what such a confrontation might do to her.
As if contaminated with Ingrid's fear, reminded of how far from home he was, and suddenly realizing that he didn't even know if he would ever return from here, he left their room in the hotel to let Ingrid shower and dress, padded furtively down the stairs, picked up one of the public telephones just off the opulent lobby, called his mother's New York number and, after considerable difficulty, eventually managed to make contact.
'Hi, Mom, it's me.'
'Who?'
'Me. Gerry. Your son!'
'Gerry! Where *are* you? Why haven't you come home yet? I'm in the middle of a game of bridge and the girls keep asking embarrassing questions about you. I mean, why aren't you *home*, dear?'
'I'm in India, Mom.'
'I *beg* your pardon?'
'In India. I can't explain everything just now, but I'm calling from India.'
'You're still… *sight-seeing*, Gerry?'
'Yes, Mom, you could say that. I mean, I'm travelling around here on my own, living cheaply and enjoying it, so I'm not sure when I'll be coming home.'
'You're living… *cheaply*?'
'Yes, Mom, real cheap. I have a rucksack and I hitchhike everywhere and I'm having a great time.'
Even as he said that, he had the distinct feeling that he was being watched. Glancing over his shoulder at the busy hotel lobby, he thought he saw eyes staring at him, blinked, then saw nothing, scanned the people in the lobby to no effect and then felt pretty foolish. He was brought back to reality by the sound of his mother's voice.
'It sounds absolutely dreadful. That country is filthy, son. I just hope you're taking malaria tablets and avoiding all food and drink that doesn't come in sealed containers.'
'I just called to say I love you.'
'Well, that's very sweet, dear. But I suspect that there's more to it than that…

Is some *woman* involved?'
'Of course not, Mom.'
'Not that awful German's daughter!'
'I promise you, Mom, I'm travelling around on my own. There's no woman involved.'
'So when are you coming home?'
'What's that, Mom? I can't hear you.'
'I said, when are you planning to return? It's been *weeks* since I've seen you.'
'I just rang to say don't worry. I mean, I'm having a ball, Mom. I just rang to say I love you, that I'll try to keep in touch. I'm probably going hiking in the mountains, so I won't be near a phone for a while.'
She sighed melodramatically. 'If you say so, dear.'
He used the uncomfortable pause that followed to scan the busy lobby again. He noticed a man turning away from him, almost *too* quickly, and watched him move off through the other people and turn up the stairs. *Had* that man been watching him? Was he only imagining it? He sucked his breath in and let it out to make his heart settle down again.
'I'm alright, Mom, I promise,' he said without feeling too confident. 'You don't have to worry.'
'I *do* hope you're not involved with some woman.'
'Cross my heart, hope to die.'
He heard her sigh again. 'Well, fine. Enjoy yourself. Just remember to avoid local food and drink and not talk to strangers.'
'I'll remember, Mom. Honest. I've had a good time so far. And, I repeat, don't worry if you don't hear from me for some time – I'll write sooner or later. Okay?'
'Well…' Her hesitation was profound. 'If you insist… I suppose.'
'Goodbye, Mom.'
'You take care, dear.'
He hung up, feeling guilty, wiping sweat from his brow, wondering when he actually would return home – if, indeed, he would ever do so. Turning away from the phone, he glanced around the lobby, hoping to catch someone staring at him, but the people, mostly middle-aged men and women, seemed routinely preoccupied.
Feeling foolish in his nervousness, he returned to the room, found Ingrid washed and dressed, felt like stripping the clothes off her again, but instead

growled, ‘Let’s go.’
‘Of course, darling,’ she murmured in an indescribably sensual, seductive manner. ‘Whatever you say, dear.’
They left the hotel.

Chapter Two

Darjeeling, if thoroughly enchanting, was a place to be *climbed*. Built on the side of a steep hill, overlooked by the splendour of the snow-capped peaks of the Kanchenjunga mountain range, it sat on a series of natural landings linked by steep flights of steps and narrow, almost vertical lanes. The top level of the village was the main tourist area, with the larger hotels, restaurants, cafés, shops and attractive villas lined along the busy Mall, or Main Street; the middle level was more authentically Indian, with smaller hotels, more shops and cafés; and the lower level was the most interesting of all, being filled with Darjeeling’s working population of Nepalese, Tibetans, Bhutias and Lepchas, most in colourful tribal costumes, forming an exotic, noisy throng in the bazaars and markets.

Determined to keep active while he waited to be contacted, and not wishing to give either himself or Ingrid time to dwell uncomfortably on Wilhelm Zweig or the magical unknown into which St Germain was drawing them, Gerry dutifully led Ingrid around the town and surrounding areas, but always circled back automatically, as if in a trance, to the ravishing, three-tiered town, seduced by its natural beauty, exoticism and vibrancy, but even more than that, by the thought that he and Ingrid would possibly soon be facing the elusive St Germain.

That expectation was exciting, but also increased his fear, and as he tried to pass the time, seeing the sights, playing the tourist, he was increasingly frustrated by his impotence at this stage, by his knowledge that he was now at the mercy of St Germain’s whims. His paranoia was building, perhaps even infecting Ingrid: he was haunted by shadows, by the sounds of unexpected movement, imagining eyes upon him, agents always on his tail, and was concerned that those in pursuit would not necessarily be St Germain’s allies.

No, Zweig would not give up. He would be following them as well. And if Gerry and Ingrid, at least so far, were being *guided* by St Germain, they would not be handled with such care if caught by Zweig's thugs.

Gerry felt trapped, caught between opposing forces, so trying to keep himself busy, yet also looking for helpful signs, he continued to explore the teeming town.

'They *might* approach us,' he said. 'But they might be expecting us to find them. Without guidelines, there's nothing we can do except keep our eyes open.'

'The more I do that,' Ingrid said, 'the more I imagine things. Even my own shadow scares me now.'
'Maybe that's part of the test as well. We'll just have to live with it. Let's check out a few cafés.'
If the lower part of the town was rendered exotic by its hordes of brightly costumed Indians, it was also noteworthy for its collection of Western hitchhikers, adventurers and shady characters who drifted restlessly from one meeting place to another, trading anecdotes and information, buying and selling drugs, and generally offering Gerry a different kind of danger and intrigue.
'These guys are brigands,' he told Ingrid. 'They're all here for adventure. They're the last of the existentialists, living just for the moment, into drugs and sex and quick thrills, contemptuous of capitalism, of *materialism*, into spiritual things.'
'They're mostly just bums,' Ingrid responded in her more practical way. 'And they all need a bath.'
'But they know what goes on here, Ingrid, and they might tell us something.' Using this as his excuse, he dragged the reluctant Ingrid down the steep steps and narrow lanes of the town to is colourful lower level. Once there, he led her from one noisy café to another, smiling brightly enough to encourage any passing stray, whom he would then engage in lengthy, sometimes drunken or drugged conversation about quantum mechanics, the Theory of Relativity, the possibility of life after death, the mind-expanding potential of hallucinogenic drugs, and the lore and lure of the magical mountains that loomed over the

town.
He was careful not to mention the real reason for his and Ingrid's presence in Darjeeling, and, when asked, lied blandly that they were here simply as tourists. But during those conversations, with the air smelling of curry, beer, cigarette smoke and marijuana, filled with the cacophony of tinnily amplified Western music, he learned from more than one long-haired, bearded youth that it *was* generally believed that the sacred mountains of the Himalayas, particularly Kanchenjunga, harboured a secret colony, or colonies, of ancient mystics.
'Yeah, man, this place is *weird*,' he was told. 'Strange things happen in the mountains. There's hidden valleys up there, fabulous riches, strange forces, a lot of things that can't be explained and make the Sherpas real nervous.'
'I'm with you,' Gerry said to his stoned friend, 'I've heard a few stories.'
'Fucking A,' his new friend said, drinking beer, smoking a joint. 'But it's best not to look into it too carefully, man, 'cause that can bring you bad luck. I mean, people disappear. They don't ever find the bodies. The Sherpas say they got too close to forbidden places and were stolen away. There are *weird* bastards up there. No one knows who they are. Some say they're Tibetan monks, but others say they don't even come from Earth, that they're not of this time.'
'Wow!' Gerry exclaimed. 'Far out!'
'You ever see the lights, man? Lots of *strange* lights up there. People climbing up there have been *attacked* by those lights and driven all the way back down the slopes. There are places you just can't go. You even get the lights right here, flying down from Kanchenjunga. They're really *weird* lights – disc-shaped, like goddamned UFOs – and they're often seen flying down from the mountains and hovering over Darjeeling. Sometimes they land. You can see them glowing beyond the lowlands. Then they ascend again, real quick, no noise, and blink out in the higher slopes of Kanchenjunga, just like light bulbs. *UFOs*, man! Really *weird*…'
That news changed Gerry's attitude, encouraged him out of the cafés, seduced him into studying the mountains and exploring, particularly in darkness, the hills around that jewel of a town and the base of the lower slopes.
He always took Ingrid with him, frightened of being parted from her, and he loved her more than ever in those dark, scented hills, her eyes reflecting the

moon, her long hair blowing freely in the breeze and touched by the starlight. The stars were in her eyes and hair, seemed to make her white skin gleam. He realized how much she had changed, how much of a woman she was now, and wondered how much of the change, that magical metamorphosis, had been caused by the extraordinary experiences that St Germain had put them through these past few weeks.

So he walked her over the hills, in love with her, fearful for her, but after a few days, seeing nothing but moon and stars, took her back down to Darjeeling, to another smoky, noisy café, and, holding her hand, gazing deep into her eyes, reminded her that this was, in all likelihood, their last evening in town.

'It's got to be tonight,' he told her, shouting against the noise of the café, scanning the other tables for a familiar face amongst the mostly young men and women who were drinking beer and coffee and smoking pot in a blue haze. 'Our room was booked until tomorrow. That means that whatever's going to happen has to happen tonight.'

'Did you *see* it?' their long-haired, bearded new friend asked, leaning over their table, breathing the stench of beer into their faces while he puffed on a joint, his eyes large and stoned. 'It was a UFO. Jesus Christ! Or at least some kind of strange light. It came down from Kanchenjunga, hovered over Main Street, then shot off and stopped above Observatory Hill and seemed to settle down on it. A couple of guys zapped up to there. They took a jeep and went up there like bats out of hell. As they were driving there, half of Darjeeling was watching that goddamned light. It illuminated the Mahakala Temple, pulsating rapidly, then dimming; then it flared up and rose to the sky again and shot back towards the mountains. Then the guys in the jeep returned. They both looked a bit shaken. They said they got there too late – that the light had gone by the time they arrived – but that the ground around the Mahkala Cave, the Bhutian shrine devoted to Siva, was charred black and warm to the touch, as if lightly scorched. Those guys went off to get drunk in another café, but they were clearly scared shitless.'

'When did all this happen?' Gerry asked.

'About half an hour ago,' was the reply. 'Jesus, man, what a sighting!'

'That's it!' Gerry heard himself exclaim without thinking, as if the voice belonged to someone else. 'Come on, Ingrid, let's go.'

Taking her by the hand, he dragged her out of her chair, then out of the noisy

café, and kept tugging at her as they hurriedly made their way up the steep steps and almost vertical lanes, through the various levels of the crowded and exotic hillside town, until, out of breath and excited, they reached their hotel. They saw him immediately.
It was not St Germain but his equally strange partner. He was standing in the lobby, close to the main doors, wearing a light tropical suit with white shirt and old-school tie, his hands clasped together in front of him, his wintry-grey, almost silvery eyes staring steadily, hypnotically at them, a slight smile on his lips.
'Hello,' he said, his voice deep, melodious and exquisitely caressing. 'I often use the name Christian Grabbe, but you may call me…'
Here he paused to lower his head in a slight, theatrical bow, his smile one of dry amusement and mockery… and diabolically charming.
'You may call me… *Mephisto*.'

Chapter Three

As he stared at Christian Grabbe, or Mephisto, perhaps even Mephistopheles, Gerry felt himself surrendering to those silvery-grey, mesmeric eyes, to that quietly seductive smile, and realized that once more he *wanted* the man with an insatiable, unnatural, shaming lust.

He had come such a long way for this and now hardly knew how to react, let alone what to ask. The man staring so hypnotically at him, as if sensing his discomfort, smiled smoothly and stroked his ink-black hair, his amusement plain on his diabolically handsome features.

'Why are you blushing?' he asked, his voice mellifluous. 'Does my name mean that much to you?'
Gerry didn't reply. He felt confused and embarrassed. He'd never had a homosexual experience in his life, and yet he felt a very powerful need for the man smiling so teasingly at him – as indeed he'd had each time he'd seen the man before.
'It's alright,' Mephisto said softly. 'There's nothing to be ashamed of. *Everyone* feels that way about me. It's part of my curse.'
'Your… *curse*?'

‘Try looking at Miss Zweig,’ the man said, ignoring the question. ‘*She* wants me as well. If you truly love her, your jealousy will protect you from what *you’re* feeling for me. You can *talk* to me, then.’
The mockery was low-key and unmalicious, almost weary, perhaps *self*-mocking. Gerry glanced at Ingrid and noted her blushing cheeks and glistening gaze as she focused on Mephisto.
Yes, she wanted Mephisto, her whole body was straining towards him, and Gerry filled up with a fierce, blinding resentment that transcended his own lust. His desire for Mephisto fell away, just as Mephisto had said it would, and he was able to view the man’s extraordinary charm with surprising detachment.
‘Mephisto?’ he asked. ‘What *Mephisto*? Obviously that can’t be your real name, so just who the hell *are* you?’
Mephisto smiled again. ‘So many questions,’ he crooned. ‘Which one should I answer first?’
‘Why *Mephisto*?’ Gerry repeated. ‘Any relationship, by any chance, to Mephistopheles? Are you an old friend of Doctor Faust?’
‘Doctor Faust? *What* Doctor Faust?’
‘It’s generally thought that the name Mephistopheles was invented by Georg Faust, the sixteenth-century magician and charlatan, famed in legend and literature as the man who sold his soul to the devil in exchange for knowledge and power.’
‘Really? I was conceived by a magician and charlatan? How terribly undignified!’
‘I didn’t say you were *conceived* by him. I just think you might have adapted his name, that’s all.’
‘And why would I do that, young sir?’ Mephisto asked, his smiling lips moist and sensual.
‘Why? I’d love to know. Christopher Marlowe described his fictitious Mephistopheles as a fallen angel, torn between satanic pride and dark despair. Goethe, on the other hand, saw *his* Mephistopheles as cynically witty and cold-hearted. Which one are you?’
Mephisto shrugged, clearly amused and pained at once. ‘What does it matter? Your Faust was not well known in life, but only in death, his posthumous fame due to the anonymous author of a collection of tales about the ancient magi: wise men skilled in the occult sciences – ’

‘Tales retold in the Middle Ages,’ Gerry interjected, ‘about other famed wizards, such as Merlin, Albert Magnus, and Roger Bacon.’
‘Quite so. And Mephistopheles was recreated in those magic manuals as Faust. As such he is a creature of pure fiction. Why, then, should I be him?’
‘Maybe Mephistopheles *wasn’t* a creature of pure fiction. Maybe, like a lot of fiction, he was more real than reality.’
‘Well, I’m glad I at least seem *real* to you. That *will* be helpful.’
‘I want to know why you call yourself Mephisto in the twentieth century.’
Mephisto shrugged again. ‘My name is Mephisto,’ he said. ‘That’s all I know. It is the name I was given.’
‘By whom?’ Ingrid asked, blushing more brightly when Mephisto stared directly at her.
‘By St Germain,’ he said. ‘*Naturally*.’
Gerry felt oddly chilled, suddenly filled with trepidation, caught in what seemed increasingly to be some kind of wide-awake dream. Glancing distractedly around the hotel’s lavish lobby, with its impressive mixture of the traditional and the new, he noted, with a shock, that most of the women nearby were staring either blatantly or surreptitiously at the man calling himself Mephisto, some of them visibly flushed, as Ingrid was, others obviously embarrassed or confused by their own helpless behaviour. Disturbed, he returned his gaze to Mephisto, wondering who, or what, he was truly facing.
‘And who’s St Germain?’ he asked. ‘Did *he* sell his soul to the devil in exchange for knowledge and power?’
Mephisto stopped smiling. ‘I wouldn’t know,’ he said softly.
‘Or wouldn’t say?’ Gerry ventured.
‘You are impertinent.’
‘I just want to *know*.’
‘We don’t always get what we want. Shall we continue this talk sitting down?’
Without waiting for a reply, he turned slightly sideways, indicating with a nod of his head that they should all take a seat around one of the low tables in the lobby. Seated, he clasped his hands under his chin and stared at them with his silvery-grey eyes.
‘So,’ he said, ‘you have actually come this far. You must be very keen to meet St Germain… or to get your hands on the Tuaoi Stone.’

‘We don’t want the Tuaoi Stone,’ Gerry said. ‘And we *never* actually wanted it. At first we simply wanted to warn its keeper that Wilhelm Zweig was after it.’
‘Which we knew.’
‘We soon found *that* out. And then, once we’d started our search, and you’d placed various clues in front of us, leading us on with plane tickets and maps, we just had to see it through to the end.’
‘*What* end?’ Mephisto asked, his fine eyebrows raised in amusement. ‘Who, or what, do you hope to find?’
Gerry looked at Ingrid and was shocked to note that she was still staring at Mephisto, her cheeks flushed, her eyes glowing with adoration, her lips slightly parted. Now aware of Mephisto’s sexual magnetism, knowing it to be at once unnatural and irresistible, he still couldn’t help feeling betrayed by her shameless desire for him.
He turned back to Mephisto.
‘I don’t know,’ he said. ‘I can’t work it out. I only know you could have stopped us at any point in the journey
– your powers are such that you could have done that – but instead you protected us and led us this far. That old Arab in Israel said we were being tested. Tested for *what*?’
‘That is not for me to say,’ Mephisto replied. ‘You will have to ask St Germain.’
‘I will – when I see him. So when will that be?’
‘To see St Germain you must go to him, and that journey, in its simplicity and hardship, is the final, most dangerous test.’
‘I thought our journey had ended here.’
‘The journey has ended for Miss Zweig,’ Mephisto said, glancing at Ingrid. ‘But for you, the real journey has just begun.’
‘The *real* journey?’
‘Your final test. The one you must take alone.’
‘I won’t go anywhere without Ingrid,’ Gerry responded automatically.
Mephisto smiled in weary cynicism. ‘Oh, yes, you will.’
Ingrid looked confused, first glancing at Gerry, then blushing with what seemed like guilt and lowering her head.
‘I’m going wherever Gerry goes,’ she whispered. ‘I won’t leave him at this point.’

Mephisto spread his hands in the air. ‘Well, we will see.’
The way he had said it chilled Gerry to the bone, compelling him to recall all that he and Ingrid had experienced so far, convincing him that in becoming involved with Mephisto and St Germain, he was getting in over his head and could easily drown.
These were not normal people – they were possibly inhuman – and as he studied Mephisto, wondering who or *what* he was, he thought of the fine line between good and evil. Mephisto, through St Germain, had protected him and Ingrid from Zweig, but why would they bother doing that when even Zweig was no threat to them?
They were testing him – they had let him know that much – but he didn’t know why… and what he didn’t know frightened him.
‘Anyway,’ he said, hoping he sounded calmer than he felt, ‘where would I find the elusive St Germain, assuming I *did* attempt that final test?’
Mephisto pointed in the general direction of the windows at the far side of the lobby. ‘Up there,’ he said.
‘Kanchenjunga?’
‘Correct.’
Gerry thought of the far-off, snow-capped mountain peaks and the shroud of clouds that constantly hung over them, obscuring the summit. Even experienced climbers had been lost or killed in trying to conquer those slopes, so he couldn’t imagine himself, born and bred in New York City, getting anywhere near them. The very idea that he might do so was ridiculous.
‘St Germain’s up there?’ he asked.
‘Yes,’ Mephisto replied. ‘I myself came down from there a short while ago.’
‘That weird light – the one that everyone thinks was a UFO. You came down in that?’
‘Not *in* it. *Of* it. Part of it. But I can’t quite explain that.’
‘You mean it wasn’t a flying saucer?’
‘People have been seeing such phenomena for years and imagining they were seeing flying saucers. If a flying saucer is what you think you’ve seen, then that’s what it is.’
‘Except that it isn’t.’
‘No, I’m afraid not. At least not in the widely accepted sense. It’s a means of transportation, certainly, but it’s not actually *physical*.’
‘Are *you* physical?’

‘Yes. Right now I am. At least physical in the sense that you know it – a highly deceptive sense.’
‘I’m confused.’
‘You will learn more if you go up the mountain – if your courage sustains you.’
Gerry glanced at Ingrid, saw her flushed cheeks and radiant eyes, hated her with all the venom of true love and then looked around him. The women at the other tables, most bored with their husbands, were still staring helplessly at Mephisto, as if at a movie star. Gerry wanted to scream.
‘What I’ve learned about you so far,’ he managed to say in a civil manner. ‘Is that all true?’
‘Substantially, yes.’
‘What do you mean by *substantially*?’
‘You have yet to learn the truth, the whole truth, and nothing *but* the truth.’
‘Which I can only learn by talking to St Germain.’
‘Correction: which you can only learn by going up the mountain.’
‘I won’t do that. It’s the one thing I won’t attempt. I *can’t* do it and you know it, so why ask me to try it?’
‘It’s surprising what one can do if one has to – and in this case, you have to.’
Gerry felt foolish, as if performing in a pantomime. He wanted to shake the truth out of Mephisto, but knew that he couldn’t.
‘So you and St Germain are hiding somewhere up there in the mountains. What else is up there?’
‘Just ourselves and those like us. Those chosen to be the keepers of the Secret Knowledge, without which the Tuaoi Stone is useless.’
‘So why do I have to climb a mountain I’m obviously not equipped to climb? Why can’t I just hire a helicopter and get up there the easy way?’
‘You can’t do that, my clever young friend,’ Mephisto replied calmly, ‘because a helicopter won’t help you find what you’re looking for. No, the only way to St Germain is up the ancient Sherpas’ path to the monasteries that have been there for centuries. Once there, in the monasteries, assuming you ever get there, you will learn what you need to know in order to take you even higher. We are very well hidden up there – and that route is the final test.’
‘I’ve come as far as I’m going to go,’ Gerry insisted. ‘Even your secrets aren’t worth the risk of attempting to climb that mountain. I won’t expose

Ingrid to that risk, so I'm going no farther.'
'Whether or not you succeed remains an issue of doubt, but you will certainly make the attempt.'
'What makes you so sure?'
'Because we have ordained it.' Mephisto raised his right eyebrow, smiled with cynical charm, then turned and offered a different kind of smile to Ingrid. She stared back as if hypnotised. He reached out and placed his hand on her knee, as if already possessing her. 'Are you feeling alright, my dear?' he asked, his voice mellifluous and seductive. 'You look rather… *warm*.'
'I'm alright,' Ingrid whispered.
'You've been extremely courageous to come all this way. It would not be right to make you climb the mountain, so perhaps you should stay here.'
'With *you*?' Gerry asked.
Mephisto didn't bother to turn his head when he gave his reply. 'Perhaps I'll stay here. Perhaps not. Who knows what the night will bring?'
'I'm not going up that mountain,' Gerry insisted. 'The test ends right here.'
'Really? You think so? You truly believe so? The test, once started, can only end when it's finished – and it doesn't finish until you climb that mountain… which you will do, believe me.'
'Take your hand off my girl's knee.'
'Of course. I'm *so* sorry.' Winking at Ingrid, Mephisto removed his hand and then turned back to Gerry, his gaze steady and challenging. 'I've booked into this hotel for the night,' he informed them both, but then to Ingrid specifically, added, 'Room fifty-eight, *should* you need me.'
'She won't,' Gerry said, growing angry at how Ingrid was reacting to Mephisto, even though he knew she couldn't help herself. He was jealous – that's all there was to it – and it made him feel awful.
Clearly aware that he was no longer wanted, Mephisto stood up, took note of the many women who were staring longingly at him, smiled and then looked down again.
'We will meet again soon,' he said smoothly, 'but not here… up there.' He pointed in the direction of the distant mountains. 'For up there, indeed, is where you will go, one way or the other. Now good night, my young friends.' He bowed slightly at both of them, then turned away and walked out of the lobby, looking very distinguished. When he had gone, Gerry turned back to Ingrid who, still flushed, obviously nervous, tried avoiding his gaze. 'Well?'

Gerry said, feeling hurt and choked up. ‘Well *what*?’
‘You obviously found our friend Mephisto to be pretty attractive. Or is that putting it mildly?’
‘Please, Gerry, stop this.’
‘I can’t stop this. I *saw* it.’
‘I couldn’t help it. You *know* I couldn’t help it! He even affected *you* that way! He can do it to *anyone*!’
On the one hand outraged, on the other Gerry felt humiliated that she had seen *his* reaction to Mephisto. ‘At least I managed to control myself,’ he said pathetically. ‘I didn’t make it that obvious.’
‘He released you,’ Ingrid responded, her cheeks now flushed with anger. ‘He can turn his sexual magnetism on and off, and he just let you go. He was playing with you, Gerry, you were sport, and then he simply released you.’
‘Christ!’ Gerry retorted automatically, ashamed of what he was saying. ‘I’m going to bed.’
Without giving her a chance to reply, he hurried across the lobby, collected his room key, then walked just as urgently to the lift. He thought he heard her calling him back, but couldn’t be too sure; however, he soon sensed her coming up behind him, so he walked even faster.
When he entered the lift, she slipped in beside him, staring at him with moist eyes.
They didn’t speak as the lift ascended. It only went up two floors. As they left it, Gerry thought of Mephisto, staying in the same hotel. A bolt of fear lanced through his anger, deflating him instantly, making him wonder, as he hurried along the corridor, just what he was dealing with. Still, his childish anger won out, defeating the fear for the moment, and after opening the room door and following the chastened Ingrid inside, he slammed the door loudly behind him and made her twitch visibly.
God, he thought, when she turned around to face him, *the bitch really is beautiful*.
And was ashamed to think that, especially the ‘bitch’ part, and stepped past her, farther into the room, to hide his suddenly burning cheeks.
‘To hell with it,’ he said. ‘I’m fed up with all of it. I’m sorry, Ingrid. I’m really sorry. It’s not you; it’s this whole business. What the hell’s going on? Who *is* that bastard, Mephisto? What’s his real relationship to St Germain? And why do we *still* have this god damned mystery, this catand-mouse game?

I'm just tired. I can't take any more of it. I want to sleep and forget it.'
Filling up with remorse, he turned around to kiss her. She kissed him back, then pressed herself to him, hugging him with a fearful desperation that gave him a shock. And then recalling how Mephisto had stared at her, his fear returned worse than over.
'Be very careful,' he told her. 'You have to try to resist that man. I think he's going to try to separate us, though I'm not sure why. So be careful when we meet him again. Think of him as a mesmerist, a hypnotist, and try to resist his demands on you.'
'I will, Gerry, I promise,' she said. 'Now let's *both* go to bed.'
Struck by the change in her, recalling what they had been through together, he reached out in a flood of emotion and passionately kissed her. The very feel of her inflamed him, but also filled him with more emotion; and relieved to be forgiven, brimming over with love and longing, he took off his clothes, watched her doing the same, sucked his breath in at the sight of her pale, curvaceous beauty, and lay beside her on the soft, yielding bed like a man resurrected.
He soon lost himself in her, finding protection from his fear, stroked her, fondled her, became a child again, then fell into the last peaceful sleep he would have for a long time.

The sound of a door clicking shut made him open his eyes again, and he grabbed automatically at the bed-sheets but found no one there. Glancing across the moonlit room, he saw the closed door, and knew without having to look elsewhere that Ingrid was gone.

'Oh, no!' he groaned.

Ripping the sheets off him, he slid out of the bed, dressed himself and rushed from the room, then took the lift down to the lobby. It was just after midnight, the lobby was deserted, and he was aware, as he hurried through the silence, of his heart racing dramatically.

'The lady sharing room twenty-four,' he said to the Bhutian desk clerk, who looked up in surprise. 'Miss Zweig. Did you see her just leaving here?'

He hadn't thought to check Mephisto's room. He knew it wasn't necessary. He knew, as his heart sank and pain swept through him, that Mephisto wouldn't be there.

And Ingrid had gone with him.
'Yes, sir,' the desk clerk said, confirming what Gerry had been thinking. 'She left a few minutes ago with the man from room fifty-eight. Mr Grabbe. He said you might be making enquiries. He told me to tell you that they've gone to Observatory Hill – though why they should go *there* at this hour rather baffles me, sir.'
'And he told you to *tell* me they were going there?'
'Yes, sir,' the clerk said. 'I was told to inform you.'
'Shit!' Gerry exclaimed without thinking. Then he hurried out of the hotel. It wasn't worth taking a taxi, so he started to run, first through the cluttered streets, then up the steep steps, eventually into the darkness and silence above the tumbling town. There was a great moon above him, a mottled cheese, appetizing, and around it the stars streamed like sparklers on a Halloween night. He ran, his heart pounding, intoxicated by dread, and looked up to see the slopes of Kanchenjunga, its snow-capped peaks gleaming. Moonlight and stars and snow merging into dark sky – he saw all of it out of the corners of his eyes as he raced through his own steaming breath in a state of blind panic. *He can't have her*, he thought.
He thought also, as he ran, of what they had been through together – their shared terror in the King's Chamber in the Great Pyramid at Giza; their mutual excitement and love in the British Museum Library; their fear and exaltation during their magical experiences in Greece, Turkey, Germany, France and Israel – and knew, as it all flooded back to him, that he would never forget it. What they had shared was part of him, *was* him, as he was Ingrid, and so he ran even faster, aware that he was being robbed, now knowing just how much he wanted her.
The town was now far behind him, leaving moonlight and silence, and when he looked at Observatory Hill, he was chilled to the bone.
There, on the dark breast of Observatory Hill, the Mahakala Temple, sacred to Hindus and Buddhists, was starkly silhouetted, not by the moon and stars, but within a great fan of pulsating, striated white light.
'Oh, God!' he gasped, hearing his own voice as a faraway echo, indistinct

and unreal. ‘Oh, Jesus! Oh, no!’
He ran more urgently up the hill, sweat dripping from his forehead and into his eyes, blurring his vision as he tried to see what was happening beneath the pagodas. Then a sob burst from him, unexpected and loud, when the fan of light shrank rapidly and became a glowing orb that abruptly shot off towards the mountains at remarkable speed.
He stopped running then.
It was hopeless and he knew it. That was Ingrid up there. She and Mephisto were racing away from him in that rapidly receding light. The light soon reached Kanchenjunga, stopped abruptly, moved sideways, then glided down, as if into a ravine, and suddenly blinked out, leaving nothing behind but what had been… the snowcovered slopes and dark clouds in a star-bright sky rippling with moonlight.
He couldn’t stop his tears. They rolled relentlessly down his cheeks. He wiped them away with his fingers, but kept sobbing as he did so; then continued wearily up the slope, feeling helpless and broken.
He walked uphill realizing what Mephisto had tried to tell him, finally knowing exactly why he would climb that mountain as Mephisto had said he would.
He would climb it for Ingrid, to get her back and prove his love… and when finally he stood on Observatory Hill, in the shadow of the Mahakala Temple, with the lights of Darjeeling burning romantically beneath him while the moon and stars cast their splendour into his weeping eyes, he choked back his pain but still wept like a child, then raised his right fist to the mountain and defiantly shook it.
‘Okay,’ he said. ‘*Yes*!’
He had made his commitment.

Chapter Four

‘So remember, Hans,’ Zweig said, stepping naked out of the shower on the sun-deck, glancing down at Elena where she lay in a bikini on one of the two sunbeds, then taking the towel extended by the Filipino steward, ‘when Kuragin arrives, say nothing about our affairs. Obviously he’s going to demand that we hand back what he’s given us, but I’ve spread it too far and wide for that – and besides, it *belongs* to me. So don’t mention anything

about our finances; let the fat pig stew in it.' Drying himself with the thick white towel, he looked up at the sky and saw the helicopter in the distance, glinting in the sunlight. 'Here he comes,' he said to Hans, 'so bear in mind what I've told you.'

Hans didn't reply and Zweig didn't expect him to. If anything, his young assistant had become quieter than ever since that incident in the Eforie Nord thermal treatment centre by the Black Sea, and Zweig, who had himself been disturbed by the incident (which had been so out of character and, like his temper tantrums, sometimes filled him with the fear that he was going mad) tried to hide his concern by convincing himself that it had given him yet another hold over his former accountant.

'So,' he said as he dressed, ' *has* the money given to us by the Soviets been completely disposed of?'
'Yes, Herr Zweig,' Hans said. 'The money has been placed in bank accounts in Switzerland, Gibraltar, Monaco and the Channel Islands, while many of the paintings and antiques have found their way into Christie's and Sotheby's in London and New York. Those that remain will be disposed of through the Biennale Internationale at the Grand Palais in Paris this year, and others will gradually turn up in the more reputable galleries of Florence, Milan and, again, London and New York. I can assure you, Herr Zweig, that the distribution has been extremely wideranging, and most of it will be difficult, probably impossible, to trace.'
'Very good,' Zweig said.
'You could have shoved some of it *my* way,' Elena said. '*I'd* look after it for you!'
'You wouldn't know the difference between one painting and another,' Zweig said. 'And you can't even count. But thanks for the thought.'
He was in fact growing more impatient with the whore's stupidity, and in keeping with his increasingly explosive moods often wanted to beat her. She had often whipped him in order to give him pleasure, but now he found himself wanting to whip her because she got on his nerves. She was a sexy bitch, yes, but his sexual desires were waning, and without lust to bind them together, he found her impossible.
'You don't have to be sarcastic,' she said as the helicopter, rapidly

approaching, started whipping the wind up. ‘I mean, I’m just bored, that’s all. It’s alright for you, playing tin soldiers on your island and boats, but *I* need to get back to a *normal* life, preferably on dry land. I’m fed up lying here, just drinking and reading novels, when I could be out *living*. I’ve had more than enough of it.’

‘The only dry land you’re likely to set foot on is the floor of a brothel in Recife – and if you don’t shut up, that’s where you’ll *end* up. Now is that understood?’

Instead of replying, Elena slid her sunglasses down her nose, stared defiantly at him, then slid the glasses back into position and eased her long legs off the sunbed. She then stood up and walked away from him, brushing past the steward and disappearing through the hatchway, into the master suite, to go below decks.

Zweig couldn’t help sighing, feeling weary and confused, not too sure of just why he had antagonized her so, but aware that he had been doing it often recently. His physical health was degenerating, his many capsules and suppositories were showing adverse side effects, and he knew that his terrible tantrums, which now came more frequently, were being caused by his general deterioration.

Perhaps he *was* going mad. It was certainly possible. And when he thought of that likelihood, of his imminent loss of control, he was filled with an overwhelming terror and heightened lust for the Tuaoi Stone.

He finished dressing, putting on long pants and a shortsleeved shirt, then squinted into the beating wind as the helicopter, roaring, settled onto the swaying helipad on the deck just below him. When the steps were lowered, Kuragin descended from the chopper and was escorted across the deck and in through the hatchway that led to the upper decks. The Russian arrived eventually, breathing heavily, his right hand outstretched.

‘Ah, Andropov!’ Zweig said, smiling falsely at the unsmiling Russian and shaking his hand. ‘How nice to see you again. Did you have a good flight?’

‘One flight is like any other,’ Kuragin said. ‘So how are you, Wilhelm?’

‘In good shape as always, my friend. Would you care for some schnapps?’

‘No, thanks. I never drink before lunch.’

‘Some tea, perhaps?’

‘You sound like an English gentleman in a country garden. Can we get down to business?’

Zweig gripped the railing beside him and squeezed it as if trying to crush it, though in truth it was Kuragin he wanted to crush. A violent spasm shot down his arm, made his fingers contract, then dissipated itself in the railing, after which he relaxed a bit.
'Of course,' he said. 'Naturally. I notice that the helicopter is still running. You intend leaving shortly?'
'Yes,' Kuragin said. 'I'm annoyed that I had to come here in the first place. It's a long trip to make – and one that should not have been necessary.'
'Would you care for a seat?'
'I'm happy standing, thanks.'
Zweig sighed and studied the azure sky, trying to look unconcerned. 'So why *was* it necessary?' he asked.
'We have been sending you telexes and communiqués demanding progress reports on your search for the socalled Tuaoi Stone, or Lodestone, and to date have received no response. We do not find this pleasing.'
'I'm doing my best,' Zweig said, 'but things don't happen overnight.'
'*Overnight* has nothing to do with it. It has now been quite a few weeks since you promised either a quick delivery of the stone or definite proof that it does not exist. This infraction would be bad enough on its own, but that all our attempts to communicate with you have been blatantly ignored has only incensed the comrades even more.'
'I confess,' Zweig said, defeated, 'that I didn't reply for the simple reason that I'd nothing to communicate. I *have* learnt the identity of the keeper of the Tuaoi Stone, but I don't know where he is. And unfortunately I lost track of my daughter and her American boyfriend in Jerusalem, where I tried to abduct them for intensive questioning. I haven't seen or heard from them since, but will find them eventually.'
'Ah, yes, *Jerusalem*,' Kuragin said acidly. 'We know all about *that* particular farce.'
Humiliated by Kuragin's mockery, as well as by the recollection of the incident itself, Zweig burned up with barely concealed fury. 'We all make mistakes,' he said lamely. 'And I can assure you, they will not escape a second time.'
'*If* you ever find them,' Kuragin sneered. 'There was no record of them having left Israel that day – we checked
– which means that they travelled under false passports. But where did they

go?’
‘We’ll pick up their trail eventually,’ Zweig said, taking a deep breath, controlling himself, and hoping to bluff his way, since in truth he didn’t know where to start.
‘So how do you intend finding them?’ Kuragin asked.
‘We’re running a computer check on the passenger lists of every aeroplane that left Israel within a week of the incident. Aware that they were using false passports and probably travelling under pseudonyms, we’re checking the destinations of every couple their age who either travelled together or took different flights to the same destinations. Should that fail to produce results, we will then check each individual passenger in that same age group. One way or another, we *will* find out where they went.’
Clearly, Kuragin was not impressed. ‘But that could take weeks,’ he sneered, ‘by which time they could have left and moved on again.’
‘We have to take that chance,’ Zweig insisted, feeling foolish and increasingly humiliated.
Kuragin banged his fist on the brass railing without thinking, then winced with pain and rapidly pulled himself together. ‘This is hopeless,’ he said. ‘Your daughter and the American could be anywhere in the world. They could even be still in Israel. It’s hopeless, just hopeless…’ He trailed off in disgust, scratched his blue-veined nose, glanced thoughtfully around him at the encircling fleet of other boats, all owned by Zweig, then turned back to offer his most frosty gaze. ‘But you *do* know who holds the Lodestone, or Tuaoi Stone?’
‘Yes,’ Zweig replied, relieved at last to be offering something positive.
‘So the stone actually exists?’
‘Yes. Definitely. And my daughter and the American will soon be have a meeting with its keeper.’
‘So, who *is* he?’
Reluctantly, though realizing that he had little choice if he was to appease the clever Russian, Zweig told him what he knew about Saint-Germain, including his extraordinary history and the magical powers he was reported to possess. Yet even as he spoke, he knew that he was losing Kuragin, could see it in his face, his rising incredulity, and so finished his tale, not with relief, but with deepening gloom.
The silence, after he had finished speaking, lasted a long time. Kuragin

simply stared at him, then shook his head from side to side, indicating his disbelief.
‘And you say this man has lived at least since the eighteenth century and can move back and forth through time and space?’
‘Yes,’ Zweig said firmly.
‘Do you *really* expect me to take this nonsense back to the Kremlin?’ Kuragin asked, sounding strangled.
Suddenly inarticulate, Zweig shrugged and raised his hands in the air, as if in surrender. ‘Well…’
‘I won’t do it, Wilhelm. I’d find myself in Siberia. We believe the Lodestone, or Tuaoi Stone, may exist, though we don’t know exactly what it is – its legendary powers could be material or simply symbolic; it may be some kind of extraordinary jewel or just worthless stone or crystal – but until we *know* for certain what it is, we have to continue to search for it… But this Saint-Germain… Do you really expect me to believe in *him*? That he’s hundreds, maybe thousands of years old and can defy space and time? Are you going mad, Wilhelm? Are you losing your mind completely? Expecting me to believe that, or believing it yourself, is surely a sign that you’re demented. What *is* going on here?’
Startled to hear Kuragin suggest the very thing he secretly dreaded – that he might be losing his mind – Zweig felt his heart suddenly racing to make his cheeks burn.
‘He really exists, I’m telling you,’ he insisted, almost stuttering. ‘I personally have been exposed to his magical powers, and I know that – ’
‘Enough, Zweig! *Enough*!’
Shocked by Kuragin’s vehemence – and by his contemptuous use of ‘Zweig’ instead of the more familiar ‘Wilhelm’ – Zweig glanced left and right, noted that Hans and the nearby stewards were staring studiously at the deck, pretending not to listen, and felt smouldering fury at the knowledge that he was being humiliated by this Soviet pig in front of his own men. Trembling, clenching his fists, taking a deep breath, he fought to control himself while Kuragin, his peasant’s face outraged, stepped close to him and stared directly at him.
‘And now I will tell *you* what’s going to happen,’ Kuragin said loudly, deliberately, so that Hans and the stewards nearby could hear. ‘Your time has run out, Zweig

– or *almost* run out. You have exactly one week from today in which to either produce the Tuaoi Stone or offer the final proof that it does not in fact exist. Should you fail to do so, we will be demanding the return of everything we've given you so far, and will also put pressure on the Western powers to classify this fleet of yours as unlawful, remove the boats from your personal ownership, and sequester all you own until such times as your finances, including tax returns, have been investigated. Since the Western powers are already finding you to be a considerable embarrassment to them, I do not think they'll ignore us. They will go for your whole empire, Zweig.'

He nodded emphatically, letting what he had said sink in. 'Do you understand, Zweig?' he continued. 'All of this…' and here he indicated Zweig's whole fleet with a circular wave of his hand… 'will disappear. And you will fade away with it… and eventually be nothing.'

'I don't – '

'Shut up, Zweig! Just keep your mouth shut. Don't say another word until I leave this boat. Now *I* call the shots.'

Zweig exploded. He simply couldn't help himself. The rage boiled up like a volcano, burned through his hands and arms, making him leap forward and grab the Russian by the throat. He started strangling Kuragin, banging his head against the bulwark, bawling, 'Who the hell do you think you're talking to? I'll *kill* you, you *schweine*!' Then Hans was shouting at him, tugging at him, pulling him off, and he had to remove one hand from Kuragin's throat in order to slap Hans away. He heard the sound of the smack, felt the stinging, saw Hans reeling, then Kuragin clenched one of his fists and swung a punch at him. He thought his head had split open, saw spinning stars, then felt his knees buckling under him.

'*Please*, Herr Zweig,' he heard Hans whisper in a frightened manner, helping him back to his feet, 'you mustn't do anything foolish or – '

Zweig slapped him again, saw him falling to the side, then clambered to his feet, swayed dizzily, feeling sick, as Kuragin stepped backwards to the nearest hatchway, whispering, 'You're crazy! Now *that* much is obvious! You're mad, Zweig – and you'll pay for this!'

Come here, you Rusian peasant! *Come here*! Just let me – '

He launched himself at that hated figure, but lost his balance and fell, felt pain and rolled onto his back and opened his eyes again. The sky was spinning above him, a white-and-blue whirlpool, and he found himself

shaking all over, felt nauseous and weak. *Heart attack*? he wondered fearfully. *High blood pressure*? *What*…? He almost sobbed, feeling defeated and frustrated, then saw Hans looking down at him.
‘Are you alright, Herr Zweig? What happened? Here, let me help you up again.’

‘ *Get that bastard, Kuragin*!’
‘It’s too late. He’s gone.’
Even as Hans spoke, Zweig heard the helicopter’s soft

throbbing turn into a roaring and knew that it was about to take off again. Humiliated even more, but taking strength from his rage, he lay there a few more seconds, until the sky had stopped spinning, then pushed himself up with Hans’ help and scrambled back to his feet.

He heard the helicopter, was pummelled by its slipstream, then was forced to watch it ascending and turn towards the west.

His self-pity was washed away by his rage and that, in turn, made him think of vengeance.
Watching Kuragin being flown away, he remembered World War II, his exciting days as a Hitler Wolfcub, then the abrupt descent into nightmare when the Russians entered Berlin. He had just turned eighteen, was a goldenhaired, handsome boy, and when he was wounded near the Tiergarten and trying to hide in a bombed-out cellar, a group of Russian soldiers found him and had some sport with him. They had squeezed and prodded his wound, poured salt onto the bloody flesh, kicked him repeatedly, cut him further with bayonets and then finally raped him.
The last had been the worst: a nightmarish, painful degradation, and when they’d had their way with him, one after the other, they had left him for dead in the ruins and gone off for more prey. Naturally he hadn’t died. He had been kept alive by his hatred. First hatred of the Soviets, then of all humanity, and it had helped him cast off the last of his decent feelings and seek only brute self-satisfaction, no matter who paid for it.
Now, as he watched the helicopter taking Kuragin away, that same hatred returned on a wave of painful recollection and gave him back his strength.

‘Damn you, *no*!’ he exploded, shaking his fist at the helicopter, then he ran to the telephone on the bulwark, picked it up and screamed into it, ‘Get that helicopter! Shoot it out of the sky! You hear me? This is Wilhelm Zweig talking! *Shoot that helicopter out of the sky*! Do it now! *Destroy it*!’
‘No!’ Hans exclaimed fearfully into his right ear. ‘If we do that, the Soviets will – ’
‘Be quiet, Hans. *Shut up*!’
He slammed the phone down, grabbed Hans by his shirt collar, shook him violently, bounced him off the bulwark and then cast him aside. Hans fell to the deck and rolled onto his back as the missile launcher, making a humming sound, emerged from its opening steel covering like a giant silver bullet. Zweig stared at the sky and saw the helicopter reflecting the sunlight as it headed towards Ascension Island. He shook his fist at it, screamed more obscene abuse, then heard the SAM missile leaving its launcher, saw its smoke-trail shooting upward like a ball of thread to form a great loop. Then the helicopter exploded and became a smoke-ringed ball of fire that caused debris to fly out in all directions and fall into the sea. The ball of fire disappeared, the smoke drifted away, eventually revealing a sea littered with debris.
‘Oh, God!’ Hans muttered in horror. ‘We’re finished. We’re done for.’
The sound of that voice – and the unpleasant truth it had expressed – enraged Zweig even more. He hurried across the deck, to where Hans was sitting upright, and grabbed him and hauled him to his feet and started slapping his face. He kept slapping and bawling, losing himself in the process, hovering somewhere above and looking down upon himself beating Hans. It was like playing with a rag doll, something light and loose, and he slapped it, threw it against the bulwark, watched it fall and then kicked it.
‘We’re *finished*?’ he bawled at the bloody thing at his feet. ‘We’re done for? You think the Soviets are going to avenge that bastard’s death by destroying my empire? Well, they won’t! I won’t let them! Those Russian pigs will get nothing. I now know enough about the Lodestone to know I don’t need *them* anymore. *I’ll* find the Lodestone. And I’ll do it myself this time. I’ll find Ingrid and the American *and* Saint-Germain, and when I’ve done that I’ll put an end to them and make myself the keeper of the stone. You think I’m *finished*, you defeatist bastard? Well, I’m not, I’m just *starting*! Now get back on your feet!’

Hans did as he was told, rising painfully, his face bloody, his eyes blazing with uncommon fury out of badly bruised flesh.
Zweig noticed, but didn't care, thinking only of the Lodestone, the legendary Tuaoi Stone, and turned away to take hold of the railing and look up at the sky. Strands of smoke were still drifting. Below the smoke, the sea was littered. He studied that wreckage, felt a deep satisfaction, then looked at his fleet of cruisers, the very heart of his worldwide empire, and accepted that what he had done had put him beyond the pale.
Now he had no choice. He had nothing more to lose. He would go in pursuit of them himself, no matter the risk.
He would find the Lodestone.

Chapter Five

Even here, on the lower slopes of Kanchenjunga, Gerry already felt very different from what he had been just five days ago. While his two Sherpa guides stopped to let their mules rest, he looked back at the winding Tista river, lowlying tropical jungle and the higher forested hills of Sikkim, through which they had travelled to get to here. He could scarcely believe that beyond was the town of Gangtok, surrounded by rice-and-maize fields, where he had picked up the Sherpas, and farther on, south-west of that, Darjeeling, where he had lost his beloved Ingrid and which now seemed like five years, not five days, ago.

Choking up thinking about that, he turned back to the Sherpas and looked beyond them, to where the forested hills gave way to the almost barren slopes of the mountains with their snow-capped, cloud-shrouded peaks. They looked dauntingly high and decidedly challenging, and he shivered, hardly believing that he was heading there, feeling slightly demented.

One of the Sherpas nodded at him and they moved forward again, heading up, so the guides had informed him in broken English, to a Sherpa hill station located high in the Tibetan Plateau but well below the mountain's glacial peaks. He had told them that he wanted to go higher than that, but they had vehemently refused, saying that the mountain was 'possessed' and forbidden to mortal men. He therefore didn't know what he would do when he reached

the hill station, only knowing that he had to get as far as he could and then hope for the best.

Trudging behind the Sherpas and their heavily laden mules, feeling the deepening cold starting to bite at his nose and ears, yet still sweating from exertion in his furlined leather overcoat and hide boots, he was relieved that they were nearing the hill station on the plateau, since already they had been climbing the lower slopes for two days and he felt badly bruised and exhausted, not capable of going much farther without a good rest.

When he glanced around him at the increasingly desolate scenery, the rolling hills with sparse scrub, the green slopes receding below him, the sky grey and malignant, his feeling of divorce from the self only became more acute.

Indeed, when he thought back on how he had come here – a taxi from Darjeeling to Gangtok; a restless night in the Tashi Delek hotel, then a hired Land Rover the next day to take him through the richly forested Tista valley to the Sherpas' base camp at the foot of the Tibetan Plateau; then being fitted with clothing, the Sherpas giggling at his inexperience; then two days and three nights on the lower slopes of the mountain, leaving the greenery behind and moving up into the barren, brown hills, not believing where he was when he lay at night beneath the stars, seeing the sky as through an inverted telescope, far away, shrinking rapidly – yes, when he thought back on all of that, it seemed like a dream, no more substantial than the wind that crossed his path and passed on invisibly.

Sweating even as he shivered with cold, he saw, across the slopes, some *kyangs*, wild asses, with their noses nuzzling the earth. They looked sleek and well fed, as all the animals on the plateau did, and he wondered what they could find to eat in this arid wilderness. Raising his eyes, he looked at the soaring slopes, first ochre, then glistening white, the melting snow forming a web of streams which, when viewed in a certain light, turned into a great, glittering necklace suspended in space.

He rubbed his eyes, licked his chapped lips, imagined his teeth were aching, realized that he had started imagining a *lot* since beginning this journey. He

hadn’t been sleeping well because he had felt that he was being watched; he even felt that in the cold light of day when the tiredness took hold of him.

He had cursed himself for his lack of exercise in the past, for not looking after his body, and accepted that some of his worst imaginings were the price to be paid for that. He had ached and breathed harshly most of the way up these hills, and knew, with a helpless, throttling dread, that he hadn’t even begun yet; that the real climb was past the hill station, where the browns and greys turned into a glistening white that sometimes soared almost vertically.

When he thought of going beyond the hill station, he felt dread and disbelief. Closing his eyes, he tried imagining New York City, his mother’s luxury apartment, his own untidy, beloved bedroom, yet he couldn’t really visualize it, but only a blur of vague details, as if viewing it through a smeared lens. It was too far away, too much a part of what he had been, and he knew, as he heard his own heartbeat, that he was now someone else.

Now he was part of Ingrid, as she was part of him, and both of them were part of St Germain and the network of riddles and clues that he had spread far and wide, from the Great Pyramid of Giza, the terrestrial centre of Earth, to Jerusalem, the centre of the spiritual world, and finally to here, where the mountains, with their snow-capped peaks in the clouds, held the answers to all of it.

When he thought of Ingrid, and of what they were involved in, he was shaken by a terrible anguish and disturbing confusion, since he also thought of Mephisto, alias Christian Grabbe. He had hoped she could resist Mephisto, that his own love would give her strength, but she had gone with the mesmerist in that magical light, resplendent as a star, to disappear into the mountains’ most secret place.

The question was: Why?

Had she been hypnotized or wide awake? Had she just wanted him with an overwhelming desire? Or had he abducted her?

Thinking about it again, Gerry truly hated Mephisto, loathed his Machiavellian charms, while thinking of Ingrid with a mixture of anger and heart-numbing grief.

He opened his eyes again, saw the backs of the Sherpas, looked beyond them to see the track levelling out onto a broad plateau sheltered by soaring hills.

In that protected space there were half a dozen shacks, made of brick and mud, with roofs of corrugated iron, smoke trailing out of their chimneys and streaming off in the wind. It was obviously the hill station. Donkeys were tethered to posts outside the huts; Sherpas and mountaineers were wandering about the clearing.

The Sherpa guides tethered their mules to a wooden post outside a hut which other men, mostly mountaineers, were entering and leaving with great regularity. Since it was clearly a bar or café, Gerry wanted to go inside, but the English-speaking guide tugged him back and shook his head in denial.

'You won't go higher up the mountain,' Gerry said accusingly to the guide, 'but those mountaineers will.'

The Sherpa shook his head again in a negative gesture. 'No,' he said. 'No good for you.' He then pointed to indicate the mountain peaks in the west. 'There,' he said. 'The mountaineers climb there. But you…' and here he jabbed his finger at the peaks to the east… 'You must go there, where those men do not go. You must go where noone else has gone – and *they* cannot take you. Come! You come now.'

Before Gerry could refuse, the Sherpa grabbed him by the elbow and guided him across the clearing, through the ink-black shadows cast by the soaring hills, to the door of a dilapidated plank-hut whose chimney was smoking.

'In here is the old wise one,' the Sherpa said. 'He who goes where we cannot go. He once belonged to a monastery, but came down from it years ago. He lives alone and meditates, and knows the secret places in the mountains where we Sherpas will not go. Maybe he take you to the first monastery, maybe not. If he do, he will not take you higher than that, since he frightened as well. It is the land of the dead up there. Now you go. Go inside.'

Without knocking, the Sherpa opened the door of the hut and pushed Gerry inside, letting the door close behind him, swinging shut from its own weight. The inside of the hut was gloomy, being illuminated only fitfully by two spluttering oil lamps, and the air was further darkened by the smoke billowing out of a log fire.

Gerry coughed into his fist, rubbed the tears from his stinging eyes, smelt urine and then squinted through the smoke at the old man who was squatting on the earthen floor, near the flickering flames. He was very old indeed, his face like a wrinkled walnut, and he was wearing a darkred, Napalese robe, belted at the waist, over thick black woollen trousers that were tucked into

leather boots.
He was rocking to and fro, chanting softly to himself, but eventually, when Gerry coughed again, he stopped rocking and looked up, staring steadily with rheumy eyes at his unexpected guest, but not saying anything.
‘You speak English?’ Gerry asked him.
‘I do,’ was the reply. ‘You have come here to find the first monastery and search for those who dwell higher up.’
Startled, Gerry took a deep breath, then let it out in a sigh. ‘You *knew* I was coming here?’
‘Of course,’ the old man said. ‘I am always informed. They speak to me across the great divide when I venture down through my centre.’
‘You mean, when you meditate?’
‘Yes.’
‘They communicate by *thought*?’
‘That is so. I am informed when someone is coming and needs to be shown the way.’
‘The way to the monastery?’
‘The way to the *first* one, yes. The one *you* want is even higher.’
‘How do you know which one I want?’
‘You are one of the pure at heart. You have come here to search for truth. To find that truth is an arduous task, requiring courage and strength. If you succeed, you will find what it is you most want; if you fail, you will return back down the mountain and know nothing but misery.’
‘And you’ll take me up there?’
‘I will only take you close to the first monastery; after that, I will leave you. I am not allowed inside the monastery, since I am not pure at heart.’
‘The monastery is a halfway house?’
‘More than that: a house of learning. But from there, you must climb even higher, into the zone of the dead.’
Gerry saw his own shadow elongated and stretched up the plank-wall, a giant figure, trembling to the rhythm of the flickering flames. That shadow was himself, just as he was *not* himself, and as he gazed down at the old man, who was ghostlike in the smoke, he felt removed even farther from reality, as if no more than a player in a bizarre, wideawake dream.
‘Is that where I’m supposed to go?’ he asked. ‘To the zone of the dead?’
‘What will be, will be. You will attempt to go there. Whether or not you will

succeed, I cannot say.’
‘Is St Germain up there?’
‘I know no names. Only that they *are*. I only *hear* them, though sometimes in meditation I see them as well. They are of every nationality, every creed, but they all sound the same.’
‘They speak English?’
‘It is not a spoken language. It is sound in the head.’
Gazing down at the old man, who seemed too frail to climb anywhere, Gerry thought of the visions he’d had of St Germain, of the reality of his presence, his voice, when he stepped out of the shimmering light. He had clearly heard the voice of an apparition, just as he had with Mephisto. Was this madness or truth?
‘So to reach that hidden place, the zone of the dead, I have to first pass through the monastery?’
‘Yes, that is so.’
‘Then someone from the monastery will take me higher?’
‘No. You must make the climb yourself. It is part of the test.’
Gerry thought of Kanchenjunga, of those towering, snow-capped peaks. He felt crushed even thinking about them. He felt the sharp blade of terror.
‘I can’t get up there on my own. I know nothing about the mountains. I’m not equipped and I don’t have the experience. What they demand is impossible.’
‘Nothing is impossible where the heart decrees otherwise. If you want it enough, you will do it. Failure is a sign of bad faith and contains its own punishment.’
Gerry wondered what could be more punishing than having to climb that mountain, then realized that he didn’t want to know, that some futures were best ignored.
‘You say you’re informed when someone is coming. Does that mean I’m not the first?’
‘Of course you are not the first,’ the old man replied, almost contemptuously. ‘They have come here, one by one, over the centuries. More will come with your passing.’
‘Are you always the one who receives them?’
‘No. I am of the Earth. I live the life of a normal mortal. But my father and his fathers before him were here to receive.’
‘When do we leave for the first monastery?’

‘When I get to my feet.’
‘I’m tired. I need to eat and drink.’
‘No. You just *think* that.’ As if to prove his point, the old man, who had seemed so frail and weak, sprang to his feet with surprising agility. ‘Hunger and thirst are much exaggerated,’ he said. ‘And tiredness is only a state of mind that can be easily defeated. This you will soon either learn or not, and if not, you will come back down. My name is Yaksa.’
‘Hi,’ Gerry said automatically, then, feeling foolish, added, ‘Gerry. My name is Gerry.’ He didn’t put out his hand, but simply grinned at Yaksa, to which the old man responded with an almost imperceptible nodding of his head, before brushing past him and opening the door of the hut.
‘We’re going right now?’ Gerry asked him as a blast of freezing air rushed in.
‘Why wait?’ Yaksa replied.
Apart from hunger, thirst and increasing exhaustion, both physical and mental, Gerry knew, the minute he stepped outside, why he had wanted to wait.
It was late in the afternoon and already growing dark, and when he looked beyond the huts, at the soaring mountain peaks, he saw the great shadows creeping down as the sun quickly sank. Now the mountains looked more ominous, mysterious, certainly dangerous, and as he followed the old man across the clearing, his heart sank like the sun.
‘We won’t be able to see,’ he said shamefully. ‘It’s too dark to go up there.’
‘I can see in the dark,’ Yaksa replied, ‘and you will learn to do so. The object is not to perceive, but to lean on your faith. Do not trust your eyes, trust your senses, and thus choose the right path.’
‘If there are paths, why do others not go up there?’
‘Because they depend on their eyes and the eyes reveal little. The paths are like our souls, divided into good and evil, and you must make your choice, left or right, by what your senses reveal. In this way, you faith will be judged. Now be quiet. We must concentrate.’
Gerry shut his mouth, feeling as if he had been slighted. He kept his eyes fixed on the old man’s back as they walked away from the camp. The flat road climbed soon enough, curving up between the hills, and gradually the hills closed in upon them and formed two towering walls. The walls shadowed the path, the shadows darkened, turned black, then a ribbon of stars materialized above, given shape by the jagged cliffs.

The moon moved along that ribbon, disappeared, reappeared, seemed to pace them, remaining directly above them like a malevolent eye. Gerry lowered his gaze, feeling spied upon, naked, saw stones that looked like polished glass spinning over his boots. His own breathing seemed too loud, an oddly amplified discordance, and he imagined that he could hear his heart beating, then tried to forget it.

The old man was still there, just ahead of him, moving quickly, surprisingly agile for someone his age, and with the eyes of a cat. He stopped where the track forked. Gerry took the right turning. He didn't know why, indeed hardly thought about it, and was surprised to find the old man by his side, his smile revealed by the moonlight.

'Very good,' he said. 'Faith.'

Time seemed to stop. Space closed in upon him. The track became narrow, very steep, full of bends, and the wall to his right gradually shrank and disappeared, until there was nothing but darkness below, an umbrella of stars above. The track was curving around a cliff face. He was certain of that. He had a moment of vertigo, of fleshscorching dread, stopped to press himself into the cliff face on his left, then saw the old man's smile. That calmed him instantly, making him feel ashamed, and he grinned back and stepped in front of the old man and started uphill again, aware of the deepening cold, the snow-capped peaks moving towards him, convinced that he was divorced from time and space, at the top of the world.

'Are you tired?' the old man asked from behind him, no trace of breathlessness in his voice.

'Yes,' Gerry replied, gasping. 'I'm damned near exhausted.'

'Let yourself dissolve into the night. Become *part* of the mountain. In that way, you will conquer it. What is willed, will be done.'

He did as he was told, tried to will the exhaustion away, felt foolish, then almost tripped and fell into that vast, ink-black void. Terrified, he jerked awake, all his senses resurrected, felt the pores of his skin opening to drink in the icy air.

He dissolved into the air, let its coldness percolate him, and felt the track melting beneath his feet as if no longer solid. It was still there all right, illuminated by the moonlight, disappearing between a high-walled crevice that offered protection on both sides. He advanced into the crevice, saw the band of stars narrowing, came to a fork and took the left path, knowing

instinctively that this was the right way.
He didn't have to think about it. He had dissolved into the mountain. He glanced up at the snow-capped peaks, gleaming distantly, hardly real, and was drawn to the starlit darkness around them, to that cloud-covered grandeur.
She was somewhere up there. The girl he loved. His Ingrid. Her image shone like a beacon in his mind and guided his footsteps. He wondered what had become of her, prayed to God that she was safe, sensed that she would be, that her presence up there was the carrot being dangled before him. He smiled, gaining strength, losing himself in the process, saw the ribbon of stars growing wider above the clifftops, the snow-capped peaks looming ever larger as he made his way uphill.
The track forked again. He turned left without thinking. He felt light-headed, confident, released from his aching body; but then the climb became more arduous, the track rising almost vertically, and the exhaustion, which he had thought had gone for good, returned worse than ever.
He fell to his hands and knees, heard the old man chuckling behind him, felt rage and clawed his way up the steep incline and then felt the snow. He stopped and saw the snow beneath him, then saw it above him, a luxurious carpet covering everything, white and glittering in the moonlit darkness, deceptively beautiful.
'Shit!' he whispered to himself, giving voice to his frustration, then glanced back over his shoulder, saw the old man's smile, stoked up his defiance and advanced on hands and knees, into the biting cold. He had not gone very far, though it seemed to be so, when large snowflakes started falling about him, lying upon him and soaking him.
The real misery began then, eating into his body and spirit, making time slow down to a standstill, each metre a mile. Sometimes he managed to walk, stooped over against the wind, but often had to fall back on his hands and knees, when the track became too steep. It rose and fell frequently, curved around sharp-edged rocks, became lost under thickening snow as more snow fell about him. He felt battered and bruised, his strength draining away from him, sobbed when his numbed fingers started stinging and his lips cracked and bled. He looked up, squinting, saw snow falling from the moon, the stars all around it dropping snow, the peaks hiding beneath it.
He tripped then and fell, lay face down, weeping quietly, determined not to

move another muscle, content to die there. Then something dropped on his right shoulder, took hold of it and shook it; he turned his head and saw Yaksa's gnarled hand, his walnut-brown face.

'You have done well,' he said. 'Very good. Come. Follow me now.'

With surprising strength, the old man pulled him to his feet, wiped the snow from his face, smiled, then nodded and proceeded to lead him up the steep path. Gerry fell in behind him, automatically, in a trance of gratitude, lumbering uphill through the cutting wind and swirling snow until the track started levelling out. He glanced back, saw the snow-covered rocks, and below them a vertiginous darkness towards which he was irresistibly drawn. At that moment he was convinced that the Earth was not down there, but only boundless space; that somehow they had left the real world behind and were advancing into another world. Looking up, he saw the moon, a great eye staring at him, but the stars, which were weeping snowflakes, were not the stars that he knew. He was disorientated, felt as if he was looking *down*, actually did so and thought he saw the sky that he knew, but as if it was reflected in water, its moon and stars clearly visibly. Then he felt a stab of fear and turned away and hurried after the old man.

Now everything was mountainous, but white in the moonlight, the crags and outcroppings like gargoyles, the stars, which were not the stars he knew, forming a glittering, fairy-tale tapestry around the peaks towering over him. He felt light-headed and lost, torn from his anchorage, cast adrift; and as the biting wind grew stronger, as the falling snow thickened, his stinging flesh lost all sensation and his reasoning slipped away.

He saw Yaksa in front of him (or thought he did; he wasn't sure) and then the snow swirled about him, filling his mouth, blinding him, and he rubbed his eyes and looked uphill again and saw nothing but more snow.

Yaksa had vanished, leaving him all alone, and he cried out in panic, calling the old man's name, heard that name borne back on the wind and felt it slapping his face. He recoiled from that blow, since in fact it was his terror, then hurled himself forward in desperation, praying for comfort. No comfort was to be found – the old man had disappeared – and all he found was the snow-covered track winding into the darkness. He followed it, fell upon it, crawled uphill, his lungs on fire, seeing nothing but the soaring mountain peaks, the stars streaming around them, the snow pouring out of the large moon that glared down malignantly.

The wind howled, the snow fell. His body was numb, his mind screaming. He crawled uphill, sobbing, wanting to give in, unable to, impelled onward by the brightening image of Ingrid that floated in front of him.
It was his rage that kept him going. He was refusing to let them keep her. He imagined her, saw her, felt her, was rescued by her, then he fell forward in exhaustion, started rolling downhill, gathering snow as he went.
He waited for that final drop, his endless descent down the mountainside, the death that would be his when he plummeted to earth – and so closed his eyes, expecting it, whispering, 'Ingrid, my love – ' and then ploughed through soft snow, stopped moving, choked and coughed, spat snow from his mouth, rubbed his eyes and looked up in wonder.
He had rolled down an incline, creating a cloud of powdered snow, and as that white veil floated around him, obscuring his vision briefly before settling down, he saw in the white-flecked moonlight an edifice of stone and mortar, its chortens like small pyramids – a Tibetan temple, a monastery – materializing out of the moonlit darkness as the snow ceased to fall.
He lay there, beneath the moon and stars, above the blackened, lost Earth, listening to his own heartbeat.
There was that… and the silence.

Chapter Six

He climbed painfully to his feet and noted that he was on a flat plateau above a precipice beyond which he could see nothing but darkness below a sky filled with glutinous stars. The biting wind had died away and now the silence was complete, emphasizing his feeling of frightening isolation, his conviction that he had somehow left the real world and was living a dream.

Then he looked at the monastery stretched out below a towering cliff face. It was constructed from stone and *chan*
– Tibetan moulded clay cement – and was composed of a series of block-shaped, flat-roofed buildings surmounted by elaborate pagodas and dominated by its great buoy-shaped chorten – a dome-like stone structure symbolizing the one Buddha – which, though also covered in crisp white snow, was undeniably exotic and formed a gateway into the monastery courtyard.

The monastery looked unreal in the moonlight, a mirage wrapped in snow. Feeling unreal himself, certainly bruised and exhausted, he tramped the short distance to the high gate chorten, walked through it, crossed the courtyard in which some shaggy, horned yaks were tethered, then stopped in front of the door directly facing the gate. There was a bell cord hanging beside the door, and he tugged it and waited.

He stood there a long time, shivering with cold, feeling drained, but nobody came to the door. So then, on an impulse, he simply pushed it… and it swung open, creaking, letting striations of weak, flickering light beam out into the night.

He stepped inside, closed the heavy door behind him, and then looked around him.

He was standing in an immense, austere assembly hall, the floor and walls of which were plain stone and mortar, partially covered by two carpet-sized wall-hangings made from brown yak wool and decorated with a series of white swastikas whose right-angled flanges, he realized instantly, were running anti-clockwise instead of the other way, indicating that they were in this instance Hindu swastikas, not related to their unpleasant Western counterparts. Lined along each wall, from one end to the other, like soldiers keeping vigil, were high, ornately carved stands upon which burned many tall, fat candles of every colour, giving off a smell like incense. At the very far end of the hall, close by another large door that obviously led into the inner sanctums of the monastery, were rows of long brown tables, all neatly laid out with plates and earthenware jugs, as if ready to seat a few hundred monks, though there was no one in sight.

Realizing that this was so, and thinking it odd, he stepped farther into the hall, heard his own footsteps echoing, and looked up at the balcony that ran around the great rectangular hall, high up, below the ceiling in which a skylight of ornate tinted glass was an eye-catching focal point. Behind the darkly polished wooden railing of the balcony were a series of chapel-cells, obviously used by the presently absent monks, their small bay windows crisscrossed with wooden laths arranged in intricate patterns.

He called up to those small rooms, hoping that *someone* was there, but the only response was the ghostly echo of his own voice, resounding eerily under the roof before fading away.

Feeling very strange indeed, he continued along the great hall, his hide boots

almost sliding on the flagged stone, until he had reached the rows of long tables. Stopping, he examined the nearest table and saw that the plates and utensils were perfectly clean, but covered with a fine film of dust, as if they had not been used in a long time. He called out again, his voice echoing, 'Hello! Hello!' Then he walked through the doorway beyond the last of the tables, into a deeper gloom.

He was in another rectangular hall, though this one was much smaller. The walls were covered in more hangings decorated with the Hindu swastika and more tall, fat candles were lined along each wall, though no balcony or chapel-cells could be seen above, but only a flat, unadorned roof which, in this case, had no skylight. However, at the far end of the hall, in the wall directly facing him, was an open door surrounded by latticed windows, and from inside the room came what sounded like a monk chanting prayers. Feeling a rising trepidation, not sure what to expect, he walked along the hall, stopped by the open door, and looked into a smoky, candlelit gloom to see a bald-headed monk, wearing a faded crimson wraparound coat, a *chuba*, and with a ceremonial silk scarf, a *katu*, hanging down to his waist. He was seated cross-legged on the floor, his back turned to a Buddhist shrine, and chanting prayers as he rocked gently to and fro.

He stopped chanting the instant he became aware of Gerry's presence. Straightening up, he raised his face as if looking at him, but then tilted his head a little to the side, as if locating the visitor's whereabouts by listening – since, like the old seer in al-Hillah, this lama was blind.

At first Gerry was too shocked to say anything. That the lama was blind was shock enough; even more shocking was the fact that he was so thin as to be almost translucent, his veins frighteningly visible though skin that was stretched on his bones like plain tissue paper. This man was rag and bone, an apparition at death's door; he had faded away to nothing and seemed to float just above the floor – though this was an illusion.

'You are the Westerner,' he said, his voice barely no more than a whisper. 'You came – as expected.'

'As expected?'

'I was informed from above.'

'St Germain?'

'I do not know his name. He is my *tulpa* – my guide to the other world. And he said you would come here.'

‘How did you know it was me?’
‘You are standing right there in front of me, so why should I *not* know?’
‘Aren’t you blind?’
‘I can see you with my third eye – my mind. I am only blind because I have meditated here for many years and no longer need normal sight. Here,’ he added, pushing an earthenware bowl towards Gerry’s feet. ‘Be seated and eat. The food and drink were prepared for you when your arrival at the outer door was witnessed.’
‘Witnessed by *who*?’ Gerry asked as he sat crosslegged on the carpeted floor, pulled the bowl closer to him, and saw that it was filled with rice and *dahl* – lentils boiled in a little curry. It smelt delicious and almost made him reel with pleasure, so he tackled it greedily.
‘Some of the other monks,’ the lama said simply, as if that fact was self-evident.
‘So where *are* the other monks?’ Gerry asked between mouthfuls of food.
‘The other monks, who are few, are not allowed to approach you; they must not be touched by anything foreign, nor even be led to think about the outside world. I am the Head Lama, their spiritual teacher, which gives me the right to speak to you. I have transcended temptation of any kind.’
While Gerry scooped up the rice and lentils with his fingers and awkwardly pushed it into his mouth, the blind lama picked up a long-necked pitcher and poured its contents into two earthenware cups, one of which he handed to Gerry, the other being raised to his own lips. The liquid in the cup was bubbling slightly, smelt a bit like cider, and when Gerry had sampled it, following the lama’s example, it tasted absolutely delicious and went straight to his head.
‘I no longer eat,’ the lama said, ‘but am still allowed drink. Alcohol in moderation can truly warm the hearts of men, and this is *chang*, brewed from barley, yeast and water, which will help to sustain you. You will speak with me and then you must leave immediately, which is why you must eat and drink.’
A second sip of the *chang* made Gerry feel even better, almost rejuvenated in fact, and he scooped up some more rice and lentils and ate while they talked, feeling the return of his strength and optimism, a pleasantly drunken intoxication, an increasing lightness of spirit.
‘Have you ever been higher than this monastery?’ he asked the blind lama.

‘No. I came up to this monastery as a child and have not left it since. No monk in this monastery has climbed the mountain, since the gods reside there.’
‘You’re a Buddhist,’ Gerry said, between mouthfuls of rice and *dahl*, ‘and I don’t understand how that relates to those who seem to guide you from above. Are they Buddhists, too?’
‘Buddhism is not a religion in the Western sense of the word; it does not speak of God or the soul as you conceive them, but is a doctrine that can encompass many faiths. It is based on the belief that life is an illusion of the senses, an imperfect state, and that only Nirvana, the absolute truth, is real. Those above, with whom I communicate through my third eye, have achieved the state of Nirvana. They are not Buddhists, but have transcended the material state and can roam freely at will.’
‘In an out-of-the-body state?’
‘That is so. And it is what I am suffering for. I have lost my sight because I no longer need it, I have not eaten in years in order to free myself from the flesh, and soon I hope to transcend my mortal body and rise to Nirvana.’
Studying the lama’s almost incorporeal body, Gerry was reminded of Mary Anne Atwood’s description of alchemy as being a philosophical system which, ‘by fermenting the human spirit, purifies and finally dissolves it.’ The body of the old lama did indeed seem to be dissolving, as if, over the years, he was evolving through meditation and lack of physical movement into a form of pure mind… just like St Germain.
‘What kind of Buddhism do you practise in this monastery?’
‘It no longer matters,’ the old lama replied, sipping some more of his *chang*, his large eyes staring sightlessly. ‘We live by the rule of numbers – ’
‘Alchemical numbers?’ Gerry interjected.
‘Yes – and our meditation, which is based on the contemplation of such numbers, will lead us to that ultimate transformation, from flesh into spirit. We originated, I believe, from the Amda Tibetan Buddhists, reportedly once the rulers of the known world, a nation of kings.’
Having finished his food, Gerry wiped his hands on his jacket. He felt drunk, not only from the *chang*, but from what he was hearing.
‘Do you seriously believe that?’ he asked.
‘Yes,’ the lama replied. ‘The world of Man is older than those in the West believe, and it originated here, 200,000 years ago, when this landmass was

joined with another, now known as Africa. That great race spread out from here as far as the islands of the Atlantic Ocean where it formed another great nation which, though ruled by magic and faith, was eventually destroyed. Those above are the descendants of the survivors of that mighty destruction. They returned here, to their origins, many years ago, and are protecting the Knowledge.'

'The Secret Knowledge?'

'Yes.'

What the lama was saying supported what Gerry had already learned.

'Have you ever heard of Atlantis?' he asked.

The old lama actually smiled. 'Many tales are told about it,' he said, 'most of them untrue. There is no single Atlantis. Many civilizations were lost throughout history, but they all began here.'

'And was that civilization a magical one?'

'What may be magical to you may be normal to others.'

'You can see through your third eye,' Gerry said. 'Did the high priests of that former civilization have similar gifts?'

'They believed in the contemplation of numbers and derived their power from them. They had a sacred stone that was constructed to the dimensions of such numbers, and that stone, both symbolically and materially, was the source of their ability to read minds, dematerialize themselves and others, leave the mortal body behind them, and transcend space and time. In that sense they were a magical race, but to them it was normal.'

'Was that stone called the Lodestone, or Tuaoi Stone?'

'The Lodestone is the Western name for it. Its true name is the Tuaoi Stone.'

'Do you know if that great civilization ever settled in Egypt?'

'So it is written. The Tuaoi Stone was pyramidal, its dimensions magical. The pyramid, though without those original dimensions, thus became a common structure throughout that great civilization. Even here, in India and Tibet, our chortens are shaped like elongated pyramids. In this manner, then, there were once pyramids on the islands of the Atlantic Ocean and the Mediterranean Sea; and according to what is written, the Tuaoi Stone once surmounted a great pyramid in Egypt, at the world's very centre. Now it is back where it belongs – up there, where no mortal goes with the hope of returning.'

He nodded, indicating the ceiling, meaning the mountain peaks outside.

'So the adepts, the high priests of that civilization, returned to their home

high in the mountain, where they protect the Tuaoi Stone and its Secret Knowledge?'
'Yes, that is so.'
'And those adepts can transcend the material state?'
'Naturally.'
'Do you know the number 666?'
'Yes. It is the magical number upon which the dimensions of the Tuaoi Stone have been based.'
'It is also known as the Number of the Beast.'
'It is only called that in your Bible. It is not so called by others.'
'In our Bible that number refers to a beast coming up out of the Earth and another beast coming out of the sea. What beasts would they be?'
'I have not read your Bible, but discussed this with others. The beast coming out of the Earth is clearly a volcanic eruption, or earthquake. The beast coming out of the sea would be the great tidal wave caused by such an earthquake. The previous civilizations of Man, those of prehistory, were all destroyed by volcanic eruptions, earthquakes and the immense tidal waves created by them. So the number refers to the destruction of those civilisations. But please note that in your Bible, in *Revelations*, it is stated that the number of the beast is also the number of *the man* – in other words, again, the civilizations of Man that were destroyed before our history was written. Thus do magical numbers tell their tales to those who can read them.'
'And what of those, like me, who can't do so?'
'You are venturing up there to learn.'
'Do you believe I can make it up there?'
'If it is willed, it will be.'
The rice and *dahl* had replenished Gerry, while the *chang* had given him back his strength and the nerve to continue. What he had suspected had been confirmed: that the man calling himself St Germain was a magical adept, an immortal, and now, with other adepts, protected the Tuaoi Stone where he and others resided higher up the mountain.
Yet what did they want with him? And what, indeed, was their ultimate purpose?
He sighed, seeing these as final questions, then climbed to his feet.
'I take it that I can't even sleep here?'
'No, you cannot. Once you have asked all you want to know, you must be

cast out again. Have you any more questions?'
'No.'
'Then farewell.'
'Where did you learn to speak English?'
'From my *tulpa*.'
'Do you have any final words for me?'
'Go in good faith.'
Gerry nodded and turned away, walked along the spartan hall, glanced back once at the old lama, then went out through the door. Passing the deserted tables in the main assembly hall, he again saw the dust on the plates and knew that no one ate there. These monks had gone beyond that. They had weaned themselves off food. They lived on liquids and hid in their chapel-cells, ignoring the outer world. His footsteps echoed around the main hall, desecrating its silence, then he stepped into the world they were ignoring and was slapped by the freezing cold.
He was shocked into alertness, forced to recall what he had just left, and tugged up the fur collar of his jacket and started walking immediately, cutting around the walls of the monastery courtyard and then up the steeply winding track.
The monastery fell away to his left, was replaced by a soaring cliff face, and to his right was what appeared to be a steep drop into a dizzying, snow-flecked darkness. The snow was thick on the track, but being blown by a rising wind, and knowing that it was going to get worse, he started losing his drunken glow. His face began stinging, his eyes wept, his lips were cracking, and he saw the snowcapped peaks as jagged edges cutting into the brilliant stars.
Exhaustion came soon enough, followed by aches and stabbing pains, then the stinging of his skin turned to a numbness that made him feel paralysed. He started gasping for breath, sometimes slid and fell down, once nearly rolled over the edge and flipped away in sheer terror. He stood up and stumbled on, aware of that dizzying drop to his right, and was relieved when the track cut into the mountain, under snow-laden outcroppings.
Not far on, it branched again and he turned left without doubt, imagining that it would at least lead him deeper into the mountain, away from its unprotected outer face. He looked up and saw the peaks, gleaming whitely, eerily beautiful and seeming to tilt towards him, as if about to fall on him. He

thought of Ingrid up there – somewhere up there: his beloved – and that thought kept him going for a while, until things started changing.
Now the mountains were all around him, soaring above, falling below, the white slopes plunging into pools of darkness that he didn't dare look at. Instead, he stared up at the stars, tried to place them, couldn't do so; watched the moon in its translucent flight through an alien sky. That moon was too big to be true, too wafer-thin to be real, and when he glanced down he saw it reflected in the featureless inky depths, perhaps in a lake.
He shivered and looked ahead, disorientated, losing his senses, but thought he saw other lights, not the stars, winking on and off fitfully.
Lights? *What* lights? He rubbed his eyes and looked again. He saw the lights all around him, above him, in the distance, but thought that they might be the moonlight reflecting off ice.
The cold wind swept the snow across the steep, narrow track. He leaned into it, so far he was almost bent double, feeling the pain of frostbite on his face and hands, his eyes weeping helplessly. Now his misery was acute, his will going with his strength, and he thought of what this place was called – the zone of the dead – then dwelt on mortals transcending the physical state and knew the mountains were haunted.
The wind howled like a living creature. The snow swirled and attacked him. His footsteps made the sound of small animals scurrying. He sobbed aloud with terror, bit his lower lip, felt ashamed, surrendered to the terror again and tried desperately to conquer it. Then he remembered the old guide, Yaksa, and what he had told him: that he should let himself dissolve into the night and become *part* of the mountain. He tried to do that, giving himself to the wind and snow, but this time it was too much, his misery was too great, and he fell to his hands and knees and started moving up the slope like a mule – undignified, shameless.
'Dissolve!' he sobbed. '*Damn you*!'
How long had he been going? An hour or all night? He looked in vain for a sign of the dawn, but saw only the moon and stars. Those and the lights – *yes, damn it, they were lights*! – and he stopped, breathing deeply on hands and knees, trying to focus his eyes. They were not reflected stars, but individual living things, and they were bobbing up and down, occasionally gliding left to right, and seemed to be closing in upon him, as if to surround him.
He couldn't believe his own senses, so sobbed and started forward again, still

on his hands and knees, moving up an almost vertical slope while the snow slid around him. The lights were closing in on him, growing larger, ever brighter, and soon they had formed a large, pulsating orb that was coming towards him. Then his terror fused with his misery, ordaining his collapse, and he fell face down into the snow, taking deep, anguished breaths.
He let himself dissolve, becoming part of the mountain, and rolled over with his body wrapped in snow to gaze up at the stars.
The stars had disappeared. He was dazzled by brilliant light. The light turned into an immense, pulsating disc that grew wider and brighter. He felt its ethereal heat. The snow was melting off him. He squinted into the light as it fell about him and seemed to ingest him.
He was filled with wondrous awe. Though dazzled, he could still see. What he saw, as he warmed up and started dissolving, was a shadow-filled bright haze. The shadows seemed to be watching him. They were *there*, but out of reach. He reached out to where he thought they were, but he couldn't quite touch them.
At that moment, he lost his senses. He was completely disorientated. He didn't know left from right, the vertical from the horizontal, and felt that he was floating in space and somehow leaving his body.
He knew, then, that it was true – that he was actually dissolving – and remembered in a sudden rush of infantile terror, as the brilliant light blinked out and he was plunged into blackness, that given the relationship between light and the human eye, an invisible man would have to be blind.
In his blindness, in that terrible womb, his terror rendered him senseless.

Chapter Seven

As he drove the hired car from Darjeeling to Gangtok, Hans kept thinking of what he had done. Elena was sitting beside him, wearing a sky-blue jacket with figure-hugging denims and sweater, and each time she pressed her knee against his, his heart lurched with fear as well as lust.

He was concerned that Zweig, sitting in the back, might eventually notice.

Hans had always known he would live to regret his surrender to the drunken Elena that time; and indeed, since then, she had importuned him repeatedly,

and he, though terrified that Zweig would find out, had not been able to resist her practised whore's charms. He thought about her night and day, was hardly able to keep his hands off her, but with his lust went a dread of discovery – a dread based on his knowledge of what Zweig would do to him if he found out.

To make matter worse, Elena knew this and played on it, exacting a perversely heightened pleasure from touching and stroking him behind Zweig's back, though very much in his presence. More dangerously, she had also started *openly* displaying her contempt for Zweig – and Zweig was gradually recognizing it.

'Zweig can't get it up any more,' Elena had confided to Hans more than once, usually when they were together in bed, both naked and sweating after sex, 'and he's becoming real stingy, real tight with his *geld*. I want to get away from the fat bastard, and I know you do, too.'

While this was true enough, Hans was frightened that she could see it, since if she had seen it, Zweig might also have seen it and would not let it pass.

Indeed, ever since that dreadful day in Romania, when, after being seduced by Elena, he had been sexually humiliated by Zweig, Hans had sensed that Zweig was watching him more closely and turning much colder. Hans was growing more frightened of Zweig – even more so than he had been – and was not being helped by the fact that he and Elena were now secret lovers and she was being increasingly obvious about this when in Zweig's presence.

Sooner or later, she would let it slip out – and then he, Hans, would be a doomed man, with no hope of reprieve.
So, as he drove and felt Elena's knee touching his, he twitched and glanced fearfully in the rear-view mirror, expecting to see Zweig's cold eyes growing wide with rage. Luckily, Zweig continued staring out the window, at the Indian coolies in the lush fields bathed in morning's pearly light, obviously immersed in his unhappy thoughts about what he had done.
Apart from his fears over Elena's loose tongue, Hans wanted to get away because he sensed that Zweig was losing control. What had happened

between them in the Eforie Nord thermal treatment centre had been the first indication that Zweig was not his normal self; and many incidents since then, mostly outbursts of mindless rage, had convinced Hans that his boss was going insane.

Any doubts that he had about this issue had been put to rest when Zweig murdered Andropov Kuragin, thus guaranteeing the deadly enmity of the Soviets and the loss of his only remaining ally. Zweig certainly knew this; would have faced it when his rage subsided, and it was doubtless why he had, since leaving the South Atlantic to come here, alternated between periods of moody silence and inexplicable, frightening rages.

'He's going crazy,' Elena had said more than once. 'We should get out while we can, Hans.'

There could be no arguing with that, but it didn't soothe his fears.

Remarkably, no more than an hour after having received a telex from Zweig's office in Calcutta, informing him that Ingrid and the American had taken a train to Darjeeling, Hans had been surprised to find in his mail a note giving him the same information. The note had been signed 'Saint-Germain' in an elegant, rather archaic hand, and Zweig, when he read it, had growled, 'I think this note is genuine. He *wants* a confrontation with me. Now why would that be?' And two days later, when Hans had arranged everything, they had flown out from Paris.

The journey to here had been awful. Zweig had picked fights with people at every stop along the route – at the airports, in the hotels, with taxi drivers – and Hans had heard him, through the wall dividing their rooms, screaming abuse at Elena. For this reason alone, Hans was pleased to be out in the open again, away from the claustrophobic confines of the hotel with Zweig throwing tantrums, and instead driving through the increasingly tropical greenery of Sikkim toward the vast, snow-capped mountains.

They had been greeted at the station in Darjeeling by another of Zweig's informants, a local government official, who told them that Ingrid and the American had been staying in the Oberoi Mount Everest hotel, that their room had been bugged, and that by this means it had been ascertained that they'd had a meeting in the hotel lobby with someone calling himself Mephisto, originally Christian Grabbe, after which Ingrid had sneaked out of her room, not to return, and the American, leaving the same room to pursue her, had returned all alone.

Also, according to the findings of a perfectly routine check with all of the government official's rail, air and carhire contacts in Darjeeling, the American had hired a taxi the following morning to take him to a car-hire company that was located on the approach road to Gangtok, from where, according to the English owner of the company, he had intended taking a hired Land Rover through the Sikkim valley, prior to attempting to persuade some Sherpa guides into taking him up the Kanchenjunga mountain.
What the corrupt government official had *not* been able to ascertain, and what still puzzled Hans and Zweig, was the whereabouts of Ingrid, since the American had made all his arrangements alone and had certainly gone to Gangtok on his own. They had therefore assumed that the American's insane hope of scaling the mountain, at which he was singularly inexperienced, was an indication that Ingrid, somehow or other, had ended up there, doubtless in the clutches of Saint-Germain.
'We must be close,' Zweig said from the back seat of the car. 'Where *is* the damned place?'
'The town's just a couple of miles from here,' Hans replied, 'so the car-hire firm *should* be fairly close.'
The road here was winding through upland forests and meadows, with spruce, pine, oak and magnolia trees rising out of a bright profusion of yellow, pink and crimson rhododendrons and broad swathes of blue irises, with the peaks of Kanchenjunga scraping a cloudy, grey-blue sky.
Hans shivered when he saw the mountain, feeling as if it was calling to him, and was relieved when they approached the outskirts of the small town of Gangtok and he saw a building by the side of the road, surrounded by trucks, vans, cars, and a single, extremely battered helicopter.
'Here it is,' he said as he pulled into a parking space directly in front of the building, which looked like a small wood-plank house with a raised verandah running along it.
Turning off the ignition and applying the hand-brake, he slipped from the car and hurried to open the rear door and let Zweig get out. Zweig did not look too happy as he studied the helicopter, seemed even less happy when Elena wriggled out of the other side, languidly stretched herself, spat her chewing gum on the ground and said, 'Shit, what a dump!'
'Stop talking like a tramp,' Zweig curtly admonished her.
'I should've stayed back in Darjeeling,' Elena said defiantly, then, foolishly,

smiled at Hans. ‘I mean, what am *I* doing here?’
‘You’re here because I can’t trust you in that hotel,’ Zweig informed her. ‘Now please shut your mouth and don’t bother me. Let’s go inside.’
Shocked that Elena could be so stupid as to smile at *him*, while openly defying Zweig, Hans was glad to go up the steps, onto the verandah of the shabby roadside house. Glancing sideways at Zweig, he saw that his fleshy face was grim, his eyes smouldering beneath the wrinkled brow and bald head. Zweig looked like a monster, not quite human, certainly dangerous, and Hans felt his stomach heaving nervously as he knocked on the door.
‘Come in!’ a cheerful, English-accented voice cried out instantly. ‘We’re always open for business!’
When they entered, they found themselves in a very untidy office, with two badly cluttered desks, a couple of metal filing cabinets, a few typewriters and a single telephone. The walls were covered in maps, charts, timetables, and pin-up calendars from various tyre manufacturers; a lot of agricultural and mechanical tools were scattered about the place. A long counter divided the office from a reception area, and behind it stood a short, plump, ruddy-cheeked Englishman, whose eyes, bright blue and crinkled with lines of humour, matched his naturally cheerful grin.
‘The first customers I’ve had all day,’ he said. ‘How do you do?’
‘We’re fine,’ Hans said. ‘Are you David Stewart?’
‘I certainly hope so. I’m the only English resident in the area, but I sometimes forget that fact.’
‘My name is Hans Mayer. Me and my friends are travelling about the area and we’d like – ’
‘You’re German, yes?’
‘Yes,’ Hans agreed, ‘we are.’
‘Damned good soldiers, I have to admit. Let bygones be bygones.’
‘Yes,’ Hans said. ‘Of course. What we want is – ’
‘I have Land Rovers and trucks and vans and ordinary cars. I have the only helicopter in the area – so just say the word.’
‘That is *most* kind,’ Hans said, feeling flustered by what was clearly a touch of English eccentricity. ‘What we want is – ’
‘I would suggest, if you intend travelling farther, to the lower slopes of the mountains, that you use a Land Rover. Of course, if you’d like to *fly* over the mountains, I could be your pilot.’

‘We were thinking of – ’
‘Ah, yes, a flight *along* the mountains. The lady *would* find that heavenly. And I don’t doubt that – ’
‘We’re looking for someone,’ Zweig interjected rudely, stepping up to the counter, spreading his large hands upon it, and staring down without warmth at the smiling Englishman. ‘An American named Remick – Gerry Remick. We were told he wanted to hire a Land Rover and would have to get it from you. Has the bastard been here?’
The cheerful expression left the Englishman’s face and he looked up at Zweig with detestation. ‘I *beg* your pardon?’ he said.
‘You heard me,’ Zweig growled. ‘An American bastard. His name’s Gerry Remick.’
‘This is not the police department,’ the Englishman responded. ‘I am here to hire an assortment of vehicles or give flights in my helicopter. I’m not here to listen to such language or disclose the names of my clients.’
‘Actually,’ Hans began, hoping to pour oil on troubled waters, ‘we just wanted…’ But he trailed off in despair when Zweig went to the end of the counter, entered the office area, grabbed the small Englishman by the collar of his jacket and raised him bodily off the floor. The Englishman hung there, eyes bulging, cheeks bright red, kicking his feet helplessly in the air while the huge Zweig glared at him.
‘I detest English fairies,’ Zweig said. ‘Now has he been here or not?’
The Englishman was choking on the tightened collar of his jacket, opening and closing his mouth like a fish out of water. Zweig shook him like a rag doll, making his flushed cheeks turn pale, then hurled him bodily at the nearest wall. The shocked Englishman slid down the wall to become a shuddering heap on the floor.
Zweig picked up an axe, glared down at the Englishman, then started swinging the axe with a frightening efficiency, bringing it down on the typewriters, the desks, the telephone, then smashing all the chairs to smithereens before attacking the walls. He went at them with cold fury, muttering under his breath, hacking great lumps out of the planks, smashing lamps and pipes, tearing electric cables out of the plaster covering the planks, hacking the whole office to pieces while its owner, still huddled on the floor, looked up in horror and dread, his eyes like two polished spoons.
Eventually, Zweig finished, let the axe fall to his side, took a deep breath,

then swung the axe back over his head and brought it down on the Englishman.
The Englishman screamed and rolled away just in time, the blade of the axe burying itself low down in the wall where his head would have been. Then Zweig reached down, grabbed him by his jacket, and jerked him back up to his feet.
'The *Schwein's* name is Remick,' Zweig said. 'Now did he come here or not?'
The dazed Englishman simply nodded his head, indicating, 'Yes.'
Zweig opened his large hands and dropped the Englishman to the floor, where he flopped forward, gasping for breath, then rolled onto his back.
'Yes,' he gasped, 'he was here. He took a Land Rover. He wanted to drive through the Sikkim valley to the lower slopes of Kanchenjunga. Once there, he was hoping to hire some Sherpa guides to take him higher. I thought he was mad and told him so, but he insisted on going. He kept mumbling something about some girl. I didn't catch what it was.'
'What *part* of the mountain?' Zweig asked.
'I don't know.'
'You're sure?'
'*I don't know*!'
The Englishman propped himself against the wall, his legs stretched out before him.
'Is that helicopter outside ready to fly?'
'Yes, I can take you – '
'I can fly it myself. *Danke sehr* for your helpful information. Hans, kill this English *Schwein*.'
Hans felt a deep surge of horror and disbelief as Zweig turned away and went back through the opening in the counter. He opened his mouth to speak, was lost for words, saw Zweig's steely gaze fixed upon him and turned away to face Elena, who, for the first time since he had known her, also seemed shocked.
'Jesus Christ, Zweig,' she said, 'you can't really mean…'
'Shut up. It's none of your business. Hans, do as you're told.'
'Herr Zweig, I really don't see any reason for – '
'God damn it, Zweig,' Elena interjected, 'don't be such an ass. You're acting like someone going crazy. Show some sense, for Chrissakes!'

Zweig snapped his fingers at Hans. ‘A weapon! *Give me the pistol, Hans*!’
Hans did as he was told, removing the pistol from its holster under his jacket. As he handed it to Zweig, he could hardly think straight, was only aware of a deepening horror and bewilderment, not sure what new diabolical ploy his master was cooking up.
He soon found out. Zweig held the pistol in front of his face, studied it thoughtfully, then turned around and held it out to Elena, who stepped back, shaking her head in protest.
‘No!’ she spat. ‘*No*!’
‘You whore!’ Zweig growled. ‘Telling *me* what to do! You’re becoming too smart for your own good; it’s time you learnt to take orders.’
‘I won’t do it! *I won’t*!’
Though ashamed of himself, Hans was too frightened to move, and didn’t do so even when Zweig reached out for the protesting Elena, grabbed her by the throat, and waved the pistol threateningly in front of her face.
‘Take the pistol and kill that English *Schwein*. It’s him or you, Elena. Now take the pistol and shoot him!’
White as a sheet, Elena took the pistol from Zweig, glanced despairingly at Hans, looking more human than she’d ever been before, then walked, breathing too harshly, through the gap in the counter.
Hans stared pleadingly at Zweig, met that coldly ferocious gaze, turned away to see the shaking Elena slowly raising the pistol. She was no longer a whore, but a woman stripped naked, trembling with fear and revulsion, trying to choke back her shame. At that moment, he almost loved her, understanding what she was feeling, and realized that she and he were bound together in the same vicious trap.
He had to get them both out of it.
The Englishman whimpered, ‘No!’ and then Elena started crying, the hand holding the pistol shaking visibly as she tried to take aim. ‘*Please*, Miss!’ the Englishman pleaded, his voice hoarse, but Elena’s wrist jerked, the report ricocheted around the room, the Englishman’s heels kicked the floor and he quivered once or twice as Elena stepped back and covered her mouth with her free hand, her streaming eyes turning towards Zweig to display her revulsion.
‘Oh, you *bastard*!’ she sobbed.
Without a word, Zweig stepped around the counter, walked up to her and slapped her face. It was a sharp, brutal slap, making her head jerk to the side,

and she dropped the smoking pistol to the floor.
‘You’re mine,’ Zweig said. ‘You do as I say. Now let’s get out of here. Hans, pick up that pistol.’
He practically dragged Elena from the office, pushed her through the front doorway, then indicated with a nod back over his shoulder that Hans should follow them out. Hans rushed into the office area, snatched up the pistol, applied the safety catch, then slipped the weapon back into his holster. He looked down at the dead man, saw pieces of brain and blood, an anguished contortion of outflung limbs, and almost heaved up. However, he managed to control himself, looking away and breathing deeply, then hurried out of that place of death and back into the fresh air.
Zweig was standing by the helicopter, holding on to the sobbing Elena, both of them framed by the snowcapped mountains and a cloudily pock-marked sky. Zweig was holding Elena tightly, his large hand clamped on her shoulder, as she shook like a leaf in the wind, suddenly frail, almost childlike. The sight of her tears shocked Hans, but also filled him with fear. He and Elena were in the hands of a madman. Zweig had given up everything, was losing his mind, collapsing, and his dream of obtaining the Tuaoi Stone was all he had left.
That stone possibly did not exist – and if it did, so what? Zweig was in no condition to deal with it or anything else. No, he was going insane, inviting self-destruction with every step he took, and sooner or later that need to destroy would be turned on Hans, also.
‘No,’ Hans whispered, ‘it’s too much.’
He had been a slave for too long and now he wanted his freedom, the touch of human warmth, Elena’s flesh, that ecstatic renewal. He wanted her and a decent future, a bright place, without fear, and as he walked towards her and Zweig, putting a smile on his face, he realized that at last he was willing to risk all for that.
‘I’ll fly it,’ Zweig said, then stepped aside, his eyes watchful, to ensure that Hans and Elena climbed up before him. He followed them in, huffing and puffing badly, then took the pilot’s seat and switched on the ignition, then expertly took them up above the clouds to the vast, sweeping sky – a clean place, well lit, an empty space where birds could spread their wings and had nothing to fear.
He flew towards Kanchenjunga.

Chapter Eight

Something changed the silent darkness. A hint of light, distant sound. A faint murmuring, like water on sand, reflecting moonlight and stars. No, something else… not reflected sky, just lights… streaks of light that undulated through the darkness and hinted of substance. No splashing water either: encircling voices, closing in. A heartbeat that resounded like a gong and filled up what he was.

I am , he thought as sensation returned to him. *Gerry… I am Gerry*. His pulsing blood warmed his skin. *Where am I*? *What's happening*? He remembered going blind. A spasm of terror whipped him, then retreated when the streaks of light widened.

The resounding heartbeat was his own, but it faded away as sound returned: the shuffling of feet, murmuring voices, the words now more distinct… 'He's coming around… doing fine…'

The streaks of light had joined together to become a general brightness; it spread through the darkness, letting him know that he had sight, so he finally opened his eyes, looked up from where he was lying, and saw two faces looking down, both familiar to him.

One was diabolically handsome, the other silveryhaired and distinguished, and they both smiled and then moved away, leaving his view unobstructed. He felt his own body, pinched himself, realized that he was whole, then looked up at a very strange, high ceiling, wondering what he was seeing.

'You're alright,' a familiar voice said smoothly. 'You can sit up now, Gerry.' He realized that he was stretched out on some kind of hard bed, and turned his face in the direction of the man who had spoken. St Germain and Mephisto were standing a short distance away, side by side, both wearing white Tibetan robes, or *chubas*, in a great hall remarkably similar to the monastery he had left the night before: high walls of stone and *chan*, a spartan stone-flagged floor, Tibetan carpets and odd bits of Indian furniture

placed here and there.
There were, however, a couple of differences… and coming awake, now surprisingly free of fear, he took a deep breath, sat upright, and gazed more carefully around him.
The stone-and*chan* walls did not rise to an ordinary ceiling, but appeared to have been carved from solid, irregular rock, which he assumed could only be the interior of the mountain. More bizarre was what appeared to be an immense, steel-plated dome that formed the high roof of the great chamber, rather like the inside of an observatory.
In the dead centre of the floor of the great hall, directly below the high dome, stood a five-foot-tall rectangular, solid steel pedestal, on top of which rested, inside a protective transparent case, a light-reflecting, crystal pyramid, about five inches high.
It had to be the Tuaoi Stone.
Without thinking, Gerry swung his legs off the bed, which was also made of stone – a solid block, as he noticed
– and walked the few yards to the middle of the great hall, stopping in front of the pedestal supporting the legendary Tuaoi Stone. He reached out to touch the transparent case, hesitated, stared at St Germain and Mephisto; when they simply smiled and nodded their permission, he touched the glass casing to confirm that it was *only* glass.
Yes, it felt like glass, or certainly something very similar, and he looked through it at the five-inch-high crystal pyramid, which, in reflecting the light, was unusually dazzling.
He stared at that miniature pyramid for a considerable period of time, then eventually raised his gaze from the tip of the pyramid to the steel-plated dome high above him.
The tip of the pyramid was aimed directly at the centre of the dome.
‘Can I touch it?’ he asked, again looking at the miniature pyramid.
‘No,’ St Germain said.
The sound of that distinctive voice, which he had first heard during his Nile cruise, jerked him gently back to reality and made him study the two men. Since he had recently seen Mephisto there was no great surprise there, though once more he was aware of a certain jaded weariness behind his diabolical attractiveness and slightly mocking, uncannily erotic smile. However, since that first encounter during the Nile cruise, he had only seen St Germain in

dreams or hallucinations, as an apparition, a shimmering ghost, mostly slightly erased and distorted in a pulsating white haze; but now he could see him clearly and was singularly impressed, forcibly struck by his distinguished features, his grey eyes and silvery hair, his air of quiet authority, perhaps arrogance, his indivisible sense of self.
'What happened to me?' Gerry asked. 'I thought I was going blind.'
'You were temporarily dematerialized,' St Germain replied, 'and teleported up to here inside that glowing plasmoid mass. You are now back to normal.'
'I thought it was some kind of flying saucer.'
'That's what most people think when they see them. What they're actually seeing is a pocket of the infinite, a movable point where the world we know temporarily ceases to exist and material objects, or individuals, as if caught in a black hole, can circumvent space and time, to reappear elsewhere.'
'I'm supposed to believe that?'
'Why not? You're keen on mathematics. You have a particular interest in quantum mechanics and at least *understand* its implications. Think of the electron that can appear out of nothing, out of nowhere, the non-existent, then travel a distance that is both finite and infinite, realize its mistake, that it is actually unreal, then turn around and travel back through time to its starting point, thus having never existed in the first place.'
'Right,' Gerry said, fascinated already. 'And it repeats this again and again, in one sense never actually existing, in another existing eternally in an ever-scattering time event.'
'Correct, Gerry. If you see me, I *am*; if you do not, *I* am not. The secret of immortality is to be found in quantum physics: with the Secret Knowledge, with supernatural power, we can transcend space and time, materializing and disappearing at will, existing even in death.'
'And that's how you and Mephisto get around?'
'Yes.'
'Like the lamas?'
'Yes, like the lamas… but in a much more advanced state. The lamas can only project *themselves* out of their bodies; we can do the same to others, whether they want it or not. Rather like creating a *tulpa*: a willed materialization of another person.'
'So Ingrid's up here somewhere? She's safe?'
'Of course,' St Germain said.

He nodded at Mephisto who turned away and walked off without a word, leaving the great hall by a doorless, arched exit in a side-wall. Then, while St Germain stared steadily at him, smiling slightly, Gerry was able to see something that he had not noticed previously: that this man, for all his outward appearance of youthfulness, was much older, a *lot* older, than he appeared to be at first glance. It was as if a youthful patina had been placed over the mouldering tissue of the centuries, a second skin on the verge of being shed, to reveal…

'What is this place?' Gerry asked.

'A sort of monastery,' St Germain replied. 'We can only leave our material bodies temporarily, and here, when in the material state, we meditate and ponder the Secret Knowledge, which, by its revelations, sets us free from mortality's strictures.'

'Has this place been hollowed out of the mountain?'

'Yes. Many centuries ago. It was created by normal, mortal men, before they transcended. From outside it cannot be seen unless that is our wish. Nor would you have found it had you wandered these mountains for days. No one has *ever* found this place, unless we wished them to do so.'

Gerry was willing to believe that, remembering his tortuous journey, his increasing conviction that the mountain was playing tricks on him and confusing his senses. He wondered if that path he had taken really existed, or if they had placed it there for him, but instead of asking about it, was moved by another, more personal concern.

'Has Mephisto gone for Ingrid?'

'Yes. He is bringing her to you. We brought her here to make you come after her – and you did, as we believed you would. Without the strength of your love for Ingrid, you would not have made it as far as even the first monastery. You are one of the pure at heart.'

'I seriously doubt that.'

'The pure at heart are possessed of the kind of humility that even they may not recognize in themselves. We are rarely, if ever, what we believe ourselves to be – and you are more than you know.'

Gazing around the great hall, which had precious little furnishing and made voices reverberate, Gerry felt far removed from what he had been, different, much older and wiser, as if changed overnight. He felt no fear at being here, but only a burning curiosity, a rising excitement that filled his head with light

and heightened perception.
There was so much he wanted to ask, but he didn't know where to begin, and was still gazing around him, in a trance of expectation, when the sound of footsteps approaching outside the great hall made him look at the arched doorway to his left.
Ingrid entered with Mephisto, the latter holding her elbow, and she smiled with surprising naturalness and joy, putting her hands out even as she hurried to him, to embrace him and kiss him. He felt her softness and warmth, her femininity, and took it into himself, almost weeping at the emotion she gave him. When she stepped back, flicking hair from her eyes, her smile shone like the sun.
'They told me you'd come after me,' she said. 'And I knew you would, too.'
'You're okay?' he asked.
'Yes, I'm fine. A little bit dazed, but well looked after. I can't believe this is happening.'
He shared her feelings, but realized with a touch of amusement that it was something they had both expressed often during their complex journey to this place.
I can't believe this is happening.
No, he couldn't believe it, yet he still felt no fear, was moved only by a mounting impatience to find out what the ending was going to be.
Mephisto, who had been staring steadily at him, offered that slightly mocking, erotic smile, making him blush with embarrassment and self-defensive anger, speaking quickly to hide it.
'Why did you lure me up here?' he asked of St Germain. 'And why, if you're protecting the Tuaoi Stone, did you actually help us to find it?'
'You are here,' St Germain said gravely, 'to meet your manifest destiny.'
Startled, slightly shocked, and embarrassed this time in an odd, almost childish way, Gerry stared at Ingrid, received a full smile of encouragement, glanced at the thinly smiling Mephisto, then turned back to St Germain.
'You now know the secret of civilization,' St Germain said. 'That civilization began here, when what is now Africa and India were one landmass. That original civilization eventually became more advanced in its intellectual and scientific achievements than the most advanced societies of the present day. It was a civilization based on kabbalistic geometry, or numerology; and having discovered that everything in existence is bound together in a complex

design, and that the design is essentially numerical, the philosopher-leaders of that society soon uncovered many of the great mysteries of the universe and created a civilization in which mental telepathy, extrasensory perception, precognition, the pineal eye, levitation and other so-called paranormal powers were commonplace, at least amongst the philosopher-leaders, or high priests.' He paused to glance around him, as if seeing faraway places, then stared at the Tuaoi Stone.

'Knowing that every number has certain given properties – male and female, active and passive, positive and negative – the high priests of that civilization based all of their creations on the dictates of given numbers, with the names of things or persons encoding their essential characteristics in the numerical values of the letters used. In other words, each letter in the alphabet had a corresponding number, and all words in the spoken language were created from the numbers containing their characteristics. In time, the language of words became the dominant language, while the *original* language – the language of numbers – became the secret, magical language of only the most powerful, magical adepts at the head of that great civilization.'

St Germain approached the glass casing containing the Tuaoi Stone, placed his hand upon it, above the miniature pyramid, and lovingly left it there.

'In the secret language of numbers, the perfect number is six, with all other numbers grouped around it; and the most perfect shape, according to the numerical law, is the shape of the pyramid. Thus, the dominant architectural shape of that great civilization became the pyramid, which, in its numerous variations, such as the Tibetan chorten or the oriental pagoda, spread across the world in the wake of the migrations of the people of that civilization about 200,000 years ago, in a time when there were no written records and all was held in the mind.'

'And were you,' Gerry asked, 'in one of your previous incarnations, a high priest, or magical adept, of that civilization?'

'Yes,' St Germain said, not looking at him, but simply staring at the crystal pyramid in its glass case and continuing to speak as if addressing it. 'The language of numbers is based on the first eight digits, one to eight, the most important of which is six, with the most magical of all combinations being the so-called Number of the Beast, 666, which has often been disguised as the sum of its three digits, eighteen, or 1746, the digits of which, when added together, also make eighteen. The Tuaoi Stone is therefore a perfect pyramid

whose dimensions are based on that magical number – and thus embody in alchemical terms what the number represents: the fusion of Earth and sky, male and female, sulphur and mercury – the very secret of life. Thus, the Tuaoi Stone, when placed on top of the Great Pyramid, created a fusion between Earth and the cosmos, between the terrestrial and the celestial, creating a bridge between space and time, rendering human mortality obsolete. Through the Tuaoi Stone, immortality and limitless power could be gained; and for that very reason only the high priests of that great civilization, the absolutely pure at heart, were taught the secret language of numbers, became magical adepts, and explored the mysteries of the universe in increasing secrecy, becoming the keepers of the sacred stone throughout the centuries.'
'So the Tuaoi Stone is actually the Philosopher's Stone?'
'Yes, my young friend, it is.'

Chapter Nine

Glancing at Mephisto, whose eyes glittered mesmerically, Gerry recalled the bizarre journey that he and Ingrid had made to reach this point, the many clues and leads they had been given, all based on numbers. That complex journey had been a mathematical riddle and they had asked him to solve it. They had helped him the only way they could: with the language of numbers.

'And that civilization later spread out,' he said, remembering all he had learned, 'to the Atlantic Ocean, then the Mediterranean Sea, and finally to Egypt?'

'Yes,' St Germain said. 'And, of course, in the inept language of words, became known as Atlantis. Over the centuries of prehistory, while that civilization was still advancing, it eventually found its way by sea to the Atlantic Ocean. It built other great pyramids and founded another civilization there, on the various islands between the Azores and the Sargasso Sea. Unfortunately, it then suffered three periods of destruction by fire and water; in other words, by volcanic eruption, earthquakes and subsequent floods. However, after the first two catastrophes, and knowing that another was imminent, the high priests, including myself, removed the sacred stone from

the top of its great pyramid and travelled by boat across the Atlantic to the Mediterranean, finally settling on the islands of the Aegean Sea, between Crete and Santorini. Not long after, about 10,000 BC, the civilization that we had left in the North Atlantic was destroyed in the third of its periods of destruction and buried beneath the sea. Some of its remains are still there to this day, beneath the waters of Bimini.'

When St Germain said that, Gerry recalled the photographs he had seen at various times of the circular walls and pyramidal structures recently discovered at Bimini, in the westernmost district of the Bahamas, due east of Miami, Florida. He also recalled the visions that he'd had of great pyramidal cities, with pyramids of all shapes and sizes stretching away to the horizon, of the same constructions being covered in tidal waves and the dust of the centuries. In his vivid imaginings he had seen magnificent civilizations flourish and die. Now he knew that what he had imagined were visions of a former actuality, given to him by St Germain.

He lowered his head and rubbed his eyes, trying to take all this in, then raised his gaze again to St Germain, trying to see the bones of his skull beneath his distinguished, oddly youthful features.

Perhaps he saw weariness.
'The magical powers of numbers,' St Germain continued, 'incorporated in the sacred crystal, or Tuaoi Stone, brought great prosperity and joy to the peoples of that growing civilization in the Aegean Sea, but this in turn led to increasing arrogance and base ambition. While the high priests protecting the Tuaoi Stone became more withdrawn and secretive, the less religiously inclined embarked on campaigns of conquest and soon overran North Africa, including Egypt. By that time, the high priests, who by now were gifted with mental telepathy and precognition, had prophesied that the island of Santorini would erupt and subsequently destroy that civilization in the Aegean Sea, which many people now called Atlantis. Therefore, they removed the Tuaoi Stone from the tip of its pyramid on an island in that area and placed it on the deliberately truncated peak of the immense pyramid that they had built in Giza, in Egypt, in approximately 2,170 BC. Since that pyramid was to be their great temple of learning and, being located at what was then the precise

centre of the terrestrial Earth, was also an instrument of fusion between Earth and the cosmos, it eventually became known as the Great Pyramid.'
Gerry glanced at Mephisto and saw him smiling at Ingrid. She blushed, as helpless as a child, but didn't lower her gaze. He felt nervous just seeing that.
'In about 1,500 BC,' St Germain continued, 'Santorini, as had been prophesied, erupted and destroyed that socalled Atlantis in the Aegean Sea. After that, the high priests of the new civilization in Egypt guarded even more zealously the Secret Knowledge found through the Tuaoi Stone, educated many new adepts, including Plato, Pythagoras and Jesus Christ, in the inner sanctums of the Great Pyramid, and used the Tuaoi Stone – whose magical numbers represented the sum of the two basic elements of alchemical transformation, namely sulphur and mercury – as an instrument of such transformation to a higher, purely spiritual plane. Then, when they had succeeded – and had, in so doing, created a small, select group of magically gifted adepts – they removed the Tuaoi Stone from the tip of the Great Pyramid, left the now useless pyramid to the encroaches of modern times, most lamentably tourism, and returned with the Tuaoi Stone to the Himalayas, their natural home. I am one of that original group, a magical adept – and you, too, have been chosen.'
Feeling a wave of disbelief washing over him at the sound of those last words, Gerry shook his head from side to side in rejection, tried to grin it away, and decided not to pursue that point too quickly or deeply. Instead, having glanced once more at Mephisto and Ingrid, and been rendered more nervous by Ingrid's helpless response to the former's seductive charms, he choked back his resentment and asked of St Germain: 'The adepts actually found the secret of immortality?'
'In time, yes.'
'You and Mephisto are both immortals?'
'Yes, that is so. We exist on Earth in a physical form, but can transform ourselves at will, leaving our physical form to move back and forth through space and time. We are here, but there, also, simultaneously. Like your protons in quantum mechanics.'
'And the famous Comte de Saint-Germain was actually you?'
'Yes, that was me in one of my many incarnations. I was compelled to intervene in the affairs of mankind and thus had to adopt physical form and be noticed. My true history, however, was deliberately rendered obscure and

contradictory to confuse those who would try to identify me as who and what I truly am. But I was, and am, he: the Comte de Saint-Germain – in actuality, St Germain of this secret Order devoted to the Tuaoi Stone.'
'So what's the purpose of this secret Order?'
'Individually, to seek out the Secret Knowledge, which is both finite and infinite, and thus learn some of the secrets of existence, which is ultimately unknowable; to find through the Secret Knowledge the Unknowable, the inner peace of Nirvana, the one true reality. Collectively, in mutually finding Nirvana, creating a new Kingdom on Earth, a magical state of being in which terms such as "life" and "death" will become interchangeable, physical journeys through space rendered unnecessary, contact with those in far-flung galaxies perfectly commonplace, and knowledge of the nature of space and time made freely available and, perhaps, even comprehensible.'
'That's a purely spiritual quest.'
'Yes, it is.'
'Then why do you sometimes intervene in the affairs of mankind?'
'We only do so when the secrecy of our Order is threatened – or when the affairs of mortal men are a threat to their future salvation. Plato and Merlin, for instance, in their different ways, kept alive in the minds of men the legend of our magical civilization, whilst ensuring that our society remained secret. It was the function of Pythagoras to instil in mankind the knowledge that reality, at its deepest level, is mathematical in nature and that philosophy can be used for spiritual purification. Jesus Christ, another adept, returned to Earth in human form in order to help mankind rise from barbarism and create a culture based on love instead of primitive superstitions and fear. You already know about my own numerous interventions, as the Comte de Saint-Germain, in the troubled politics of the eighteenth century. You may also be aware of the rumour that Adolf Hitler had a secret, so-called magical advisor who persuaded him, by referring to his reading of the stars, *not* to encircle the besieged British army on Dunkirk beach. That single decision cost Hitler the war – and *I* was the secret advisor who deliberately led him into making that decision, which for him was disastrous, but which saved the free world from brutal subjugation.'
'And what about Ingrid's father, Wilhelm Zweig?'
'We protected you from Zweig because your purpose had not been fulfilled and he was threatening the completion of your task. In protecting you, we

foiled his dream of capturing the Tuaoi Stone in the hope of using its powers for his own evil purposes.'

St Germain was certainly being very persuasive, but Gerry felt that something wasn't quite right, that certain fabrications, or, perhaps, omissions, were gilding the truth. He had doubts about what he was hearing, didn't quite know why, so decided, instead of giving voice to them, to let St Germain say what he wished.

'And me,' he said. '*I'm* one of the pure at heart? I still find that hard to believe.'

'Yes, you are one of the pure at heart. You may not recognize that yourself, but your actions have proved it. Your journey to this place has been an elaborate one, dangerous and frightening, but throughout it you have acted with exemplary courage and the goodness of true faith. You are one of the pure at heart. It embarrasses you, but it is so. You have a fine mind, but lack material ambitions. Your pursuit of knowledge is not tainted by base motives, and your journey to here, designed to test your courage, also tested your virtue. Though highly intelligent, you have managed to retain the innocence of a child – and that innocence blesses you.'

'There must be many like me.'

'Many are considered, but few are chosen. You were chosen when I met you on that boat on the Nile and recognized your potential as one of us. Everything that has occurred since then has been designed to either bring you here successfully or let you fall by the wayside. I knew you were one of the pure at heart, though obviously not knowing it, and your innocence, combined with your high intelligence, clearly confirmed this. Likewise, your interest in esoteric matters, both scientific and spiritual, was another factor in your favour. And your specific interest and faith in the magical properties of the Great Pyramid of Giza was yet another confirmation of my belief that you were destined to join us.'

'And Ingrid?'

'Ingrid, also, is one of the pure at heart, your mirrorimage and helpmate, so her involvement since your relationship during that Nile cruise was also encouraged by me. Zweig was after the Tuaoi Stone and therefore had to be stopped; but I also wanted him to be your adversary in the final, most crucial test – in the conflict between good and evil, of which you are part.'

'Then it hasn't yet ended?'

‘No. The final test has yet to be, but it *is* close at hand, and I am confident that all is as it should be, that you *will* remain here as one of the pure at heart, only leaving to inaugurate the new Kingdom on Earth.’
Aware that he was caught up in something of startling significance, possibly beyond his comprehension, Gerry couldn’t help but feel a slight amusement at his own continuing, very human, concerns. He felt this even more when he found himself looking again at Ingrid and Mephisto, fearful of a liaison between them; but when he smiled at her, she returned his smile warmly, and so, feeling much better, he turned back to St Germain.
‘You say I’ve been chosen,’ he said. ‘I’m to become an adept and help create a new Kingdom on Earth. When will this be?’
‘Since the Secret Knowledge has been hidden from the mass of normal men by the use of kabbalistic geometry,’ St Germain replied, ‘the heart of which is the number 666, the new Kingdom on Earth will be inaugurated when 666 mortal men have been rendered immortal by their experiences in this magical monastery. So far, 665 men have done so. You are the last.’
‘Which is why I’m here?’
‘Yes, Gerry. Precisely.’
Gerry glanced at Ingrid and was struck by how calm she was, the lack of fear or confusion in her eyes, the warmth of her steady gaze. His heart went out to her, like a bird on wings of love, and then he studied Mephisto, saw that sly, mocking smile, and wondered what truly lay behind it, if the joke was on him.
‘I find most of this unbelievable,’ he said. ‘I’m only human, after all, and don’t believe in immortality. Nor do I believe in the powers you’ve ascribed to the Tuaoi Stone. It’s just a miniature pyramid, a symbol, and its power lies right there.’
‘No,’ St Germain said. ‘You’re wrong. The stone is as I have described it. It can cause physical *and* spiritual transformations, some of which you have actually witnessed during your journey to this place. The Tuaoi Stone can fuse the Earth to the cosmos. It can obliterate space and time.’
‘I’m sorry, but I still don’t believe you. I’m just a mere mortal.’
St Germain sighed, glanced at Mephisto, then returned his attention to Gerry.
‘Intervention in the affairs of men is sometimes necessary,’ he said, ‘and now is just such an instance. We have protected you both from Zweig because he threatened you *and* us; now, before we take you farther, we must pit your

goodness against his evil and observe the results. This is your final test. It will strengthen you or destroy you. And if, as we hope, it ends with your victory, it will rid you of the last of your doubts and help you to accept us.'
'Where and when will this final test take place?'
'Here and now,' St Germain replied calmly. 'Wilhelm Zweig, who mistakenly believes that he has pursued us, has actually been *guided* to this place and is arriving right now. So prepare to defend yourself.'
Gerry heard the gasp of shock that broke from Ingrid's lips at the very mention of her father's imminent arrival, then he saw her turning deathly pale and covering her lips with her hands.
Almost hating St Germain for what he was doing, he was about to say something when he heard a bass humming sound coming from above. When he looked up, he saw the dome in the ceiling opening, its metal plates parting like the petals of a flower, showing triangular patches of sky, the morning light, drifting clouds, then more sky, more light, as the panels drew farther apart, eventually disappearing completely above the rocky outcroppings of the mountain, until only an immense, jagged hole remained up there, exposing the white-cloud sky, its centre directly above the glass case protecting the Tuaoi Stone.
As Gerry looked up at the weak morning light and drifting white clouds, entranced by the real world, feeling that the sky was spinning magically and drawing him up to it, Mephisto stepped forward and smiled at him. That smile, as usual, was both seductive and totally ambiguous.

Chapter Ten

Looking down on the gleaming snow-white peaks and valleys of Kanchenjunga, from the pilot's seat of the roaring, shuddering helicopter, Zweig felt that the mountain was drawing him towards it, luring him in. He had to look away frequently, feeling dizzy and disorientated, but then he was reminded of Hans and Elena, both of whom were sitting slightly behind him, both obviously chastened. That gave him some pleasure – the knowledge that he still had power over them – and feeling more lively, not as old as he had been, he took the helicopter higher, watched the slopes slipping past below him, and searched every gorge and ravine for a sign of a hideaway.

‘*Scheisse*!’ he snapped. ‘Nothing but rock and snow!

They could be anywhere! *Anywhere*!’
‘We won’t find them,’ Hans said from behind him.
‘They’ll be very well hidden. If no one has found them
before, even by accident, then we’re unlikely to do so.’ Zweig was shocked by what he was hearing. Hans
actually sounded rebellious. Zweig sensed a rising
antagonism in his young assistant and thought he
understood why.
‘Shut your mouth, Hans,’ he said. ‘You’re missing the
point. The point is that we thought we were *pursuing* SaintGermain, when in fact he’s practically *invited* us here. He
must *want* us to find him.’
‘Why?’ Hans responded, sounding agitated. ‘That’s
what *I* want to know.’
‘It’s a trap,’ Elena joined in. ‘There can’t be any other
reason. We should fly the hell out of here before we get
into trouble.’
If no longer impressed with Hans, Zweig was even less
so with Elena and felt like throwing her out of the
helicopter, lock, stock and barrel. He loathed her stupidity,
her crass behaviour and crude tongue, but mostly he
loathed her voluptuous, whorish beauty, which had
gradually become a slap in the face to his waning potency.
She reminded him of his age, the rapid decaying of mind
and body, and for that reason, as well as a few others, he
now wanted rid of her.
‘I didn’t ask for your opinion, Elena, so please don’t
say another word. Your voice grates on my eardrums.’ She didn’t respond and he didn’t expect her to; she had
been growing more impertinent lately, but he had managed
to crush her spirit; making her murder that squawking
English fairy had certainly done the trick. She had been frightened and horrified, shocked out of her wits, and just as with Hans, when he had been forced to shoot the hoodlum, so, too, the very fact that Elena had pressed the

trigger had broken her spirit. She would not forget it quickly, would dwell on possible repercussions, and would subsequently now treat him with the respect he so richly deserved.

Satisfied, he stared at the mountain peaks all around him, brown rock in pure snow, the snow melting and forming a necklace of streams that ran hither and thither, glittering brightly in the late morning sunlight, before disappearing into pools of shadow, deep ravines, winding gorges. It was desolate down there, fiercely beautiful and vast, and he felt that he was flying over an alien landscape, perhaps a different planet.

These days everything seemed unreal and he didn't like the feeling. It was caused by his age and failing health, by the crushing knowledge of his mortality, but also by the pursuit of his daughter, her American boyfriend, and SaintGermain. They were all somewhere down there, perhaps waiting for his arrival; and as he flew between the snowcapped peaks, through pools of shadow and streams of light, he burned with a murderous hatred that threatened his sanity.

He was frightened, yes, of things he couldn't see or grasp, felt haunted by the magical unknown represented by Saint-Germain. He was frightened, but also angry, wanting vengeance, then immortality; wanting to see his daughter, that bitch who had betrayed him, suffer as her mother had done when he fed her the poison. And with that, he wanted the Tuaoi Stone, the Secret Knowledge, immortality, the conquest of his teeming nightmares, the key to the world. '*Scheisse*!' he muttered again. 'Where *are* they? Why don't they show themselves?'

He decided to fly higher, toward the most majestic peaks, also known as the Petals of the Golden Lotus created by Vishnu, the first step in the creation of the universe. Somewhere up there, he remembered, Siva was supposed to sit in a state of eternal meditation, generating

the spiritual force that sustains the cosmos. That force existed, he now realized, not in Siva, but in the Tuaoi Stone, and was the only thing that could possibly stand between him and oblivion.

Looking down, he pondered that fact and what it meant to him. He had thrown everything away in a fit of mindless rage, in what might have been a moment of madness, and now he had nothing left to live for, except what was hidden in the mountain.

'We're too high,' Hans admonished him. 'The winds are treacherous up here. This helicopter isn't made for such an altitude or these weather conditions. Please, Herr Zweig, take us lower.'

Again reminded that Hans, though still frightened of him, was gradually growing more defiant, Zweig took the helicopter even higher and soared over more ice-capped peaks. He studied them carefully, every shadow, each gorge, saw nothing but that awesome desolation, a vast and immaculate white carpet covering nothing but rock. His anger grew the instant he thought of what *they* had done… that wimp, Hans, and that painted tart, Elena… sometime… somewhere.

Yes, it was obvious. Such things could not be hidden. The wimp and the whore had fornicated behind his back and wanted to do so again.

His heart raced at the thought of it; his cheeks burned and he trembled. He took the helicopter even higher, flew across the loftiest peaks, looked down at the glittering snow and irregular pools of shadow, a vast, surrealistic, ominous jigsaw of brown and white, and contemplated hurling them both to their deaths, one after the other.

'We're too high!' Hans repeated through gritted teeth, breathing into Zweig's neck. 'Damn it, Zweig, *we're too high*!'

Zweig couldn't help himself. It was just too much to bear. His heart raced and he felt his cheeks burning as the

blind rage coursed through him. The impertinent young pup! Him and that whore, Elena. He took the helicopter even higher, ascending too quickly, and gleaned some comfort from Elena's gasp of fear as they bucked through the fierce wind.

'Christ!' Hans exclaimed.

'Shut up!'

'We're going to crash!' Elena shouted. 'Christ, Zweig, you stubborn bastard, take her down! She won't *go* any higher!'

'Whore!' Zweig bawled, unable to contain himself.

'*Shut your trap, you fat whore*!' Briefly forgetting the controls, he twisted around in his seat, feeling as if he was in a furnace with all of him burning, his body, his brain, and screamed at her, 'Get out, you bitch! *Out*! Get out or I'll kill you!'

'Out? What the…?'

'You mean *jump*?' Hans enquired.

'That's right. What do *you* think? I want this worthless bitch to jump out. You hear me, Elena? *Get out*!'

Shocked out of her wits, she just stared at him, speechless, then turned pleadingly to Hans, foolishly reaching out for his hand.

That was too much for Zweig (he viewed himself from a distance now) and he twisted farther out of his seat to slap at her face. He missed, fell forward, hanging from his safety belt, as the helicopter tilted to the side and was pummelled by wind.

He heard Hans shouting something, his voice filled with fear, then Elena letting out a piercing scream that almost ruptured his eardrums. He yelled incoherently at her, tried to punch her in the face, saw her big eyes disappearing, the top of her head, then a swathe of gleaming white snow and outcroppings of rock.

Hans tried to get at the controls, but Zweig swiped him away, took a deep breath and managed to take the controls

again. The helicopter levelled out, stopped vibrating, settled down, then flew smoothly between sheer walls of snow and ice-encased rock, its shadow leaping up and down on the land below, like a bird seeking food.
‘Jesus,’ Elena whispered. ‘Did you see that? He nearly got us all killed, Hans!’
Zweig was just about to twist around and lunge at her again when Hans shouted, ‘Look!’
‘What?’
‘Oh, my God…’
When Hans’ voice trailed off into a stuttering disbelief, Zweig glanced out to where two soaring snow-capped peaks fell down to a shadow-filled gorge with level ground at its base. It was like a small valley, almost hidden from view, and the cliffs that rose up on all sides darkly shadowed the plateau.
‘*Wunderbar*!’ Zweig exclaimed without thinking.
‘That *has* to be them!’
He had just glimpsed what at first he had thought was a small hole in the snow; but now, as the helicopter flew towards the gorge, he saw that the hole was rapidly expanding – as if hot water had been poured onto the frozen snow, melting it – and that the irregular edges around the rim of the hole were glinting like metal. Even as he accepted that he was indeed seeing glinting metal, the separate pieces took shape as immense triangular plates which, like the petals of a flower, moved away from one another, opening up to the sky, to reveal an artificially illuminated space just below – a space expanding as the helicopter approached it across the glittering white plateau. Aware that only the most highly developed technology could have constructed such a dome, let alone transported the material required to the peaks of the highest mountains in the world, Zweig knew it could only have been done by the keepers of the Tuaoi Stone.
Which meant that Saint-Germain was down there. Filling up with a

dangerous mixture of excitement and dread, sensing that he had come to the beginning of the end, he throttled down and let the helicopter hover just above the parting sections of the dome.

Eventually the steel plates opened completely, sliding back into the rocks, enabling him to look down into some kind of very large chamber. He thought he saw movement down there, but couldn't be sure. Thick snow glittered around the rim of the open space, merging into a hazy greyness, and below it, defying sense and credibility, was an artificially illuminated cavern, or great hall, containing, as he now saw, several human-shaped figures.

Perhaps four human beings.

'We'll have to go down there,' he said. 'I'm going to land in that place.'

'It's a trap,' Elena said. 'If we descend through that opening, those steel plates are going to close over us and trap us down there. We'll all be prisoners, Wilhelm.' 'I don't care. I have to see the Tuaoi Stone. Nothing else matters now.'

'Not to you, maybe,' she replied like a petulant child, 'but it matters to us. *We* don't want to land there. We don't have a clue what's waiting for us, so let's turn back while we can.'

'No,' he said, too excited even to be angry with her. 'I've got to see the Tuaoi Stone for myself. *I have to get it somehow*!'

It was madness and he knew it, but he couldn't turn back now. As the helicopter descended, as the circular space expanded below him, he knew for certain that he had been guided to this place, that they *wanted* him to come here, and that until he learnt the reason why, he wouldn't be able to rest.

'Yes!' he whispered as the helicopter was buffeted by the wind that raced howling across the expanding space. 'Let it end here!'

Then he felt the barrel of a pistol tapping the back of his head.

'No,' Hans said. 'We're not going down there. If you want to go down there, go, but do it alone.'

Zweig couldn't believe it. He glanced back over his shoulder but couldn't see Hans – only Elena's big eyes moving frantically up and down, and beyond her, outside the roaring, shuddering helicopter, a section of steel plating, shining from between two layers of snow-covered rocks.

'Take that pistol away from my head, Hans. I'm going in there *right now*.'

There was a click as the safety catch on the pistol was released, then he felt the barrel again tapping the back of his head.

'Elena and I are getting out of here,' Hans said, his voice surprisingly calm. 'You're going down there alone. Elena, take hold of that joystick and try holding the helicopter steady. Zweig, get out of that seat and go to the door.'

'You're going to make me jump out?'

'Yes.'

'Without a parachute?'

'Yes. Like you threatened to make Elena jump.' Shocked almost speechless, unable to believe that he had miscalculated so badly and that his mistreatment of Hans, instead of paralysing him with fear, had made the dog turn on its master, Zweig wanted to scream with rage, knew that to do so would be pointless, so simply clenched his ham fists by his sides and took a deep breath.

'You're crazy,' he said, letting his breath out again. 'Elena can't fly this helicopter. We'll just crash if she tries.'

'*I* can fly it,' Hans said, again tapping the back of Zweig's head with the barrel of the pistol. 'You made me learn, remember? It was one of my many unpaid tasks.

Now get out of that chair.'
Scrambling awkwardly around the chair beside Zweig, Elena took hold of the joystick just as Zweig released it. He studied her briefly, saw her fear give way to triumph, and accepted that she also had turned against him in favour of Hans. He felt shocked and humiliated, disgusted by his own bad judgement, and realized that the abuse he had heaped upon them was now coming back at him.
Well, so be it. He would take his courage from that. He had always despised them both, as he did most human beings, and now he would let his contempt be the base of his strength. He had been suffering from old age, from the fear of his mortality, but his rage would be enough to sustain him through what was to come.
'Of course,' he said to Hans. 'As you wish. Anything to oblige.' And with a contemptuous chuckle, he slid out of the chair and went to the open door where Hans, no longer timid, indeed looking quite aggressive, was aiming the pistol at him, his hand surprisingly steady. 'So,' he said, 'I now have to jump out. I will fall to my death.'
'We're not murderers, like you, so you won't have to jump. Instead, you can use the rope-ladder. Let it down, Zweig. *Then* get out.'
'And what do you think you can do without me?' Zweig asked. 'You and this brainless bitch, here?' 'You thought you owned me, didn't you? And that's
why you trusted me. You thought I was too fearful to disobey you or use my initiative. Well, I didn't disobey you, but I *did* use my initiative – by transferring a good amount of your remaining money into my own Swiss bank account. I think I've earned it, Herr Zweig.'
'Yes, maybe you have.'
'I'm going to be rich. Elena and I will have it made. We'll live in luxury for the rest of our days – and at your expense. Now winch the ladder down, you fat pig, and get out of this chopper. When I take the controls, I'll descend

into that place low enough for the ladder to be used. You use it and then we ascend again and fly out of here.' 'If I ever – ' 'You won't, Zweig. You won't ever see us again. I doubt that you'll even get back down the mountain. Now do as you're told.'

Feeling disconnected from what he was hearing, oddly lacking in anger, wanting only to get down there and find the Tuaoi Stone, Zweig briefly studied Hans, saw new strength in his handsome blandness, and finally felt a sneaking admiration for him.

'Yes,' he said, 'you *are* a smart boy. I knew that when I hired you as an accountant. And was, as usual, absolutely correct in my judgement, which is what makes me a leader of men. *Sehr gut*, Hans. You have proved my point.' Satisfied that he had subtly put Hans back in his proper place, he threw the end of the rope-ladder out of the open doorway, then began winching it down as the helicopter, roaring and shuddering, swayed dangerously from side to side.

'I can't control this thing!' Elena cried out despairingly. 'I don't know what to do!'

Hans slithered backwards to her, keeping his pistol aimed at Zweig. Taking hold of the joystick with his free hand, he then gave the pistol to Elena.

'Keep him covered until he's out on the ladder,' he said. 'If he doesn't go down the ladder, shoot him.' 'My pleasure,' Elena said.

Zweig winched the rope-ladder down to its full extent, which was a long way down. He saw it flapping wildly in the slipstream of the rotor-blades that were also sweeping the snow in dense clouds across the circular space below, further obscuring his view of what, or who, might be down there. When he had finished, he locked the winch and turned back to Elena, who was smiling with what seemed like genuine pleasure, perhaps because she was aiming the pistol at him.

‘Have a good experience,’ she said. ‘It’s been a real pleasure knowing you.’
‘*Auf Wiedersehen*,’ he retorted, refusing to bow to her. ‘It’s been *my* pleasure, Elena.’
The helicopter shuddered and roared, whipping an icy wind around him as he swung his legs out through the open doorway and sat on the edge. He looked down at that circular space, at the visible edges of that enormous metallic flower; the snow was being whipped off the triangular metal plates and swept across the great hall below to form a whirlpool of whiteness that obscured the four figures he had previously seen. But he knew they were down there, waiting for him, protecting the Tuaoi Stone. He glanced once at Elena, at the pistol in her hand, smiled at her and then rolled onto his belly and inched out to place his feet on the rope-ladder.
‘Good riddance!’ Elena crowed.
He felt no fear at all. He simply went with the slipstream. He flew out above the rocks, above that circular space, was blinded by the swirling snow, and went down, inch by inch, rung by rung, as he was pummelled from side to side. The wind howled and screamed, a living thing, tearing at him, and he laughed, exultant, defying death, preparing for it, then looked up and saw Elena and Hans smiling victoriously as the latter sawed through the ropeladder with a glittering blade.
The short ropes snapped apart, were blown out on the slipstream, and he fell like a stone through sweeping snow and howling wind, falling a short distance, though it took an eternity, towards rapidly widening stone slabs. It was a brief, tumbling dream.

Chapter Eleven

To Ingrid, Zweig’s fall seemed very quick indeed: one second he was swaying dangerously on the end of a ropeladder, the next he was falling

rapidly with the ladder flapping dementedly above him, to land on his feet on the floor beside the encased Tuaoi Stone. His knees buckled and he collapsed, rolling over a few times, then came to a halt close to St Germain's feet as the helicopter, which had helpfully descended to just below the metal plates of the open dome, roared even louder and started ascending again, someone hanging out and waving a hand in what seemed like a mocking farewell.

Even as Zweig looked up, perhaps hurt, certainly dazed, the bass humming sound was heard again and the metal plates of the dome began moving in towards one another, preparing to close. Zweig stared at St Germain, then raised his gaze to the closing dome, not attempting to conceal his amazement at what he was seeing. The dome eventually closed, the triangular plates joining together, and then Zweig looked about him, clearly regaining his senses, then sighed and climbed awkwardly to his feet.

As her father stared around him in amazement, then fixed unnaturally bright eyes on the miniature crystal pyramid in its protective glass casing, Ingrid felt herself trembling with fear and revulsion, reminded on the instant of how this man, who should have nurtured her, had almost destroyed her. She then thought of her mother, of how Zweig had murdered her, and a wrenching grief and rage threatened to shatter her.

Unable to bear the sight of him, she had to look away, and mercifully found herself facing Gerry, who was smiling encouragingly. Feeling better, she forced her gaze back upon her father, who completely ignored her.

'Which one of you is Saint-Germain?' he asked.

'I am,' St Germain replied, his voice as calm as a limpid pool.
'And who are *you*?' Zweig asked, glancing at Mephisto, then flushing as that gentleman's unnatural, seductive charm fell relentlessly over him.
'My name is irrelevant,' Mephisto replied.
'You wouldn't by any chance be a certain Christian Grabbe, who kindly invited one of my men to the Waldorf Astoria hotel in New York, supposedly in order to sell him the Tuaoi Stone, but then, in some mystifying manner,

caused havoc and death?'
Mephisto smiled at that. 'A name is no more than a name,' he said, 'and I personally have more than one.'
'And did we have an unusual encounter in the Herestrau Park in Bucharest?'
'I believe so, Herr Zweig.'
'That encounter had an unusual effect upon me.' 'That was the intention, Herr Zweig.'
Clearly rendered uncomfortable by Mephisto's mesmeric gaze, Zweig looked greedily at the miniature crystal pyramid in its transparent casing.
'That's the Tuaoi Stone?' he asked as if making a statement.
'Yes,' St Germain said. 'That's what you've been searching for.'
Approaching the pedestal, Zweig placed his hand on the transparent casing, which he had assumed to be glass, then gasped and jerked his hand away as if his fingers had been scorched.
'*Scheisse*!' he gasped. 'What happened?'
'You can only touch the casing if I give you permission,' St Germain said sombrely. 'And naturally it can only be opened by the command of the sacred stone's present keeper, this being myself.'
As if unable to accept what had already happened to him, Zweig once more placed his outstretched fingers on the transparent casing – and again had to jerk his hand away. Flexing his stinging fingers and blowing upon them, he shook his head from side to side, indicating his perplexity, and grinned dangerously, as if at a private joke.
'Most effective,' he said, glancing around the great hall, his smile freezing into a look of controlled rage when he finally saw Gerry. 'Ah, so! My young American friend! With my daughter, of course. How pleasant that we're all together again. We can have a brief reunion party.'
'The only party I'd like to attend with you,' Gerry retorted, 'is a lynching party, with you in the noose.'
'What an admirable American redneck you are. You should be on *my* side.'
And with that, Zweig turned to Ingrid for the first time. 'You stole my money and ran away, you ungrateful bitch. I cannot forgive you for that and you'll be punished in due course.'
'I won't ever let you punish me again. I'm no longer afraid of you.'
'Really? You're not afraid? Well, we'll see about that. The game isn't over yet, *meine Fräulein*, and you're first on my hit list.'

‘You’re in no position to make threats,’ Gerry said. ‘And you don’t have your gangs of hoodlums with you. Here you’re just one guy, Zweig.’
‘I also have a score to settle with *you*,’ Zweig responded. ‘So don’t imagine I’ve come here to shake your hand and give you a medal. You’re in very hot water, my young friend, and I *don’t* need my men here.’
‘Just what the hell do you think you can do here?’
‘I don’t *think*. I *act*.’
When he turned away from Gerry, his grin contemptuous, Ingrid was reminded that as long as she could remember he had either humiliated her (which was, at least, a form of recognition) or brutally ignored her. His lack of feeling for her seemed singularly unnatural. His urge to destroy her morally, as he had destroyed her mother physically, was something she couldn’t comprehend, no matter how hard she tried. Yet she also felt guilty because of her lack of feeling for him, and wondered again that her instinctive need for a father-figure hadn’t managed to quell the fear and revulsion she felt in his presence. She felt no love for him at all, and, indeed, only wanted to be rid of him, and that, in itself, was enough to make her feel even more guilty.
She didn’t want to accept that she had no love for this brutish man; that she simply wanted him out of her life, once and for all.
Ignoring her again, Zweig stared at the glittering Tuaoi Stone with an insatiable, unholy lust and said, ‘I’ve been obsessed with this for years, wondering if it really existed, and in the end I simply had to have it, whatever the cost. You practically invited me here, Saint-Germain, so what *is* the cost?’
St Germain’s smile was like ice and fired combined, his grey gaze radiating the light of a distant, alien sun.
‘For you,’ he said, ‘there *is* no cost. By which I mean you cannot buy it. The Tuaoi Stone is not for sale, not for barter, not for hire; it is not for those who wish to advance themselves in any material way. It is true, as you have heard, that the stone has great supernatural powers, but those powers cannot be called upon, except for the good. To you, the Tuaoi Stone would be worthless, no more than an artifact, only worth the cost of its crystal or its rarity value in the marketplace. Only the pure at heart can make use of the sacred stone; only those who have studied the Secret Knowledge and know how to use it for good. The Secret Knowledge is founded on numbers – the

lost language of ancient man – and unless you can speak in that tongue, you cannot make use of Tuaoi Stone. Your journey to this place has therefore been fruitless, since the stone will not work for you.'
'So,' Zweig said. 'Assuming that's true, you still practically invited me to come here. You certainly *guided* me to this place. Why did you do that?'
'Because you are obsessed with obtaining the Tuaoi Stone.'
'Since I can do nothing with it, except, perhaps, sell it as the world's rarest artifact, why should that concern you?'
'You can do nothing with it as long as we possess it, but your obsession is such that you will not rest until you have it in your hands – and that, Herr Zweig, would be a catastrophe, if only in the sense that we who live by the sacred stone would be deprived of it.'
'I still want it,' Zweig insisted.
'I know that,' St Germain said calmly. 'And that explains why we guided you to us… to put an end to it.'
'To put an *end* to it?'
'Yes. It all ends for you here and now.'
Ingrid wasn't surprised to see that familiar flush of rage brighten her father's unusually pale cheeks, but she *did* find herself stepping sideways automatically to get closer to Gerry when her father reached into his jacket pocket and pulled out a pistol.
'Yes?' St Germain asked sardonically, raising one silvery eyebrow. 'And what do you intend doing with *that*?'
'I intend using it, *Saint* Germain, to my own benefit. I want you to open that glass case, give me the Tuaoi Stone, then lead me back down this hellish mountain. If you refuse, I'll kill each of you in turn. Now open that glass case.'
As Zweig, while keeping his eyes on St Germain, aimed the pistol threateningly at her, Ingrid felt all the hurt and indignity of her life welling up inside her, forcing tears to her eyes. She tried to stop the tears, not wanting to please her father even more, but the pain of this final, absolute degradation was more than she could hope to control. Feeling the tears trickling down her flushed cheeks, she bit her lower lip and choked back her pain.
Someone touched her and she twitched, then realized it was Gerry. She saw his outraged face, then felt his arm sliding around her, to pull her close to him.

A father? She'd never had a father – and now had to accept this brutal fact. So she accepted it, feeling drained, deprived of the will to live, and could only take comfort from Gerry when he affectionately squeezed her.
'The powers of the Tuaoi Stone,' St Germain said as calmly as ever, 'only reside in the hands of those who protect it. For your own good, Herr Zweig, I would advise you not to compel me to open the case.'
Zweig's reply to this was to cock the pistol and aim it more precisely at Ingrid, who hugged Gerry and defeated her pain with her deepening contempt for her so-called father.
'I don't think that even a son of a bitch like you,' Gerry said, 'would shoot down his own daughter in cold blood.'
'Ask me about her mother,' Zweig said, practically sneering. 'I murdered my own wife, so I could certainly do the same to my daughter.'
Even as the last shards of her broken hopes were tumbling about her, as she heard her own sobbing breaking helplessly from her, Ingrid saw through her tears that St Germain was shaking his head from side to side in denial.
'No,' he said, 'Ingrid *isn't* your daughter. She's not your daughter at all.'
Those words resounded through her like the pealing of bells.

Chapter Twelve

It sounded too good to be true, too miraculous to be real, but she saw St Germain's smile, quietly mocking, triumphant, then noticed the deepening flush on her father's face, his icy eyes growing larger.

' *Scheisse*!' he snapped. 'What is this you're – ' 'Ingrid is *not* your daughter,' St Germain repeated. 'She is in fact the illegitimate daughter of another man, a German Jew, with whom your second wife, Ingrid's mother, had an affair, shortly after you began mistreating her. Naturally, when your wife became pregnant with that man's child, she was terrified of telling you – more so because the man was a Jewish refugee from Nazi Germany and she knew how you would respond to *that* news. So when Ingrid was born, her mother, your wife, led you to believe that the child was your biological daughter; and once you had murdered your wife by slow poisoning there was no way for you to find out the truth. So, Herr Zweig, Ingrid is *not* your daughter. Ironically you have spent a great deal of your anti-Semitic life at least paying

for the *upkeep* of a Jew, Ingrid, if not actually showing her any affection. Ingrid's mother, even though in her grave, has had her revenge – and justice prevails.'

While the bells pealed even louder in Ingrid's head, the man who was not her real father turned purple with rage.

'*Quatsch*!' he hissed, waving the pistol like a club. 'I don't believe a damned word of this. And even if what you say is true, how would *you* know about it?'

St Germain smiled at Mephisto, then turned back to Zweig. 'Why do you think we guided Ingrid here with Mr Remick? We could just as easily have lost her and drawn him here alone.' Without waiting for a reply, he stared steadily at Ingrid, his eyes filled with an odd, wintry affection. 'Your real father,' he said, 'was once one of us, but eventually left us for reasons of his own. He was a good man – a just man.'

First exhilarated, then sad, filled with hope, then disbelieving, Ingrid felt more unreal every minute, wondering what she was actually hearing. When she looked at St Germain, with his strange, unemotional smile, she was convinced that he was not what he seemed, that he had not told them everything.

She thought of how she had come here, recalled Observatory Hill, the saucer-shaped pulsating light that had descended over her and Mephisto. She had been terrified, feeling herself disintegrating, then had felt herself vaulting over space and time, through giant moons and spinning stars. She had seen that in her mind, but had otherwise been blind, and her terror had rendered her unconscious until awakening in this place, stretched out on the bed of stone, being watched by Mephisto and St Germain, both wearing white robes. St Germain had been kind to her, patiently explaining all, but even then, as now, she had been convinced that he was withholding something.

'You used the past tense when discussing my real father,' she said. 'Does that mean he's dead?'

'Yes,' St Germain replied. 'Unfortunately, he died many years ago. However, please rest assured that your real father is not this man standing before you. He was in fact Paul Kahn, a German Jew and student of philosophy who suffered incarceration and torture by the Nazis, escaped while being herded with others to a concentration camp, and made his way over a period of many months to Argentina, where he lived in relative poverty, worked as a taxi

driver, and, as a humble man, continued his philosophical and religious studies in secrecy. Returning to Germany after the war, he met your mother when he was hired by Zweig to drive her where required, because she wasn't allowed to go anywhere alone. He and your mother, who was desperately unhappy with Zweig, soon fell in love, and had an affair that led to your birth. Before you were born, however, Zweig found out about the affair and decided to separate your mother from him by taking her to live in Switzerland, not letting her inform Paul Kahn where she was going. Distraught, having lost both the woman he loved and his still unborn child, Kahn went travelling again and ended up here, training to be an adept. Alas, he didn't last. He left before he could transcend. But Paul Kahn is your real father, Ingrid, though he never laid eyes on you.'

Too moved to speak, too unhappy for mere words, Ingrid just stared at St Germain through tearful eyes, seeing only a blur.

'After poisoning your mother,' St Germain continued in a precise, unemotional manner, 'Zweig started *his* frequent travels, taking you with him. The knowledge that your mother had been systematically poisoned by him only emerged many years later, by which time you were well away from Germany and your real father, Paul Kahn, one of the pure at heart, had been approached by us, agreed to join us, and came here for training in the Secret Knowledge. Unfortunately, as I said, he did not stay here long. For reasons of his own, he chose to go back down the mountain and resume his life as a normal man. However, soon after leaving us, he contracted cholera, died in a hospital in Calcutta, and was subsequently buried in an unmarked grave outside the city. Yes,' he added, nodding his head emphatically, 'that was your father – not this man standing here.'

Initially shocked and disbelieving, Ingrid soon felt huge relief and a growing serenity. She wiped the tears from her eyes, glanced at Gerry, saw his smile, then turned to face Zweig, that monster, not her father, finally understanding why she had rarely felt guilt at deeply despising him. He wasn't her real father, wasn't related to her at all, was just a brute who had tormented her all her life as the butt of his cruelty. Her real father had been a just man, a good man, and even if he was dead, at last she knew about him and took pride in the knowing.

'Go to hell,' she said defiantly to Zweig, staring steadily at him. 'It's where you belong.'

‘You Jewish whore!’ Zweig snarled. ‘No wonder I loathed you.’
He aimed at her with the pistol.
Yet even as Zweig took aim, St Germain raised his right hand, fingers outspread, over the glass casing of the Tuaoi Stone and, when the distracted Zweig glanced at him, waved the hand languidly to and fro.
A faint, unearthly light appeared around the glass case, then the case itself started opening in small, triangular sections, only stopping when the gleaming Tuaoi Stone was fully exposed.
Obviously beside himself, Zweig rushed forward to grab the Tuaoi Stone. He was, however, stopped in his tracks when a bass humming sound suddenly emanated from the small crystal pyramid, which, like its open case, became covered in an unearthly, pulsating light.
‘Take the Tuaoi Stone if you wish,’ St Germain said. ‘The risk is all yours.’
Ignoring him, Zweig reached out greedily to grab what he had wanted for so long, but the Tuaoi Stone glowed even brighter, emitted an even louder humming sound, and seemed to vibrate as if alive.
Zweig jerked his hand back and started sweating, as if terrified.
‘You want to possess the power of the crystal,’ St Germain said, ‘and what you want you shall have – *if* your conviction is greater than ours. Now prepare to defend yourself.’
At that moment, the magical power of the pyramidal crystal became visible in the shape of a bolt of electric energy that shot from its tip in a phosphorescent, hissing arc to form a rainbow between it and St Germain, then exploded around the latter and became a globe of pulsating radiant colours that lit up the gloom.
St Germain dissolved partially in the brilliance of that light, seemed to shimmer and float as if disembodied, then raised his right hand, in which the veins were clearly visible, and spoke with an unearthly, distant voice.
‘You have been called, Gerry Remick, and now you have come. You are one of the last of the pure at heart and therein lies your power. This man, Zweig, is pure evil, without redeeming features, and his presence is a threat to us all and must be removed. You now have that power, Gerry. You must use it for the good. In this instance, to do good, you must destroy the one who wants to destroy all of us. You profess to despise Zweig. Such contempt is well placed. Now turn that contempt into strength and, being a man of pure spirit, of faith, draw the energy of the sacred stone from me and into yourself, then

direct it at him.'
Hardly believing what she was witnessing, but feeling a sharp stab of fear, Ingrid choked back a groan when Gerry, as if in a trance, stepped away from her, then turned to directly face Zweig's pistol.
Zweig was purple-faced and sweating, his eyes enlarged and glacial, and he muttered an oath and took aim at Gerry, preparing to fire. Yet he seemed unable to do so, but instead started shaking violently, the weapon wobbling up and down as if out of control.
Gerry raised his right hand, spreading his fingers as St Germain had done. A stream of phosphorescent, hissing electric energy shot into him from St Germain, forming a rainbow between them, then shot in another arc from Gerry's outspread fingers into Zweig, exploding around him to become a cone-shaped ball of pulsating white light.
Dazed and disbelieving, convinced that she was having a bad dream, Ingrid throttled her own cry of dread by covering her mouth with her hands while observing the bizarre scene before her.
A sparkling, hissing stream of magical energy was flowing from the tip of the small crystal pyramid to the outspread fingers of St Germain, and from him, through the receiving vessel of Gerry, into the reeling, bellowing Zweig.
All three men were cocooned in a pulsating, unearthly radiance that seemed to have partially dissolved them, making them shimmer and look grotesquely distorted, fading in and out repeatedly, first clearly visible, then silhouetted, sometimes becoming almost transparent, revealing the tapestry of their veins, the geography of blood and bone.
Gerry and St Germain were quivering like bowstrings, but Zweig was still bellowing and shaking like an epileptic having a fit.
Ingrid looked on, aghast, shocked by what she was seeing, but took comfort from the possibility that Gerry, whether or not he knew it, was winning the battle.
Then it all changed. Ingrid knew it before she saw it. The light around St Germain weakened, then blinked out entirely, as his radiance was sucked into Gerry, leaving him drained.
Gerry looked like a human torch, a man burning to death, quivering in a cocoon of unnatural light, but still holding up his right hand, attacking Zweig with his new powers. Then he glanced at St Germain, saw that he had returned to normal, was shocked to realize that he was now on his own, then

shuddered as if abruptly losing faith and slumped in defeat.
'Have faith!' Mephisto called out to him.
But it was too late. Obviously drained and exhausted, Gerry fell to his knees as the hissing light streamed out of him and into the glowing Zweig, who, with a bellow of triumph, rushed across the room, pushed St Germain aside, grabbed the Tuaoi Stone before the case could be closed, and then, looking normal once more, backed away across the great hall, keeping them all covered with his pistol.
'It's *mine* now, isn't it?' he asked rhetorically. 'Now *I* have the power.'
'Oh, God,' Gerry murmured despairingly, ashamed of himself.
'You'll never get down the mountain,' St Germain said with soft-voiced conviction.
'Yes, I will,' Zweig said. 'It's no problem at all. Did you really believe that I'd depend on that bastard and bitch who forced me down the rope-ladder at gunpoint? No, *Saint* Germain, I didn't. I'm not a fool, after all. My wristwatch is a transmitter, a tracking device for my backup team, and right now two helicopters are on their way here to rocket-blast this place out of existence after picking me up. It doesn't end for *me* here, *Saint* Germain. Here it all ends for you. *Auf Wiedersehen.*'
He turned away and rushed out, disappearing through the nearest arched exit, his laughter reverberating eerily as his footsteps receded.
Then he was gone, taking the Tuaoi Stone with him, leaving only the silence.

Chapter Thirteen

Gerry was badly shaken by what had happened, still couldn't quite believe it, and thought of the disappearance of Zweig as if recalling a bad dream.

He, Gerry, had been defeated through his loss of faith. Taking a deep breath, gradually regaining his strength, he glanced at the empty glass case that had held the now missing Tuaoi Stone, felt ashamed of himself, then stood up, feeling older than he was, and found himself facing St Germain and the sombre Mephisto.
Shivering, he glanced at Ingrid, saw her wiping tears from her eyes, was appalled at how weak he felt, though knew his strength was returning.
Recalling how that phosphorescent stream of magical energy had travelled

from the crystal pyramid through St Germain, into him and on to Zweig – and how, when St Germain had left him alone, he had collapsed into a fear of the power that was coursing through him – he realized that Zweig's faith in his own invincibility had been greater than his own faltering faith in what he could do.

Virtue had been defeated by evil, because virtue was based on the kind of doubt that evil did not acknowledge.

As Ingrid dried her wet eyes, his heart went out to her, then he noticed that St Germain had changed, had in fact aged dramatically.

'What happened?' he asked, shocked by St Germain's appearance.

St Germain shrugged. 'You *know* what happened, Gerry. You are one of the pure at heart, a just man who can make use of the Tuaoi Stone, but you lacked faith in yourself, lost your courage when I stopped helping you, and thus were defeated by Zweig, who believes in himself. Now Zweig is in possession of the Tuaoi Stone and we are lost without it.'

'If nothing else,' Ingrid said, 'he probably believes that it'll be worth a lot of money as a rare antique. It's the original tip of the Great Pyramid, after all.'

'And that's the end of it?' Gerry asked. 'Zweig, with all his monstrous ambition, will be the Tuaoi Stone's new keeper and use it solely for financial gain?'

'Alas, not only for that,' St Germain said, looking concerned. 'Although normally the Tuaoi Stone's powers can only be used for good, you, Gerry, by your loss of faith, let Zweig gain some of those powers. And only you, having given him those powers, can take them away from him.'

'And *that*, Gerry,' Mephisto said, 'will be your final, most crucial test.'

Gerry glanced at Mephisto, saw his thin, seductive smile, turned away and studied St Germain again. He now looked twice his age, yet that wasn't what disturbed Gerry most, what gnawed suspiciously at him. He didn't know what it was, but he sensed that something was wrong, that St Germain had not told the whole truth, and might even have lied to him.

A secret society of *just* men? A secret Order for the pure at heart? Gerry couldn't quite accept this as the truth, and wondered why he had doubts.

'I feel drained of all energy,' he said, 'and *you*, St Germain, look even worse than I feel. I repeat: What happened?'

'The Tuaoi Stone can only be used rarely, with great discretion. Its powers must not be called upon too often, nor treated lightly. What I *started* to do to

Zweig – and what you *almost* succeeded in doing – is something that can only be done occasionally, and even then at great cost.'
'You gave your powers to me and now you're paying the price. And I lost faith and failed, thus giving Zweig the powers *I* could have had.'
'That is correct.'
'And you? What happens to you? This has obviously damaged you.'
'Naturally it has, but my time has come anyway. Being young, you will recover quickly, which is all to the good. But for myself, I am too old, *very* old, too old to measure, and this means that the powers the stone gave me drained my physical energy. I am ready to pass on, to transcend, but there are things left undone.'
'What things?'
'Things only known to the adepts – and you are not yet one of those. If you choose to stay here, to complete the magic number, you will learn what it is you need to know – but first you must defeat Zweig.'
To be the last of the first 666 was something that Gerry could only consider with a great feeling of disbelief. He had learnt the language of numbers, had solved its teasing riddles, but hadn't yet learned to live with it – and perhaps didn't want to.
He wanted the normal world, steel and glass, smoke and noise… and besides, he still had the conviction that something was wrong, that St Germain's picture of a society of just men somehow didn't seem right.
'You want me to challenge Zweig,' he said, 'and regain the magical powers of the Tuaoi Stone, after which I'll become the last of the just men. But how can I be sure you *are* just men, after what I've experienced?'
'Oh?' St Germain queried, raising one eyebrow. 'Just what do you mean by that?'
'I'm thinking, for example, of Helena Barbanell… She placed her faith in you, was convinced she would soon join you, and then was tortured and murdered by Zweig's thugs
– as, indeed, was the old Arab in Jerusalem, another of your faithful disciples. Why didn't you use your powers to save them?'
'We must all be tested somehow. What they suffered was for the general good. The two you mention kept their faith to the end and passed over to us. They both became adepts and returned to Earth, as immortals disguised as mortals, to continue our great work.'

‘I don’t believe you, St Germain. Something doesn’t sit right with this. You say you represent just men, those who are pure at heart, yet in order to protect the Tuaoi Stone you won’t stop at murder. If you people are truly pure at heart, how can you do such things?’
‘It is sometimes necessary to fight evil with evil deeds. We do such things with reluctance, but must protect the Secret Knowledge at any cost, even though it may damage us.’
‘And killing enemies damages you?’
‘Yes. It leaves a scar on the pure soul.’
The argument was persuasive, but Gerry still couldn’t accept it, and was just about to retort when Ingrid stepped forward.
‘Why did my real father leave the Order?’ she asked. ‘Did he disagree with you?’
‘I’m sorry,’ St Germain said, ‘but I cannot answer that question. Our disciples stay here voluntarily, and most of them *do* stay, at least until they become adepts and can leave as immortals. But occasionally someone will leave before transcending to the higher plane, usually for personal reasons, and those reasons cannot be discussed, except by a few.’
‘Since I’m his daughter, I think – ’
But before she could complete her sentence, Mephisto stepped up to her and stared steadily at her, his wintry-grey, almost silvery eyes focused hypnotically on her.
She blinked repeatedly and lowered her gaze.
‘We cannot discuss this any further,’ Mephisto said softly. ‘The personal beliefs of those who stay here are sacrosanct. Be content with the knowledge that *one* of your father’s reasons for leaving was to find you and regain the daughter he had lost. We can tell you this. We cannot tell you more. This subject is now closed.’
When Gerry saw Ingrid nodding, her head bowed, clearly blushing, he was reminded of Mephisto’s diabolical charms and felt the stirrings of rage.
‘If disciples stay here on a voluntary basis,’ he said, ‘does that mean I can leave anytime?’
‘Yes,’ Mephisto replied. ‘It is impossible to climb up here without our guidance, but relatively easy to go back down. That is part of our way.’
‘But why leave?’ St Germain asked, looking weary, his voice ravaged, ‘when immortality and magic can be yours? The magic number is 666 and you can

make up that number, thus becoming a guardian of the world, a magically gifted adept. Why walk away from this?'
'Because I don't believe what you're telling me. I think something's missing. You have limitless power, you'll sanction murder to protect it, and you use that power to interfere in the affairs of men when you think it's called for. I don't believe in that, either. I think it's morally wrong. You're tampering with the natural course of mankind and I don't think that's good.'
'So you will let Zweig escape with the Tuaoi Stone. You think *that's* better?'
'I won't be morally blackmailed, St Germain, and I'm leaving right now.'
'Please don't.'
Gerry reached out without thinking to take hold of Ingrid's hand, but was surprised to see her stepping away from him and moving closer to the smiling Mephisto. She was flushed and trembling, refused to meet his gaze, and instead looked into Mephisto's mesmeric eyes and, even worse, raised her face as if yearning to be kissed by those moist, sensual lips.
'Ingrid,' Gerry insisted, his pain too deep to bear. 'I repeat: I'm leaving here right now. Are you coming with me or not?'
'No,' she said, shocking him even more, 'I'm staying here. I want to be a replacement for my real father – and also for you. Since you've refused to become the last of the 666, then I'll take your place.'
'A place your real father rejected.'
'He rejected it in order to leave here and search for me. So it's my duty to stay here.'
'That isn't quite true, Ingrid. You were only *one* of his reasons for leaving. He must have had other reasons, but these two won't tell us what they were. We still don't know the whole truth.'
'I don't think they brought me here just to tell me some lies. I believe my father left here to search for me. Nothing else is important.'
Gerry felt like screaming. He was breaking apart inside. He couldn't believe that this woman, once so weak, was now being so strong. And that strength, which in one sense he admired, was now threatening their love.
'You'll stay here without me?' he asked, feeling shameful, a beggar.
'If you stay here I'll stay with you,' she replied. 'If you leave, go alone.'
'I thought you loved me, Ingrid.'
'I do.'
'If that's true, you'll leave this place, this Frankenstein's castle, and return

with me to where we both belong – the real world.'
'No, Gerry, I can't do that. Not even for you. I have to stay here.'
She stared solemnly at him, as she had done when they first met, but then turned away to smile at Mephisto. He smiled back and then took her hand, drawing her to him, eyes glittering hypnotically.
'You're tired,' he told her, speaking softly, rhythmically. 'So tired. So very tired. So tired you can't possibly stay in this chamber any longer. So tired you must sleep. Come. Come with me. Come to bed. You're so tired. Come with me…'
He was stepping backwards as he spoke, holding her hand, drawing her to him, and she followed him, unable to resist him or his voice, his hypnotic repetitions, her breasts flattening slightly against his chest when she almost fell into him.
The pain was lacerating, making Gerry almost choke, so he turned away quickly, not able to look at them, and had to wipe tears from his eyes and then take a deep breath.
'Great,' he said. 'Terrific. Let it be. Let it lie. Now how the hell do I get out of this place? I mean, just let me go. Where's the exit? *Where is it*?'
'It's over there,' St Germain said. 'The same doorway taken by Zweig. Just walk out. You'll be free.'
Taking a final look around him, his tears making everything blurry, Gerry finally met St Germain's gaze, was shocked again by his aged appearance, then looked sideways to see Ingrid and Mephisto walking from him, side by side, towards another arched doorway.
His heart started breaking then. He felt as if he was being stabbed. He wanted to call Ingrid back, to tell her he would stay here, but somehow he just couldn't do it, felt sick just to think of it. They were lying – he knew that; he simply didn't know why – and so he turned away, shaking with pain and grief, and went to the doorway indicated by St Germain.
He approached the doorway reluctantly, waiting to hear her call his name, but when she didn't, he shamefully looked back, not knowing what to expect. He saw what he had most feared – Ingrid departing with Mephisto – and then the melancholy smile of St Germain, so shockingly aged. The latter was staring steadily at him, unblinking, almost reproachful, and he shuddered, wondering what was wrong, then turned away and walked out.
He entered a narrow corridor hacked out of the natural rock, winding into

gloom and increasingly cold as it burrowed through the mountain. He realized, then, that the mountain was honeycombed with such corridors, that the great hall in which he had been with the others was the centre of a labyrinthine complex of considerable size. He wondered how they had constructed it, remembered the powers of the Tuaoi Stone, accepted that they could do anything they wanted and walked on, his heart sinking.

He was walking away from Ingrid, from all he loved, and this thought was crushing him. He was walking away, even more, from the knowledge that she had chosen to remain here rather than go with him – and this thought was killing him.

He sniffed back his tears, choked up, continued walking, and felt the cold deepening as the gloom gradually turned into darkness. He stopped walking when the darkness abruptly became pitch-black, felt the racing of his heart, a sickening wave of disorientation, then advanced again and saw a pinprick of light as he rounded a bend. He walked more quickly then, almost running, breathing harshly, and saw the pinprick become a sunlit opening that let in the freezing cold of the outside world.

He hurried into the light, into the grip of the icy air, was slapped by a wind that swept the snow in hissing streams across him. He was back on the narrow track, above a pirouetting gorge, saw the peaks and ravines of Kanchenjunga forming a tapestry of gleaming ice and black shadows wherever he looked. The sky was powder-blue, streaked with silvery lines of sunlight, but the brightness did not prevent the cold from eating into his bones. He had never known such cold. It bit at him like an animal. He winced and huddled into himself and turned right, down the winding track.

But he simply couldn't do it, and soon stopped, almost weeping. The cold was too harsh, the swirling snow too dense, and he sensed that it had been created deliberately to hamper his flight. The icy wind slapped his face, tugged him towards the cliff's edge, pushed him back into the rocks and forced him onto his knees. He bowed his head in defeat, turning numb, realizing that the pain he was feeling was not caused by this purgatory.

No, not the elements – and not the knowledge that he was trapped. He was in agony because Ingrid had failed him and gone off with Mephisto. He had expected more of her, had thought her love equal to his, and now he was suffering from the knowledge that his love had not been enough for her. He wanted to go back to her, to have her at any price, but felt the pain biting

through his numbness to render him helpless.
‘Oh, God, Ingrid,’ he whispered, yearning for her, dying for her, then slumped down on his haunches against the cliff face to let the snow gently cover him. ‘Oh, God, Ingrid, please don’t…’
‘No,’ she said. ‘Of course not.’
He looked up in surprise, not believing what he had heard, and saw her leaning over him, her fur collar turned up, the wind whipping her hair across her face and into her eyes. She smiled and reached down to him, her features blurred by snow, and placed her fingers lightly on his face, then wiped the tears from his cheeks.
‘God,’ she said, ‘you’re a really stubborn man. A real puritan, in fact. I love you. I promise! I really love you! Now please trust me and follow me.’
Stunned, disbelieving, exhilarated beyond words, he took hold of her hand, climbed unsurely to his feet, then let her lead him through the swirling snow, back into the mountain, his heart beating like a drum in his chest, his spirit soaring on high.

Chapter Fourteen

Ingrid led him back through the dark, narrow tunnel, through the belly of the mountain, and into the great stone chamber dominated by its high, steel-plated dome, where St Germain and Mephisto were standing in the same place, the latter no longer smiling, in fact extremely solemn, the former continuing to age rapidly in some mysterious manner.

The sight of St Germain made Gerry think he was hallucinating. The man was now wizened and stooped, and even his silvery hair, once so lustrous, appeared to be thinner. He was resting with one hand on the pedestal that had supported the now missing Tuaoi Stone and his breathing was emerging from shivering lips as if from a punctured tyre.

‘No,’ he said, as if reading Gerry’s thoughts, ‘your eyes do not deceive you. Now the truth will be told to you.’
He took another deep breath, as if fighting for air, while Mephisto stepped forward to stop in front of Gerry, his gaze no longer mesmeric but infinitely weary, and said, ‘You have just passed another test. Your moral integrity is

absolute. You have proved that you would give up anything, even what you most love, rather then compromise your beliefs. Now the truth must be told to you.'

'Was Ingrid part of the test?'

'Yes, Gerry, she was.' Mephisto smiled at her, not seductively, more like a father, then gave his attention to the ailing St Germain and said, 'The young man has proved himself to be a just man, a pure man, so tell him the truth… *Doctor Faust*.'

Initially startled to hear that legendary name resounding spectrally in his head, Gerry then remembered the many riddles laid before him throughout his lengthy journey and understood that the ambiguous references to Faust were at last about to be explained. He watched St Germain carefully, saw an old man growing older, his body rapidly becoming more frail beneath his loose-hanging Tibetan *chuba*, his grey eyes protruding above sallow cheeks, his words spilling from trembling lips.

'Everything you have learned so far about the civilizations of prehistory is true,' he said. 'Also true is that before recorded history, not long before the destruction of that civilization about 4,000 BC, a secret society of socalled just men was founded to protect and utilize the Tuaoi Stone, also known as the Lodestone, throughout the ages.'

'Why do you describe them as *so-called* just men?'

'Because evil does not come from without, but from within, and what we haven't told you, which shames us, is the tragedy of that inevitable corruption and its dreadful consequences.'

St Germain glanced at Mephisto, taking courage from his steady gaze, then sucked more air into his ravaged lungs and continued with his story.

'It would be pointless to describe the original guardians of the Tuaoi Stone, since they existed long before your known history and would mean nothing to you. However, it is a fact that throughout the ages, the secret society disguised itself in many different ways, that in your recorded history its members included such figures as Apollonius of Tyana, Jesus Christ, Buddha, the wise man of the so-called Arthurian legend, Merlin – whose test of a sword to be drawn from the magical stone in which it was set was actually a disguised reference to the Tuaoi Stone – and even Roger Bacon, the Franciscan philosopher, alchemist, and optical and astronomical genius, who, before his death in 1292, had described accurately in his writings:

spectacles, flying machines, motorized ships, carriages, and the process for making gunpowder.' 'And Christian Rosenkreuz?' Gerry asked.
St Germain sighed and nodded. 'Yes,' he said. 'The original Rosicrucians were actually members of our society, and at that time, Christian Rosenkreuz, like the Comte de Saint-Germain of the eighteenth century, was but one of the many Earthly forms I took on… but more of that later.'
He released his breath in a pained gasping, then sucked it in again, appearing to stoop lower every minute, to shrink under his loose robe.
'The original secret society was truly one of just men, but even just men are corruptible, and power, no matter how it is gained, inevitably corrupts.'
He nodded as if confirming that this was indeed so, then continued speaking. 'The tragic corruption of which I speak began in the sixteenth century, when I, in my Earthly incarnation as Doctor Faust, the historically noted magician, mesmerist and alchemist, and a German member of the society of the Tuaoi Stone, was approached by a fellow member, the famed Swiss alchemist, Paracelsus, who, no longer able to tolerate the severe moral restrictions imposed upon all members of the society, wished to use the Secret Knowledge to create immortality for himself – something strictly forbidden to all but the highest adepts. I take it you *do* know about Faust and Paracelsus?'
'Yes,' Gerry said. 'Paracelsus died in 1541, the same year as Doctor Faust, after laying claim to the creation, through alchemy, of the *homunculus*, widely reported as a tiny man endowed with magical insight and power.'
'Correct. But the *homunculus*, which many thought was a figment of Paracelsus' imagination, was actually created by him, in the shape of a disembodied spirit that was doomed to spend the rest of its time yearning for, and searching for, *normal* birth. And thus was born the legend of Faust: the man who sold his soul to the devil in return for Earthly wealth and power.'
St Germain sucked desperately for more breath, shuddered visibly and almost fell; when Mephisto rushed forward, took hold of his shoulders and steadied him, he seemed to regain his strength, nodded affirmatively at Mephisto, then continued speaking when the latter had stepped back again, his face gravely concerned.
'The real-life Doctor Faust, being myself,' St Germain continued, 'was born in Knittlingen, Germany, in 1480 and died in Staufen, near Freiburg, in 1541. As a magician, an alchemist, and originally an honourable man, I was chosen

to join the secret society and subsequently spent many years contentedly pursuing my alchemical studies, based on the magical properties of numbers. However, vanity was my weakness, the need for Earthly pleasures, and so shortly before my death, after being approached by the rebellious Paracelsus, I agreed to let my spiritual, or alchemical, energy be used in a forbidden experiment conducted by Paracelsus. That experiment led to the creation of the *homunculus*, while I, for my sins, was condemned by my brothers to the hell of an immortality in which I would endlessly die and be reborn as other men, with each of my mortal lives being longer than most, therefore truly tormenting. And thus, my young friends, the *homunculus* and Faust were both doomed to hell on Earth: one, myself, seeking the eternal peace of a proper death, the other, now named Homunculus, seeking a *normal* birth, also through death.'

St Germain raised his ravaged face long enough to give the solemn, almost tragic Mephisto a look of pity and anguished love, then lowered his gaze and spoke as if addressing himself.

'To cover up this extraordinary lapse in the formerly perfect record of the society of the Tuaoi Stone – and to repair the damage done to the otherwise unbroken secrecy of the society, which, at that time, went under the name of Rosicrucians – and to punish those who had caused the problems, Paracelsus was terminated by some members of the society – '

'Is that why his death is recorded as mysterious in all known historical records?' Gerry asked.

'Yes. And so, aware of the fact that the most efficient way of keeping a secret is to spread a distorted version of it, the society of just men condemned me, Faust, to the hell of perpetual reincarnation; deliberately spread the historically unproven stories about me being a charlatan and sodomite; and, finally, encouraged one of their members to become the anonymous author of the first *Faustbuch*, which, published in 1587, obscured the reality of the existence of Homonculus by introducing him to the public as the diabolically seductive fictional character, Mephistopheles.'

Here he nodded in the direction of the silent Mephisto, his face revealing his sorrow.

'The *Faustbuch* and, even more so, the infamous magic manuals also attributed to Faust, but actually written by the same anonymous member of the society of the Tuaoi Stone, further debased the truth about the real Doctor

Faust and were themselves based on the equally clever fabrications of other members of the society, such as Merlin, Albertus Magnus, and Roger Bacon. The various fabrications were then repeated with further embellishments throughout the ages in the published works of other members of the society, including those of Christopher Marlowe, the real author of Shakespeare's plays, as well as other notable Faust writers, such as Goethe and Thomas Mann.'

'Christopher Marlowe was the real author of Shakespeare's plays?'

'Of course.'

'The eighteenth-century Comte de Saint-Germain is quoted as saying that.'

'I repeat myself endlessly.'

Gerry stared at St Germain as if seeing a ghost. He felt ghostlike himself, not quite real, too stunned to be fully in command of his senses. Ingrid's gaze, which, without her spectacles, was lovely, made him feel more at ease.

'Christopher Marlowe also died in mysterious circumstances,' he said.

'Yes, he did. He was starting to use his power and influence for political purposes, so was punished, like me and Paracelsus, to the endless search through repeated reincarnation for the release of a proper death. He is one of us now – as are the many others so condemned – and so the secret society, as it is here and now, is no longer a society of just men, wise men, but a society of those like myself, Paracelsus and Christopher Marlowe: mortals who had sold their soul to the devil in return for Earthly pleasures, and are now suffering the hell of repeated reincarnation and the search for release in eternal rest.'

'And that's why my real father left here?' Ingrid asked him.

'Yes,' St Germain confessed. 'He was disgusted with our obvious degeneration and walked out on principle. He truly *was* a just man.'

'Yet you were still tasked with guarding the Tuaoi Stone,' Gerry said, as he noticed the blush of pride on Ingrid's cheeks.

'The true magical adept transcends the material state and therefore does not require the sacred stone, which is, in its essence, a material object whose magic powers are wrought from kabbalistic geometry. The *living* just men are now scattered across the Earth; those who have transcended are spread throughout the universe, beyond time and space. The Tuaoi Stone was left here to punish us with its magical powers; it is the powers of the Tuaoi Stone, the Lodestone, that reincarnates us again and again. Only when, if ever, we

are released from the eternal cycle of our mortality, will the sacred stone return to its natural state, being the seed of the universe.'
'So if I'm not here to join a society of just men, magical adepts, what am I really here for?' Gerry asked.
St Germain stared steadily at him, his eyes burning in a ravaged face, then turned that same haunted gaze on Mephisto, who nodded and spoke for the first time.
'Ask me the final question,' he said. 'You must know what it is.'
Studying Mephistopheles, or Homunculus, Gerry saw immense weariness, the veiled anguish of one who had suffered beyond mortal imagining. Yes, he knew what the final question was, and asked it without hesitation.
'How can Faust, Homunculus, Paracelsus and all the others so punished, find their release through a proper death?'
Mephisto smiled with relief, perhaps even gratitude. 'This can only be brought about,' he said, 'when an absolutely pure man refuses the magical, corrupting powers of the Tuaoi Stone. For that reason, I, Homunculus, taking human shape as the fictional Mephistopheles, must repeatedly descend to the normal world in order to tempt decent men with the promise of immortality and limitless power, in the hope of finding one who is completely immune to such temptation – an absolutely pure man. Any man so pure as to be tempted by me in the first place, will, if he succumbs to my blandishments, automatically become a member of this society – a society of the damned – and once the number of such men reaches the magical sum of 666 – the Number of the Beast – then the world of mortal men will be completely destroyed, like previous civilizations, by the beasts that come out of the sea and out of the Earth.'
'Fire and flood,' Gerry said.
'Correct,' Mephisto said. 'However, if one mortal man has the strength to *resist* my seductions, or temptations, and retain his absolute integrity, his pure soul, then those of us who have been doomed, including me and Faust, will be forgiven for our sins, released from this purgatory, and returned to the transcendental glory of true immortality – the spiritual afterlife.'
'And you, Gerry,' St Germain said, 'are the man to do that. You are one of the few to refuse what we have offered and walk out of here without becoming an adept. In your innocence, through the purity of your heart, you can save the world from destruction and release *us* from hell.'

Before Gerry could respond, Mephisto stepped up to him, held him by his shoulders and shook him gently. ‘Do it, Gerry!’ he whispered passionately. ‘To save us *and* your own world. Go out there and face your final test – your confrontation with Zweig, with pure evil – and if you succeed, thus affirming your moral worth, bring the Tuaoi Stone back here and let your purity free us.’

‘Free *us*,’ St Germain emphasized, ‘and in so doing save *your* world from destruction by fire and flood.’

‘But how can I…?’

‘You can *will* the powers back. You will only lose them completely if Zweig defeats you. Close your eyes and concentrate. Lean on your faith and *will* yourself down to Zweig, where he presently stands on the mountain path, waiting for his helicopter to rescue him. Do it now, Gerry! *Do it*!’

Gerry felt confused, disbelieving, excited. He glanced at Ingrid and saw her nod of affirmation, felt her faith flowing into him. He reached out for her hand, squeezed her fingers, released her, then bowed his head, closed his eyes and concentrated on Zweig.

At first he saw nothing, just the darkness behind his closed eyes, then he thought of fire and flood, of his world in devastation, and a fierce rage coursed through him, made him burn and vaporize, and he travelled down into himself, to the very centre of his being, then flew out from the prison of his body and winged down the mountainside.

He saw Zweig on a winding path, his feet kicking up snow, the Tuaoi Stone grasped firmly in one hand as, with the other hand, he shaded his eyes and scanned the sky over the pirouetting depths for his two helicopters.

Gerry found himself standing in the snow of that same track, above Zweig, looking downhill at him, hearing the sound of the helicopters approaching as Zweig waved his hand at them.

When he called out Zweig’s name, his voice echoed around the mountain peaks, making Zweig jerk his head around and stare up in surprise.

Gerry saw the face of evil, eyes gleaming malevolently. He thought of Ingrid and what she had suffered at the hands of this monster. His rage gave him back his faith, his belief in the power of goodness, and with that came the strength he would need for the battle to come. He felt himself expanding to link sky and Earth, becoming a bridge between time and the curved boundaries of space, which of course had no end. He drew his breath from

the ether, from the immortal soul within him, and raised his right hand to focus Zweig's gaze and let battle commence.
'It ends here!' he called out.

Chapter Fifteen

Zweig held the Tuaoi Stone tightly, glanced back over his shoulder, saw the American standing on the track above him and raising his right hand. He could scarcely believe his eyes, didn't know where the American had come from, but assumed that he could only have rushed after him as soon as he'd fled. Now the hated American was staring down at him.

'It ends here!' he called out.

Zweig had to smile. What a melodramatic statement! The American's words were echoing from one peak to another, seeming to come from the sunlit grey clouds as well as the shadowy depths – but then Zweig heard the muffled throbbing of his two helicopters that were, following the signals from his wristwatch transmitter, flying like homing pigeons towards him.

He glanced in that direction, trying to see the helicopters, but saw only the snow-capped peaks and their frightening, gargoyle shadows, the swathes of glistening snow.

No matter: the helicopters were coming. He could hear them distinctly. Again looking at the track, he saw it winding back and upwards, the American standing just where it disappeared around a bend in the cliff face, silhouetted against the sky. He looked pretty small up there, poised over a dizzying drop, the wind beating at his clothing and hair, as if taking bites out of him.
'Bring the Tuaoi Stone up to me!' the American called out, 'or I'm coming down there.'
Zweig had to laugh at the arrogance of the young fool. His laughter, echoing spectrally from one frozen peak to another, finally blended with the dying echo of the American's voice.
'You've *really* followed me to get the Tuaoi Stone back?' Zweig shouted up

the track. ‘If you want it, come get it!’
He raised the five-inch crystal pyramid over his head, felt the cold wind at his fist, almost numbing his fingers, then glanced sideways and saw one of his helicopters emerging from the grey haze. A wave of triumph coursed through him, lending heat to his freezing face, and he held the Tuaoi Stone firmly, willing its magic into himself, taking strength from his growing hatred for the world, then looked back up the hill.
The American was slithering down through the snow on the narrow track, a frail figure in that vastness of towering cliffs and deep gorges, his face grim, his eyes seeming to gleam dangerously even from this distance.
‘You won’t leave with the Tuaoi Stone!’ he shouted. ‘You’re wasting your time, Zweig!’
‘*You’re* finished, you American turd!’ Zweig bawled back. ‘You, that bitch-Jewess and the rest of them – the time has come for the lot of you. Goodbye and good riddance!’
Even as his words reverberated around the frozen peaks, his helicopters roared nearby, descending over the American, and started whipping the snow up around him like a minor tornado. The American threw himself to the ground, was blown towards the edge, wrapped his arms around a rock and clung to it, above that dizzying drop.
Zweig waved at the helicopters, grinning, exultant, watched as one of them flew away from the cliff face and up toward the dome of irregular steel plates that covered St. Germain’s hideaway. He saw its missiles thrusting out like giant phalli, and that made him even more joyous.
Any minute now, those missiles would put an end to St. Germain’s retreat and the three pigs inside it.
As the first helicopter descended towards the steel dome, the second flew back towards the path to once more whip the snow up around the American and try to blow him over the side with its slipstream. He clung to the rock as the snow howled around him, let go and slid backwards, started disappearing into that swirling whiteness as if being devoured by it.
Expecting to hear the American’s scream as he plunged into the gorge, Zweig held his breath, felt mirth bubbling up inside him… then felt the Tuaoi Stone quivering in his fist, as if coming alive.
‘*Mein Gott*!’ he exclaimed.
He almost dropped the precious object, but soon regained his senses, then

looked uphill in time to see the American emerging from the swirling, howling snow with his hand raised on high. He wasn't looking at Zweig, but at the helicopter above him, and his body was quivering in an unnatural manner – just like the object in Zweig's hand.

Zweig knew what was happening. The Tuaoi Stone had come alive. The American pig was trying to get back the powers that he, Zweig, had stolen from him. Zweig chuckled triumphantly, feeling the power course through him, then looked again at the American's upraised hand, wondering what he was doing.

The helicopter had pulled back, letting the snow settle around him, and the American was now clearly visible where he stood, dangerously close to the edge of the narrow, curving path, above the snow-filled, blackshadowed gorge, his whole body quivering like a bowstring, even as the crystal pyramid vibrating in Zweig's hand started warming his cold palm.

Then the American clenched his fist. His body rocked as he did so. The helicopter above him also rocked, started shuddering as if trying to pull away, then rocked even more violently as the pilot, obviously desperate to escape, released his missiles in the direction of the American.

Zweig heard the missiles screeching, saw two streams of white smoke, then the cliff face exploded behind the American, obscuring him in spewing snow, melting ice, flying debris and boiling smoke. The sound reverberated above the gorge, debris rained down, smoke swirled, but then the American reappeared magically, standing upright, still quivering like a bowstring, his right hand still upraised.

Zweig felt his own powers weakening and was shocked, even frightened, then he focused his strength with his hatred and felt the Tuaoi Stone vibrating more rapidly.

The helicopter roared, flew to and fro, swayed from one side to the other, clearly out of control, then exploded.

Zweig felt the shockwave, was actually bowled over by it, but kept a tight grip on the Tuaoi Stone as he fell into the deep snow. He cursed and sat up, spat snow from his mouth, shook his head to clear it and fixed his gaze on the steeply winding path as the second helicopter sent its missile shooting down at the metal dome of St Germain's hideaway.

The ground erupted around the metal plates, spewing snow, rock and soil, the yellow flames and black smoke boiling up in a sinuous, deadly dance before

the flames sank back and flickered out and the smoke was blown away.
The stupid bastards had missed the dome.
Even as the remaining helicopter pulled away to fire its second round of missiles, Zweig felt his energy flowing out of him and into the Tuaoi Stone, then his hand shook as his power flowed invisibly from there into the raised hand of the American.
Zweig tried to stop it, to *will* the energy into himself, but he felt himself weakening, saw the helicopter shuddering, cursed aloud when he heard it exploding, then saw it turn into a fiery ball that stained the whiteness with black smoke.
He couldn't understand it. He had assumed that the power was his. He couldn't accept that the American could get it back and then turn it against him. He gripped the Tuaoi Stone tighter. It was quivering violently in his hand. It was starting to burn through his skin and yet he still wouldn't let it go.
He was trapped here on the mountain. Now it was between him and the American. He could feel the American draining him of strength even as he was coming towards him.
Yes, the American was coming down the path, walking awkwardly through the deep snow, looking in Zweig's general direction, but intent on the Tuaoi Stone. Zweig knew that its power could not be shared, that he must fight to retain it.
He glanced to his left, saw the sheer face of the cliff, glanced right and saw the black-shadowed depths between the vast, snow-capped mountain peaks. He felt minute in that lonesome grandeur, isolated from the world, and he accepted that if he couldn't finally conquer that world, he would rather destroy it completely than have his failure remembered.
If his perverse use of the powers of the Tuaoi Stone could at least serve that purpose, he would willingly risk everything for it, even his own life.
Yes, he would let his hatred for the American, for Ingrid, for life itself, be his motivating force and source of strength. He would let his belief in the power of evil over good be his armour and shield.
He would gamble on that.
Gritting his teeth as the Tuaoi Stone scorched his hand, he *willed* his anger into manifesting itself as a physical force. He saw the American slithering down through the deep snow, was surprised at how determined he seemed, so

willed his malice and hatred into a force that would prevent his advance. The Tuaoi Stone quivered in his hand and he had to scream to endure the pain, and then he felt his raging energy vaulting forth to envelop his enemy.
The cliff face beside the American split open, spitting snow at him when the ground in front of him broke apart as if in an earthquake. The American jumped back, was obscured by swirling snow, glanced down at the gap where the path had been solid, at that new, dizzying drop into the bowels of the mountain, then stiffened, as if gathering his strength or courage, and suddenly leaped across to the other side.
He rolled through the snow, clambered back to his feet and started advancing again, his body still quivering as he drew power from the Tuaoi Stone in Zweig's hand, his eyes gleaming with a fierce, unnatural light that Zweig could not avoid.
The ground in front of Zweig split open, cracking and snapping, and he looked down into those dizzying depths, then gasped and stepped back.
He was trying to gather his wits together when the mountainside went berserk.
The cliff face exploded, showering snow and stones around him, blowing him sideways, towards the edge of the path and almost over the side. He screamed without thinking, saw the gorge below spinning, then was picked up in another angry blast, hurled away from that fearsome drop, slammed backwards and fell into the snow.
The sound of the explosions were still reverberating and his ears were still ringing when the fear that he had lost the Tuaoi Stone seized him and he squeezed his fist tighter upon it. The stone was still in his hand, its heat burning gradually through his skin and causing him agony.
He groaned and bit his lower lip, tried to block out the pain, then saw that the American was hurrying downhill and realized that he and that hated figure were now locked in mortal combat, engaged in a battle of wills that could only end one way.
The loser would be obliterated; the winner might well own the whole world.
Convinced that virtue lacked the resolute will of evil, he summoned up every memory that would add to his hatred and give him the strength he had lost…
The contemptible Jews he had tormented as a Hitler Wolfcub; the Russian beasts who had raped him in the ruins of Berlin; all the enemies he had made in Argentina and Paraguay; the government ministers who had turned against

him when the going got rough; the numerous spies and assassins who had worked for him and then betrayed him; his two wives and their relatives; not forgetting Kuragin and Hans and that bitch, Elena; then Saint-Germain and Ingrid, who wasn't even his daughter, and finally this stubborn American… Yes, he thought of them all, from his distant past to the present, and let his hatred for them simmer and boil until it burned like his scorched hand.

Then he felt the Tuaoi Stone quivering more violently than before, its magical forces raging between him and his advancing enemy, and looked up to hurl his will at everything he could see, even as the despised American approaching him did exactly the same.

Their conflicting forces sundered the mountainside, making it roar in protest, cracking open to spit snow, rock and soil through a curtain of flame and smoke. Debris showered into the gorge, red-tinged yellow flames shot upward from the ether, and black smoke swirled over the chaos.

Zweig felt that he was burning. He seemed to be expanding. He breathed deeply and focused on the American. He had the confidence of evil, the will of true malevolence, and he felt the power flowing from the Tuaoi Stone as the American's faith again wavered.

'Yes!' Zweig growled. '*Yes*!'

His hatred attacked the mountain, scorched the solid rock, melted the snow and turned it into scalding water. The American stumbled and fell, was blown sideways with the debris, rolled close to the edge of the cliff and almost rolled over. He rolled back just in time, scrabbling wildly in the snow, somehow managed to get back on his feet and raise his snow-covered head. He looked terribly young, almost handsome, and had brilliant blue eyes.

'You evil bastard,' he said.

Yet his faith was wavering again. Zweig felt it and was exultant. He laughed aloud and hurled his will at the American and the cliff face beside him.

The noise was catastrophic. The scorched rock cracked and exploded. The snow was the scalding water that boiled through the flames that emerged from the swirling veils of black smoke and made the air hiss.

The path beneath his feet shuddered. The American ran towards him, clearly determined to grab him, but Zweig made the path in front of him split open to form a dizzying drop.

The American cried out as he fell across the shrieking, splitting ground. He grabbed hold of one side, his feet remained on the other, and he briefly

formed a heaving, frantically twisting bridge across that terrible chasm. ‘Oh, Jesus!’ he cried out.
Zweig laughed at that, held the Tuaoi Stone tighter, saw the American stretched out across that horrifying drop and watched with pleasure as his feet slid off the far end and his body fell down.
Gerry Remick was hanging by his fingers from the edge, above a drop that fell a thousand metres to a bed of sharp rocks.
He was trying to pull himself back up, but his fingers were slipping.
‘Now call on your virtue!’ Zweig bawled as he held up the Tuaoi Stone. ‘See how far virtue gets you!’
‘Gerry!’ someone called out. ‘*Gerry*!’
Looking up, Zweig saw Ingrid.
She hadn’t materialized magically out of nowhere like Gerry, but had obviously come down the normal route from St Germain’s hideaway, using the same dangerous path that curved around the cliff face. She was struggling down through the snow, clinging fearfully to the rocks, obviously trying to keep away from the sheer drop on one side as she hurried towards that awful chasm where Gerry was still hanging on.
Zweig grinned and lowered his gaze. He saw Gerry’s fingers slipping. Gerry was staring at him, his eyes bright and wild, desperately trying to pull himself back up, but gradually weakening.
Zweig stepped towards him, stopped just by his hands, glanced only briefly at that dizzying drop below him, then grinned and raised his booted foot to stamp on Gerry’s fingers.
‘*Auf Wiedersehen*, my young friend,’ he said.
Ingrid slithered to a halt at the other side of the gap, gasped with horror when she saw that fearsome drop beneath Gerry, then leaned over, ignoring the howling wind, and screamed, ‘Don’t let him do this to you, Gerry! I love you! I *need* you!’
Zweig raised his booted foot a little higher, deliberately tormenting Ingrid, then slowly pressed the booted foot on Gerry’s fingers.
‘Shit!’ Gerry cried out. One hand let go of the edge. He was now hanging by one hand over a thousand-metre drop, his legs kicking frantically, while Zweig slowly crushed the fingers of his right hand with his steel-studded boot.
‘Think of me, Gerry!’ Ingrid screamed against the wind. ‘I *love* you! Have

faith!’
Zweig laughed and raised his foot. He looked down at bleeding fingers. He stopped laughing when he saw the blazing faith in Gerry’s eyes, saw his panic giving way to determination and a magical strength. Gerry swung his dangling hand, grabbing the edge close to his other hand, gritted his teeth and started pulling himself up as the power flowed back into him.
‘*Mein Gott*!’ Zweig exclaimed, disbelieving, suddenly panicking, his shoulders slumping as the power was drained from him and flowed into Gerry. Stunned, he stepped forward, intent on stamping more brutally on Gerry’s two hands, but Gerry’s eyes were blazing at him, filled with faith and the power of love, and Zweig was picked up and thrown back like a rag doll to land on the snow-covered rocks.
Stars exploded before his eyes, sharp pains darted through his bones, and he cried out and rolled away from the edge. He still had the Tuaoi Stone, which now was redhot, and he screamed and let it fall as he scrambled to his feet. He glanced back at Gerry, saw him clambering over the edge, was riveted by the brilliance of his gaze and then felt himself breaking down.
‘No!’ he bellowed like a wild beast, his voice hideously distorted, that single word reverberating around the mountain peaks to come back and mock him.
‘*No*! *No*! *No*!’
Then it all ended for him. The pain told him that this was so. He was picked up again, flung against the face of the cliff, pummelled by exploding rocks and sucked into a whirlwind. More of the cliff face exploded into smoke and flames, spewing rocks and soil and snow, and he was scalded by hot, geysering water as he fell down again. A section of mountain collapsed upon him, crushing him, choking him, filling his mouth and nostrils with hot ash and scorched stones and dirt. He heard roaring, smelt smoke, was being roasted in hell’s fires, but managed to look out, to catch a final glimpse of Earth, and saw Gerry picking up the Tuaoi Stone with a cry of triumph.
Gerry held the Tuaoi Stone above his head and let the sunlight flash off it. Ingrid’s laughter was loud and clear.
Zweig was in hell. He was buried in snow and rocks. He was forced to watch Gerry wave the Tuaoi Stone to and fro, then abruptly disappear, as, using the powers of the sacred stone, the crystal pyramid, he closed the gap in the path and made his way back to Ingrid.
Zweig heard them both laughing. He knew they were embracing. Then he

heard their laughter receding as they walked away from him, obviously thinking him dead.
But he wasn't dead. No, he would never die. He would let his enduring hatred sustain him and return him to the real world.
He got out somehow. It took a long time, but he made it. He pushed the rubble aside, managed to roll onto his belly, then struggled out of what should have been his grave, away from the melting snow and soaked ash and pulverized rock. He looked down at his scorched, torn clothing, at his black, blistered hands and arms, then gritted his teeth against the pain and crawled forward on hands and knees.
He commenced his ungainly crawl back up the mountain, refusing to die.

Chapter Sixteen

In a daze of disbelief, feeling drained yet exhilarated, Gerry let Ingrid lead him up the treacherous mountain path and back into St Germain's great hall beneath the steel-plated dome. He held the Tuaoi Stone in one hand, Ingrid's fingers in the other, and he entered in the glow of his love for her and his own renewed faith.

He now believed in himself, in the love that joined him to Ingrid, and knew that as long as he lived he would never forget this day. At last he knew that life was an infinite mystery, and that love, which could not be its root, could at least give it meaning.

He also knew that the material world was no more than a blindfold, a necessary reduction of a view that could otherwise encompass the universe. Everything and anything was possible, needing only the courage of one's convictions, an absolute faith… another kind of love, after all.

Yet what he saw, when he entered the great hall, almost made him lose faith again.
St Germain, or Faust, was ageing with dramatic speed. He was gasping desperately for breath, trembling like an epileptic, and leaning on Mephisto, or Mephistopheles, for support, like an old man with crutches.
When he saw the crystal pyramid in Gerry's hand, he openly wept.

‘It is over,’ he gasped, his voice breaking. ‘At last we are freed!’
Mephisto held him as he lurched forward, pulled him back, supported him, then half walked, half carried him across the floor and laid him down on the stone bed upon which Gerry had first awakened in this strange place.
St Germain lay there expectantly, breathing harshly, licking parched lips, staring up at the steel-plated dome that shut out the sky.
Mephisto said nothing, but offered Gerry a sad smile, then took the Tuaoi Stone from him and placed it back on the pedestal where it belonged. He then took Gerry’s hand and placed it gently on the crystal pyramid, smiled encouragingly and looked down at St Germain, who was clearly dying.
‘Who art thou?’ St Germain, the decaying Faust, asked of Mephistopheles.
‘Part of that power, not understood,’ Mephistopheles replied, still pressing Gerry’s hand onto the Tuaoi Stone, ‘which always wills the Bad, and always works the Good.’
Recognizing those enigmatic words from Goethe’s *Prologue to Heaven*, and remembering that Goethe was also a member of the secret society, Gerry looked down as Mephistopheles released his firm grip, then quickly, almost in panic, removed his own hand from the Tuaoi Stone.
No sooner had he done this than a faint, unearthly light emanated from the crystal pyramid, became a brilliant, pulsating radiance, then exploded into fiery dazzling striations that wavered and dazzled.
Startled and bewildered, Gerry hurried to Ingrid’s side and took hold of her hand. She smiled nervously at him, then looked up, thus making him do the same, as an odd yet strangely familiar sound increased in volume.
It was a bass humming sound, an infrasound, almost physical, and as it filled the chilling silence, making the very air vibrate, Gerry saw the metal plates of the high dome opening up again. They moved farther apart, large triangles glinting slightly, forming a gigantic, majestic, flower-shaped frame for blue sky and boiling white clouds.
The clouds seemed to be unnatural, gathering together as if alive, low enough to cast their shadows on the snow around the gradually opening metal plates.
Then the plates disappeared from view, sliding back into the surrounding rocks, leaving nothing but that wide circular space.
At that precise moment, as the infrasound cut out, a higher sound, a sort of unearthly buzzing, came from the Tuaoi Stone.
Glancing at the miniature crystal pyramid, Gerry saw that it had become

covered in that weird, unearthly light and was vibrating violently, at great speed, as it gave off its piercing sound. He looked at the stone base, saw Mephistopheles kneeling there, tenderly holding the hand of the dying Faust, St Germain, as both of them began to dissolve in the spreading white light.
'It is done!' Faust croaked with his dying breath. 'We are finally released!'
'Yes!' Mephistopheles said. 'We have no more to fear. It is ending right – '
His last words were drowned out by a fierce crackling and snapping as a phosphorescent stream of energy shot up from the Tuaoi Stone's tip in a wavering, vertical line and then exploded in all directions through the clouds, like bolts of unnaturally coloured lightning. The clouds glowed red and yellow, turned to swirling black smoke which, gaining speed, became a whirlpool viewed upside down. The spinning vortex revealed the stars, sucked the streaming darkness in, disappeared to let the stars pour through the hole like a deluge of diamonds.
Gerry's bewilderment had gone, been transcended by awe, but he tugged Ingrid even closer to him as he stared all around him. The great hall's stone walls had mysteriously disappeared. He saw only the streaming stars. Close by, he saw Mephistopheles still kneeling by the stone bed, holding the hand of the spectre that had been St Germain, or Faust. Both figures had become unreal, were dissolving in their own light, their Tibetan robes melting like honey being poured from a pot, a web of veins and bones vaguely visible through the gauze of their shrinking skin.
The light seemed to be eating at them, burning through them, erasing them, and then it became too bright to face, forcing Gerry to turn away. He saw Ingrid's eyes close up, very big, filled with love, and was drawn into them – into a sky filled with alien moons and even more brilliant stars.
'Have no fear,' he heard Mephistopheles say. 'What you see will not harm you. Let your love be your…'
But the voice faded away – or perhaps had never been
– and Gerry felt himself falling through a silence filling up with approaching noise. The alien moons turned inside out, the stars bled into one another, the darkness rushed at him and away in the same dazzling instant. Then noise: an explosion, a cataclysmic bellowing, the rending of the very fabric of time and space, the universe and what lay beyond it folding back in upon itself. He saw Ingrid and himself, their reflections growing larger, rushing at him, at her, and passing through them and repeating this endlessly.

He was here and she was there. She was here and he was there. He joined her and became her, looking out through her eyes, and saw the light of the empyrean cascading in silvery splendour. He travelled through the empyrean, though the light of the highest heavens, and was her and himself at the same time, male and female, sol and luna, sulphur and mercury, the secret fire of alchemical transformation, the very seed of existence. That fire came from the Tuaoi Stone, the crystal tip of a burning pyramid, and its phosphorescent stream of luminous energy rose on high from the depths, joining the sacred stone to the ether, the Earth to the cosmos.

He felt himself as her in flight, his being curving to meet itself, transcending time and space and experiencing all on the instant: the past, the future, the multiplying dreams of the present, with Zweig dying and living and dying again, while a helicopter, trying to escape the mountains, kept circling endlessly.

Was that Hans and Elena? Was that Hans *or* Elena? They were looking down, aghast, at the mountain peaks and what was happening to them. Then they were swept away, in fire and smoke, streaming light, and he, as she, saw St Germain in Faust's final dissolving.

His skin was melting off the bone, the bone crumbling to dust, then Mephistopheles, holding a handful of dust, bowed lower and wept. His tears turned to blood, his skin flowed like melting wax, and with a sigh that was like a rushing wind he disappeared in a shimmering light.

That light exploded into a fountain that geysered up to the heavens, fanning out to form great wavering loops and spirals, then a web of criss-crossing phosphorescent lines that spread out through the cosmos. The joining lines formed great triangles that then multiplied endlessly, each triangle intersecting another to create more of itself, this process repeating itself countless times, until time itself ended.

The triangles webbed the cosmos with mathematical precision, framed the stars and spinning moons in black holes where time had no meaning.

He and she as one saw it, were part of it, streaking through it, were engulfed when the cosmos turned itself inside out and swept them away in a wave of light filled with thunder and crackling. The light soared high and narrowed, became a majestic pyramid, a window to other pyramidal cities scattered across a younger Earth under alien stars. Then a sudden rush of time, aeons racing by on the instant, fire and flood sweeping away the mighty cities to

leave grim desolation. The smoke drifted and disappeared, great waves covered the crumbling ruins, then the water soaked into the soil and the years brought the dust back.
That dust obscured all, obliterated time and space, moved on to show another mighty pyramid on the vast plain of Giza, its crystal tip reflecting the sunlight like a lamp flashing on and off.
Then he as she saw them – in the gloomy chambers of the Great Pyramid – that roll call of the highest of the high, the magical adepts, the just men, the pure at heart, all resurrected here where time and space had no meaning, where the centuries bled into one another and became the same moment. Yes, he as she saw them, the last of the just: Pythagoras wrestling with his soul and the infinite mysteries of numbers; Plato helping to lay down the philosophical foundations of Western culture; Jesus being prepared for his noble, anguished calling; Merlin learning the Secret Knowledge to become the prophet of the Holy Grail – and all the others, great and small, known and unknown, who had given of themselves throughout the ages to better mankind… until the dawn of their corruption, first Paracelsus, then Faust, creating the *homunculus* that became Mephistopheles, the three of them doomed to wander the Earth in many disguises.
He and she as one saw them, here and now, then and there, as they saw the crystal tip of the Great Pyramid coming brightly to life, picking them up and sweeping them away through other pathways of time and space.
They were catapulted, somersaulting, through the vaults of their own minds, across the curved reaches of the cosmos, and saw exploding galaxies, dying suns, alien moons, great spacecraft and glowing discs traversing vast silence, heard the voices of history all around where the silence collapsed.
They travelled out and returned, back to time's constant future, past Faust and Mephistopheles, Zweig and Hans and Elena, past a helicopter endlessly circling a forbidden mountain – travelled back through their joined mind and became two again, separating, returning to mortality and the great hall's final moments.
God! Ingrid thought. *What*…?
The fire of life spewed from the Tuaoi Stone, reached the heavens and beyond, making time and space one, joining the past to the future, than spat out its many imprisoned souls by aborting itself. Thus reprieved, it exploded, belching fire and smoke, bellowing, smashing through the rocks, through the

mighty walls of the mountain, and obscuring the brilliant light of day in the dust of its dying.
No more, Gerry thought.
No more.

Struggling with the controls of the bucking helicopter, Hans thought he was losing his senses. He had been trying for more than an hour to fly away from the mountain, but the gyro-controls had stopped working, the sky was changing all the time, and no matter which direction he flew in, he always returned to the same place, directly above the great hole into which Zweig had dropped.

Now his fuel was running out, Elena was becoming hysterical, and when he looked down, having no choice but to land, he finally *did* lose his senses.

'Oh, Christ!' Elena wailed, grabbing his elbow. 'What the hell's *that*? Oh, my God, it's – '
Hans started counting. It was all he could do. He had lost the power of speech and numbers were all he could think of as his whole world turned inside out. He was counting the seconds off, the final seconds of his life, and the numbers were a magical incantation that he thought might protect him. Perhaps he didn't really speak them. Perhaps he only *thought* them. He only knew that the numbers represented the last words to pass through his mind as Elena grabbed his elbow, the helicopter turned over, and that extraordinary stream of fire, that phosphorescent, weaving thread, shot up from the inky depths of that circular space in the snow and exploded through the clouds on all sides as the mountain peaks rushed at him.
Elena shrieked. Swathes of snow filled his vision. He saw the spinning hole erupting, the mountain face spewing rocks, then another face, Zweig's face – yes, Zweig! – turning towards him. Zweig badly burned and battered, on hands and knees like a mountain goat, trying to make his painful way up a path in the face of the cliff.
Zweig glanced over his shoulder as the helicopter fell upon him. He started bellowing in protest, waved his hands in wild semaphore, seemed to stare directly up at Hans and Elena. But Hans refused to believe it, not wanting to die this way, so he kept counting and counting, into his death, through

eternity, hearing Elena's final shriek, as he would hear it forever, before exploding with her and Zweig and the helicopter, finally finding the release he had always wanted from the hell of his life on Earth.

Zweig looked up in a daze. He couldn't believe what was happening to him. He had burned in the fires of hell and escaped – and now *this* had to happen. He turned around on the mountain path, his body drawn to the helicopter, forgetting that his own helicopters had been blown to pieces and now responding instinctively to a sound that promised escape.

Then he saw *that* helicopter, those faces staring down, thought, *No*! *It can't be*! And then heard himself bellowing and waved his hands in panic and finally pressed his fingers over his eyes, seeing darkness, his grim life, the futility of it all; then started counting off the seconds, each one an eternity, giving him time to wonder how that helicopter would crash upon him; also time to think of numbers that kept repeating themselves in his head – one second, two seconds, three seconds, four – and then he looked up again, saw that nothing had changed, so threw his hands once more over his disbelieving eyes, heard the roaring, felt the weight, was crushed and consumed at once, then dissolved into the flames of hell with Hans and Elena.

And died at that moment.

Chapter Seventeen

Gerry opened his eyes to the brilliant Himalayan sky, tried to separate himself from the clinging strands of his vivid dream, then in coughing the dust from his lungs knew the dream had been real.

Carefully sitting upright, fully expecting to find broken bones, he first saw that Ingrid had been lying close beside him, then he looked around in amazement at the shattered remains of what had been St Germain's great hall. The walls were pulverized rubble and the dust from their remains still drifted about them, falling upon them like shrouds.

Ingrid groaned softly, then opened her eyes, wiped dust from her face, from

her clothes, and gazed dreamily at him. She studied him for some time, as if wondering if he was real, then smiled in a languorous, sensual manner and reached up to him.
‘Are you okay?’
‘Yeah,’ he said, ‘I’m okay. I feel strange, but I’m

okay.’

He stroked her forehead with his fingers, wiped some dust off, then slid his hands under her shoulders and helped her sit upright. She nipped his neck with her teeth, sucked his skin, hugged him tightly, then pushed herself slightly away from him and looked all around her.

‘My god,’ she said. ‘What – ?’
‘It’s all gone,’ he interjected, anticipating her question. ‘*All* of it – all gone. St Germain and Mephisto and the Tuaoi Stone and even this monastery – or whatever it was – all of it, gone. *We* were picked up and sucked into something and then spewed out again. We’ve been released, just as they were, and now it’s time to go home.’
Ingrid looked beyond the ruined walls, at the snowcapped peaks and gorges, at the barren plains of the distant Tibetan Plateau and the green fields of India farther on. They were sitting on the roof of the world and that world seemed too far away.
‘Do you think we can make it back down?’ she asked him, her furrowed brow displaying grave doubts.
‘Yes,’ he said, ‘I think we can. Mephisto said it was difficult to come up here, but relatively easy to get back down. He said that it was part of their way – and their way is our way. So come on. Let’s get going.’
‘Do you love me?’
‘God damn it, haven’t I proved it?’
She smiled. ‘Oh, my hero!’
He stood up first, helped her to her feet, looked around him at the shattered floor, the ruined, dust-shrouded walls, saw a gaping black hole where the Tuaoi Stone’s pedestal had stood, a larger, rectangular black hole where the bed of stone had been, then found himself shrugging and grinning disbelievingly as he tugged at Ingrid’s hand and said, ‘Well, it was certainly

something of an adventure. Let's just say it was that.'
They went across the dusty rubble of the pulverized stone-slab floor, then through a gap in the broken remains of a wall. He realized that he had changed forever, that he understood himself at last, and that his world, which had once seemed so familiar and secure, would never again have the same appeal.
Yes, he had changed, had seen the world beyond this one, and had learned that most Earthly aspirations were no more substantial than the dust of Faust's remains in Mephistopheles' hand. What was left was his love for Ingrid, his mind and heart, her love for him, and he knew that when these were combined he could transcend himself.
The just men were out there somewhere. They were scattered like the wind. They were here – and there also – in the past and the future, and they studied the Secret Knowledge, which was the study of the self, and got on in their quiet way with their lives, letting the world look after itself, as was intended by nature.
He, too, could be a just man and live a noble life. He, too, could go into exile and inhabit his secret self.
He led Ingrid out of the ruins, onto the path that ran down the mountainside, gazed over the pirouetting depths and then looked straight ahead. A Sherpa's mule, forlorn, unattended, was standing right there in front of him.
'You think St Germain arranged it?' Ingrid asked him.
'Yes,' he said. 'Probably.'
She brushed the auburn hair from her eyes, hazel eyes, clear and loving, winked at him and smiled in a mischievous manner, then took hold of the dangling reins and swung herself up onto the saddle.
'Hey, kid,' she said, imitating Lauren Bacall, 'do you know how to whistle?'
Amused, washed clean by his love for her, he placed a couple of fingers to his lips and whistled inexpertly.
The mule, not offended at all, moved forward and stopped right in front of him, its rheumy eyes fixed upon him.
'Get on behind me,' Ingrid said.
'I can't,' he retorted. 'I'm a New York City boy, born and bred, and I've never had any pets.'
She stared at him in mock disgust, shook her head from side to side, then reached down to him, told him to grip her arm, and then, when he had done

so, expertly pulled him up behind her.
‘Fasten your safety belt,’ she said. ‘We’re both in for a bumpy ride.’
He grinned and embraced her, holding her as his safety belt, then she kicked at the mule, made some dumb, clucking sounds, and the mule turned around and started down the mountain path, carrying them both back to a future they could not yet imagine.
‘I think I’m going to be sick,’ Gerry said. ‘I want transport with wheels.’
She replied by letting her laughter peal like bells through the crisp air, across the snow-capped peaks and shadowed gorges, to the ends of the Earth.
‘You’re some kind of man,’ she said.

POSTSCRIPT

Associated Press Release, August 20, 1988

The major international academic controversy of a few months ago, which erupted when Gerald Remick, notorious son of the highly respected Martin Sydney Remick (b. 1925, d. 1986) – D.Litt., LL.D., F.S.A., honorary A.R.I.B.A., noted archaeologist, writer and, prior to his untimely death, Professor of Archaeological Studies in the Antiquities Department of Harvard University – published his inflammatory book, *The Secret Language of Numbers*, in which, among other wild assertions, he claimed to have proved that Shakespeare was in fact Christopher Marlowe and that the latter, in the company of many other great historical figures, was a member of a secret ‘magical’ society, has now reached it rather piquant finale.

Already expelled from Harvard for what the University officially described as his ‘adamant refusal to conform to traditional norms of behaviour’, the disgraced son of the famous academic has now outraged the academic establishment, not only because of what one learned critic has insisted was the ‘grossly malicious and unfounded historical distortions’ contained in his book on the socalled ‘secret’ lives of some of history’s greatest men, but also because his scandalous assertions about Shakespeare have been offered by one not academically qualified in this particularly complex field.

The controversial Hack of Academe recently fled the United States with his

new wife, one Ingrid Zweig, daughter of the equally eccentric and astoundingly wealthy international businessman and Neo-Nazi, Wilhelm Zweig, whose whereabouts have been unknown for the past eighteen months.

The disgraced Gerald aka ‘Gerry the Drop-Out’ Remick and his German wife are reported to be living presently with their illegitimate child on an island in the South Pacific, privately owned by the father of the latter. According to unverified reports, they are involving themselves in various ecological and spiritual experiments which they hope will benefit not only the island’s inhabitants, but also, at some future date, the whole of mankind.

The distinguished mother of Mr Remick, presently living in New York City, was unavailable for comment.
